# FROGGER

by SEGA®

The popular arcade  
game for the DRAGON 32

SAFELY MANOEUVRE THE FROG TO  
ITS HOME WITHIN THE TIME GIVEN.  
CROSS THE HIGHWAY WITHOUT  
GETTING RUN OVER AND CROSS  
THE RIVER WITHOUT FALLING IN.  
AVOID TRAFFIC, SNAKES, CROCODILES  
AND DIVING TURTLES.

FOR 1 TO 2 PLAYERS. JOYSTICKS OPTIONAL.

**On Cassette £8 each** (including VAT & Postage)

AVAILABLE FROM DRAGON 32 DEALERS NATIONWIDE  
OR ORDER DIRECT FROM

## MICRODEAL

DISTRIBUTED  
ON BEHALF OF  
THE CONASOFT  
GROUP

Dept. 41 THREE ROAD, ST JUSTELL, CORNWALL PL30 3SL. TELEFON 3408

## How to submit articles

The quality of the material we can publish in Dragon User each month will, to a very great extent, depend on the quality of the submissions that we receive from you, our readers. The Dragon 33 computer was launched on to the market with a powerful version of Basic, but with very poor documentation.

Every one of us who uses a Dragon will be able to discover new tricks and quips almost every day. To help other Dragon users keep up with the speed of the development, each of us must assume that we made the discovery first — that means writing it down and passing it on to others.

Articles which are submitted to Dragon User for publication should not be more than 2000 words long. All submissions should be typed. Please leave wide margins and a double space between each line. Programs should, wherever possible, be computer printed on plain white paper and be accompanied by a tape of the program.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your program returned you must include a stamped, addressed envelope.

## Contents

<b>Letters</b>	<b>4</b>	<b>Duckshoot</b>	<b>31</b>
Making more of your Dragon's memory; input/output; the TRACE facility; DREAM facilities; useful memory locations; screen clearance; program correction		It's time for all you hunters to check your sights and test your aim with H Wentwood's Duckshoot	
<b>News</b>	<b>7</b>	<b>Party time</b>	<b>37</b>

Kath and Steve Bain take a closer look at disk drives — from Dragon Data and Cantata — for your Dragon 32

## Editorial

THE DRAGON BOOKED a place in the sun for the first weekend in November — heading for a Californian computer show covered in this issue. US marketing of the machine is now going ahead strongly, and this show is just one part of Dragon-Tano's strategy to spread the word about the Dragon throughout the US. One of the oldest jokes about America is that when it was staked all the nuts started rolling and came to rest in California — a selection on the enthusiasm many Californians seem to develop for *exotic* subjects. This month the Dragon too started rolling, coming to a halt in Pasadena where it took top billing at the Colour Computer Exposition.

This doesn't mean that clans will be appearing alongside the footprints of the stars commemorated forever in cement on Hollywood Boulevard. What it does mean is that the Dragons 32 and 64 had pride of place at the first West Coast Colour Computer fair. But the background to the show is more interesting than the presence of the machines themselves. It began life as a project organised by local users, but the scale of response led to other organisations taking a hand. This is hardly surprising when you consider that a Colour Computer weekend was declared in Los Angeles and Pasadena to coincide with the show.

This level of official interest far exceeds that displayed in the UK for events such as this autumn's PCW show. The 50,000 visitors to this show were not dazzled by the glint from local dignitaries' medals of office — nor did they see their interest taken up so warmly by London's administrators. Californians may indeed have some strange interests. But while there is no official policy in this country on aerobics, microcomputing ranks high on our list of priorities. It would be good to see this high ranking translated into some show-level action.

The PCW show, however, did have a lot to offer Dragon users. The lot, in its demure grey casing, was the only new micro on display, and two add-ons for the Dragon made their first appearance — a Videotex interface and a Color Prodots arm. Adverts of arcade games also found a lot to reward their passion. But quieter moments were equally rewarding — for example, when one member of Dragon Data's staff turned off the arcade game on display in order to talk with a deaf and dumb user via the monitor.

## Making room

DOES YOUR Dragon run out of memory when saving large graphic arrays?

Recently I got my hands on an IBM PC with all mod cons. While reading the basic manual I came across this piece of interesting information. I tried it on the Dragon and it works.

When GETTING a screen image it is not necessary to use a two-dimensional array. The Dragon will quite happily store your pictures in a one-dimensional array. For example:

```
To store an area 60 x 60 using the Dragon manual you would DIMA$(60,60) : GET (0,0) - (59,59)A,5
```

```
The same can be done using DIMA$(180) : GET (0,0) - (59,59)A,5
```

While I don't know the internals, the effect on the memory is clear. Because "A" is an integer (numeric) array it uses two bytes for each element ( $60 \times 60 \times 2 = 7,200$  bytes). The difference between the two methods is 7,200 bytes.

Having done a few tests, I found a fairly consistent ratio of 3:1 between the product of (60 - X) - (Y) - (Z) and the array needed to hold it. For example: (0,0) - (59,59) = 3600:36 = 100

(50,50) - (100,100) = 3600:36 = 100

(0,0) - (12,12) = 144:36 = 4

It is, of course, wise to round upwards, but the saving space will give you room to add extra frames to improve animation, or to overlap frames and reduce the flickering produced by blanking out between frames.

At Healey,  
Dorset

## Corrections 'wrong'

I WOULD like to thank Mr J. Kerry for his letter published in the September issue in which he clarified a couple of points mentioned in my article "Getting to grips with input/output".

It is ironic though that his letter should be titled "Getting it right" when the very first point he made is clearly incorrect — the triggering of the cassette relay is handled by an interrupt, as I stated in

my article. It would seem that Mr Kerry has made the mistake that many novices make in assuming that all interrupts are handled by the MPU; in actual fact interrupts called by the PIA are always serviced by a PIA interrupt which interrupts the MPU.

There are four PIA interrupts — IRGA and IRGB — which service the four interrupt lines, CA1, CA2, CB1, CB2. They must not be confused with the MPU interrupt IRQ which is entirely different. But this is not to say that MPU interrupts cannot be called in addition — they can, quite simply by checking the contents of the PIA. For example: LDA (FF7) CBPA \$74  
BNE + 1  
JNB  
RTS

This short subroutine would call an SWI interrupt, since the PIA IRGA had switched on the cassette relay.

SWI, SWR2, SWR3, are not used by the Dragon and are thus for use by the programmer. An MPU interrupt is also called if the PIA interrupt line is linked directly to the MPU interrupt line; this is how the cartridge IRQ works.

Jim Nicholson,  
Morpeth

## Clarifying TRACE

THE TRACE facility on the Dragon, used as the hardware suggests, can cause more confusion than it seeks to clear.

Any program screen display gets carried in a mass of scrolling line numbers, especially if any HEXYS is involved. This can cause difficulty when deciding where to stop or "break" the run when checking for errors. In my case, these errors always seem to

occur between half and two-thirds of the way through the program.

In desperation, one day I tried: 499 TRACE

500 STOP

It worked! There it was — the display (fixed in this case) and the line numbers at the end of program giving trouble — static for study.

It works in graphic modes too, but you will have to add the relevant SCREEN command if you wish to CONT.

D. Haines,  
Milton Keynes

## DREAM difficulties

HAVING RECENTLY purchased Dragon's DREAM System Accelerator, I had great difficulty in getting the program to record test on tape. Although the program went through the motions, what was recorded on tape could not be read back at all.

Having disassembled the program, I am now able to offer a quick solution.

The problem is that DREAM sets the number of hex 55 leaders to four, which is not nearly enough. The number of leader bytes used is stored at address hex 7485, so all that is needed is to set a larger value to this location then reuse DREAM. The following sequence will accomplish this:

```
CLAMP 208, 7080  
CLOADM "DREAM" (and load the DREAM cassette)  
PORT $F7485, 128  
CLOADM "DREAM", %B6D66  
$H7485, $H7080 (to save the modified DREAM program)
```

A. Jolly  
London SE17

## Memory locations

I WOULD like to point out some useful memory locations, in the manual there is a memory map but that is all.

\$827 — foreground colour  
\$830 — background colour  
\$84 — active colour  
\$86 — graphics mode  
\$88 — count of bytes in a row of graphics  
\$19 — beginning of text  
\$23 — top of string free place  
\$71 — RESTART FLAG. If (\$71) < \$55 then a full cold start will be performed on RESET.

Arthur Nicholls,  
Prest,  
Lancashire

## Clearing a screen

HERE IS a new way to clear a screen row by row.

```
TO 108 I = 1004 TO 1035 :  
FOR L 128 TO 1637 I  
  Printing this will clear the screen blank. To change the colour this is all that needs to be done: Change PORT I, 128 to (green) PORT I, 143 (yellow) PORT I, 150 (blue) PORT I, 175 (red) PORT I, 191 (buff) PORT I, 207 (cyan) PORT I, 223 (orange) PORT I, 239
```

Roger Alexander,  
Dumfries,  
Dumfriesshire

## Leap year solution

MICHAEL HOLLAND'S program Calendar, in August's Dragon User, appears to contain an error — the dates for the month of January are incorrect in leap years. Addition of the following line should correct this fault:

```
325 IF Y4 = INT (Y4/4) AND M = 1 THEN T = T + 1
```

As a relative newcomer to computing, and a great believer in the value for money of the (British) Dragon, your magazine has come as a welcome and useful publication.

J. Woodhouse,  
Aldershot,  
Hants

## SOFTWARE

#### COMMITTEE SOFTWARE FOR THE ORACON 12 ORAC-12 ANTI-BSC, BSCS & MICROCOMPUTERS

## PERSONAL FINANCIAL MANAGER

A suite of three programs to manage your personal or small business accounts. The PFM is an easy to use, menu driven double entry general ledger system which includes the following features:

- User defined data lengths to maximise memory utilisation.
- Typically 100 accounts (expenditure categories).
- Optional monthly budget for each account.
- Account data and transaction data save routine.
- On screen or printed reports.
- Standard or user generated reports.
- Standard reports include:  
Account master data summary  
Total transaction list  
Transaction list by account (e.g. bank statement)  
Current balance on any account  
Performance of any account against monthly budget
- Unlimited transaction data.

**PRICE £9.99** including VAT and post/packing.

## DRAGON HARDWARE

DRAGON 32 .....	£172.00
DRAGON Disk drive + controller + DOS .....	£275.00
DISKETTES — box of 10 .....	£19.95
DISKETTE storage box, lockable (30-40 disks) .....	£18.40
PLASTIC DISKETTE LIBRARY CASE (10 disks) .....	£3.00
JOYSTICKS — pair .....	£15.99
JOYSTICKS — self-centring — pair .....	£19.95
DUST COVER with printed Dragon logo .....	£4.95
PS232 interface .....	£45.00
DATIX D83 computer cassette recorder .....	£29.95
PYE TR3522 cassette recorder .....	£22.50
GP100A .....	£215.00
STAR ST380 80 col, 80 cps, friction, thermal .....	£149.95
STAR DPS50 80 col, 100 cps, P/T, 2.3K buffer .....	£262.95
STAR DPS45 130 col, 95 DPS10 ++ STAR BUY .....	£335.00
SHINKA CTI CP85 80 col, 80 cps, P/T .....	£282.35
PRINTER CABLE .....	£15.00
THERMAL PAPER (roll for STX80) .....	£5.50

All our prices include VAT and delivery to UK mainland. Export customers add 10% to cover postage (small items) or ask for a quote for larger items.

Please send payment (cash/cheque/PO/Access) with order to:

**JUPITER COMPUTER**

## WORD PROCESSOR

Fed up with game playing??? Turn your Dragon into a word processor for only £17.95. Our WP is menu and cursor driven. Main menu options include:

- CREATE new document
- EDIT existing document
- SAVE document on cassette
- RETRIEVE document from cassette
- VERIFY that document has been saved correctly
- PRINT document
- RENAME document
- TAPEPRINT prints all documents on a tape

EDIT/CREATE features include character and byte delete, substitute, shift lock, auto repeat, auto scrolling. PRINT features include right justify, line width up to 255 characters, multiple copies, user definable left margin, save of print format with document and user definable control codes enabling any printer to be used.

**PRICE £17.95.** Disk version available soon £17.95

## DRAGON SOFTWARE

### MICRODEAL ALL AT £7.95

SHUTTLE — Space shuttle simulator  
THE KING ++ FROGGER ++ CUTHBERT GOES WALKABOUT ++ BACKSLAMMON ++ GOLF ++ TALKING ANDROID ATTACK ++ MOROCCO GRAND PRIX ++ GALACTIC AMBUSH ++ COSMIC ZAP ++ ALCATRAZ II ++ SPACE WAR ++ PLANET INVASION ++ PHANTOM SLAYER

### LATEST MICRODEAL RELEASES!!

CUTHBERT GOES CROSSING ++ CUTHBERT IN THE JUNGLE ++ CRAZY PAINTER ++ INTER GALACTIC FORCE ++ KEYS OF WIZARD

### NEW MICRODEAL RELEASES AVAILABLE

SHORTLY — please for availability!!

DEVIL ASSAULT ++ PINBALL ++ SKRAMBLE ++ SPACE FIGHTER ++ DANGER RANGER ++ SPACE RAIDERS ++ GALAXIANS

### Other Dragon Software:

Chess (cartridge) £24.95. Hi-res character set, £5.95. Lethalizer: Samurai Warrior/Tyrant of Athens, £5.95 each. Computers: Dragon Magic 1/Dragon Magic 2, £5.95 each. Quark Data: Space Crystal, £5.95. Castle Software: Drone, Dragrunner, Gascoast, Cave Fighter, £5.75 each.

**SPECIAL OFFER: 10% DISCOUNT ON THREE OR MORE CASSETTES.**

# Dragon 64 to enter shops this month

## Viewdata interface available

THE WAIT for the Dragon 64 is over — the new machine will be in the shops in November, along with the OS-9 operating system.

The 64 has three different modes. It can operate as a 32 (ensuring full software compatibility), as a 48 (with 14K going to the Basic interpreter), and as a fully soft 64.

In addition to Basic, Pascal and C can be used on the 64. Third Data Systems will also be offering the modular language Mumps on the 64 — at about £180 including utilities software and a screen editor.

The new micro, which comes in a grey case the same size and shape as the 32's, also features an RS232C interface. This makes it compatible with a wider range of printers and other peripherals such as modems.

Dragon Data is aware of the need to provide an upgrade service for 32 users. The plan is to offer various packages enabling this at the beginning of next year, if not earlier.

The 64 costs £225 and will be available through the usual Dragon dealers, including Radio and Electric. But the cost of the disk-based OS-9 System has not been decided as we went to press.

OS-9 gives users a range of business applications, and packages such as Synacalc will be available — stock control, accounting and spread-

sheet analysis will all be possible.

As Richard Madras, Dragon Data's marketing director, commented, the combination of the 64, OS-9 and Drive gives the company "the means to enter other markets". He is sure Dragon Data's move upwards will be as successful as its entry into home computers.

The Dragon 64, software compatible with the 32

A VIEWDATA interface for the Dragon was also displayed for the first time at the PCW show.

It gives a 40 x 24 display with upper and lower case alphabets, and block graphics in green and black or white and black on the Dragon high-resolution screen.

The networking software allows you to talk to Micronet. Postal and other viewdata systems. The software includes facilities to print pages, write mailbox messages and read and save pages to tape.

With the interface, software can be downloaded, including routines for other micro-entries in Microsoft Basic.

The interface plugs into the Dragon cartridge port and autoturns.

Microcomputer Resources is manufacturing the interface and Prism will be its distributor.

It is expected to sell for about £60, or for £120 as a package including modem — although special offers may be available from Micronet when it offers the service.

## Games on the way for Christmas

PRODUCERS OF software for the Dragon took the chance offered to them by the recent PCW show to show off their latest wares and give us a taste of what to expect for Christmas and in the New Year.

Market leaders Microdeal put on one of the most impressive software displays at the show.

Games on show included: Cuthbert in the Jungle and

Cuthbert goes Digging (follow-ups to the successful Cuthbert Goes Walkabout, Crazy Painter, Intergalactic Force (a game based on Star Wars), Keys of the Wizard (a text adventure), Danger Ranger, Scramble, Eight-ball pool, Football, Devil Assault, Dragon Hawk and Rainbow Rider, an editing program.

Some of these have just been released; the others according to Microdeal's Alan

Hobbs, will be available in November.

Like Microdeal, Dragon Data too is expanding its software catalogue in time for Christmas.

New arcade games we can expect to see by then include: Cosmic Clones, Moon Hopper, El Bandido, Jump Jet and Starfighter.

Salomander Software also has a number of programs coming out in time for Christmas.

mas.

There's good news for Dragon users interested in the mystery of Franklin's Tomb. The third part of this trilogy — following on from Franklin's Tomb and Lost in Space — is Fairy Business, which should be out in time to be included in Santa's list of goodies.

November will see the appearance of Lazer Zone (a Dragon version of the Vectron game) and Filing System.

## Wessex expands your Dragon

IF YOU'VE been wondering how to use cartridge software and disk drives at the same time, Wessex Microcomputers has the answer.

Its Wyvern expansion box also provides facilities for memory expansion and instrument control, along with an IEEE connector.

With the box, the page

mode-memory management logic can be poked to access an external block of up to 64K of memory or mixed input/output functions.

Wyvern, designed in co-operation with Compuserve, plugs into the cartridge socket and costs £89.50. Other additions expand the range of things you can do with the

box.

Games and Computers is also offering an I/O board allowing your Dragon to control external devices.

Its MXT I/O controller slots into the Dragon's cartridge port with a base to provide firm support, and can control up to four devices.

Two models are available.

one at £49.95 with four switches and one at £29.95 with two switches and two TTL lines which electronics experts can put to their own use. Both models come with a manual explaining their use.

The controllers can be used in the home or office, for example operating central heating or a burglar alarm system.

**MST ... MST ... MST ...**  
**CASSETTE BUSINESS SOFTWARE**  
**for DRAGON MICROCOMPUTERS**

Buy any TWO cassettes at £11.95 EACH volume  
 and get the **MST BONUS DISCOUNT** (see below)

- MST Home Accounts** £11.95 (inc)  
 Display your household budget estimates and actual monthly results. Automatic computerised system pays over 12 months. Printout copies of full financial monthly statements.
- MST Child** £11.95  
 Super spreadsheet. Present company details on 20 x 21 spreadsheets. PRINT IF ... ? projections and calculations. Select format for screen or printer and multi-user mode.
- MST Database** £11.95 (inc)  
 Easy-to-use database filing system with cards, indexes, keywords etc.
- MST Investors and Statements** £11.95 (inc)  
 Points supply methods and accounts—in a display. Download and update VAT calculations on invoices. Customer/Trade address storage. User defined messages at foot of documents etc.
- MST Stock Control** £11.95 (inc)  
 Products stock-inventory and reorder reports, stock lists, stock turnover file.
- MST Business Accounts** £11.95 (inc)  
 Goes up to date Order/Invoice details and summaries on hard copy printouts. Other reports include Transactions List, Bank Summary, Account Search etc.
- MST Mailer** £11.95 (inc)  
 A formatted, postpaid which prints, selectively, formatted address, postpaid labels by Transfile or Record Forge. Search and Print option. Screen Records etc. A beautiful program.

Each program comes with descriptive booklet, operator notes and sample printouts before acceptance. **Mail-free file service.**

**Available from selected BODYS stores**

Customers who buy 2 or more BODYS cassettes will be rewarded with

# Flex option for Dragon

DRAGON USERS are going to have a choice of operating systems — while Dragon Data itself has opted for OS-8. Microcise will be offering Flex.

Flex is a longer established system, with more applications software available. But OS-8 offers the possibility of multi-tasking.

However, Eric Brooks at Microcise argues that the lack of multi-tasking is not a problem. For 1983 his company is already offering Flex on the Personal controller which is used for Comarc drives reviewed in this issue.

These drives are available in single-sided 40 and 80-track formats, and double-sided 80-track. Comarc is already working on dual-siding drives placed side by side.

Comarc is not afraid of the challenge from Dragon Data. Chairman Don Bollen commented that Comarc will manufacture 3,500 drives before Christmas — "and we intend to sell them".

Microcise intends to be offering Flex on Dragon Data's

Comarc chairman Don Bollen

own drives by the beginning of November, again at about £50.

A range of applications software will also be available then for both systems, including Pascal and utilities such as Dynacalc and Dynasort.

Microcise is already offering an upgrade service to £4K for 82 users.

The company also intends to enhance the Dragon's screen display. Screen upgrades range from an 80-column card to an option giving a full display of 68 by 28 characters.

# Dungeon enters software business

THE DRAGON Dungeon has gone into the business of selling software for the Dragon.

The Dragon's adventure specialist, Mike Morrice, has been busy writing five of their first six releases, and one game, Crystal Chalice, is tipped to be a top-seller.

It is a classic text adventure but relies on computer intelligence rather than the elements to provide play challenge.

The sword and sorcery scenario creates memorable characters which will reappear in the sequel Return of the Wizard, later this year.

The Temple of Zoro, a science fiction adventure involving espionage on an alien planet, has Star Wars qualities which could make it popular.

Eight to 16-year-olds will have to battle against fire, flood and 48 lethal guardians.

in search of Merlin's treasure in the Treasure Tomb.

Giant's Castle is designed to give children in the seven to 11 age-group a taste of adventure. The fights with giant creatures are won or lost by answers to general knowledge questions.

Melias Maze is aimed at the same age group. In it, the player rolls on a good fairy to steer him or her clear of magic holes and other hindrances in the maze.

Mark Jones, 13, of Nottingham, designed Maths Trek, the only game not written by Mike Morrice in this first group of Dragon releases. It is designed to test mathematics using a Star Trek type game.

The Dragon's adventure range will cost £7.95. Junior and educational ranges are priced at £5.95.

## EDUCATIONAL SOFTWARE DESIGNED BY EXPERIENCED TEACHERS

**THE TIGER I.Q. TEST** £7.95  
 Test your own I.Q. (Intelligence) and practice for job selection tests. Free verbal, numerical and visual abilities are tested to the full in 100 format + 11 tests (minimum 30 minutes). Totally high resolution. Final 11p score and explanation plus correct answer sheet.

**THE TIGER GRAND PRIX** £7.95  
 A comprehensive educational package: The Tiger Grand Prix comprises lessons in Maths, English and General Knowledge for all ages (7-16+) and utility whilst on play. Over 500 original questions and answers. Fun Quiz and lesson material for adults too. (Supplied on a £10 cassette full of software. Jingles not included). We are working on an additional module (we will allow you to use 'The Tiger Grand Prix' as a teaching aid for any age, ability and subject).

**PLANS: MISSILE DEFENDER** £5.75  
 Five adaptations of 'Missile Command'. Save the world if you can! (audio graphics) and (sound). Continuous score, laser energy, etc. (Detailed scoreboard after each game). Jingles not included.

More games now under development at The Tiger Laboratories. Watch this space!

\*\*\* PLEASE NOTE \*\*\* Your entertaining education or games software for cash reward.

Order and report enquiries welcome.

# BASIC IMPROVEMENT PROGRAMS

from  
SPECTRUM PROJECTS

**BASIC AID** - an indispensable help if you write or modify BASIC programs. Speed program entry through the use of single and control key inputs of 40 common BASIC commands plus Automatic Line Numbering, Merge and Move commands relocate, insert and remember blocks of code in any part of the program and resolve all branching references in the changed sequences. Redefine any or all keyboard commands and save your most frequently used command definitions for later use. BASIC AID is the programming tool that saves valuable time and effort at only \$49.95 US.

\* \* \* \* \*

**THE STRIPPER** - a machine language utility designed to cut the size of BASIC programs for run time efficiency. All remarks in a program are removed and any branch references to the lines are changed. Individual commands are packed into multiple statement lines where possible for dramatic savings of memory, and all unnecessary spaces are deleted from the code. THE STRIPPER can squeeze more performance, data and program from your machine for only \$19.95 US.

\* \* \* \* \*

## SPECTRUM SPECIAL

order both programs and save \$10.00 US

# Dragon spreads its wings wide

*A look at just how far overseas the network of Dragon users has spread.*

**SALES OF THE Dragon computer are booming all around the world — and with the increase in sales has come a big jump in the number of users wanting to keep up with the latest news about their machine.**

Meeting other users and swapping information about the Dragon is easy for people living in the British Isles — after all, the manufacturer is based in Wales, there are numerous computer clubs to join, and there's even an independent magazine based in London and devoted to the Dragon (that's us, in case you didn't guess).

But for Dragon owners overseas it's been a different story. Often they find themselves with their Dragon, a manual and little else. However, some attempts have been made to reach these "outposts" of Dragon owners. *Dragon User* has gone international and *Dragon Data*, the manufacturer of the computer, runs a service to put users in contact with each other.

But now, it seems, Dragon owners overseas are taking things into their own hands: large numbers are getting in touch with established clubs in Britain. Two of the country's largest clubs, the *Dragon Owners' Club* (run by Dragon Dungeons) in Dorsetshire and the *Dragon 32 Users' Club* (run by Games and Computers) in Dorset, can boast a truly international membership.

Says John Richardson, of the *Dragon 32 Users' Club*: "It has amazed us how many people have contacted us from overseas. We have about 1,400 members altogether;

John Richardson (left) and Peter Woods ... both their clubs for Dragon users have extensive overseas membership.

of these, about 160 are overseas." John says that "virtually every European country" is represented in the club, with the largest number coming from the Scandinavian countries, "Island in particular".

Peter Woods of the *Dragon Owners' Club* has also had a lot of Scandinavians joining up. He estimates that about 70% of the club's overseas members come from Scandinavia.

## Strangest places

The *Dragon Owners' Club* also has some members in what may seem the strangest of places. There are, for example, about a dozen in Saudi Arabia. No, they're not wealthy oil sheiks filling in their spare time with a Dragon — they're Britons working there who couldn't bear to leave their Dragons at home. There's even an order flying the Dragon flag on the Falklands.

Other overseas members come from such exotic places as Malaysia and Hong Kong. Peter Woods explains: "They come over here as students, get a Dragon while

they're here and then go back and spread the word."

Interest in British clubs has also spread in the other direction — across the Atlantic. Both clubs now have an American connection — the Los Angeles Colour Computer Users' Group. The idea behind this link is essentially for users of the Dragon and the work-alike Tandy Colour Computer to swap information, but the Dragon's release in the States will surely stir up more interest in Dragon clubs.

There is really Method, too, of even more European interest. Once again, the Scandinavians took suit to lead the way.

A spokesman for Informasjonssystemer, one of Norway's major computer retailers, told *Dragon User* of an upsurge in Dragon sales in Scandinavia. He said that since March, 2,500 Dragons had been sold in Norway alone and added that in the month after his company moved into the Swedish market sales there had reached 1,500. The company expects sales of between 10,000 and 15,000 this year in those two countries and Finland.

*Dragon User* knows of no clubs in Scandinavia on the scale of those in Britain, but it can only be a matter of time before we hear of a "Scandinavian Dragon Users' Club" being formed.

The situation in central Europe is pretty much the same. In France, for example, the Dragon is rapidly gaining in popularity — *Dragon Data* (France) reports sales of 5,000 so far and expects to sell at least 20,000 this year — but there are no known clubs. ■

**Derbyshire:** *Dragon Owners' Club*, *Dragon Dungeons*, PO Box 4, Ashbourne, Derbyshire — publishes *Dragon's Teeth*.

**Devon:** Ian Chappardell, *British Dragon Owners' Club*, 22 Brookside Court, Hinton, Devon — meets every Saturday afternoon.

**Dorset:** *Dragon 32 Users' Club*, Games and Computers, 31 North Street, Wareham, Dorset — publishes newsletter.

**Essex:** Doug Bourne, *Dragon Independent Owners' Association*, School House, Newn Road, Rayleigh, Essex — publishes *The Dragon's Tail*.

**Lancashire:** Melvin Franklin, North-

## Dragon clubnet

**West TFS-66 Users' Group**, 48 Cornhill, Wetheroughton, Bolton, Lancs — growing number of Dragon users, meets monthly at Innis near Manchester and publishes newsletter.

**Lancs:** 68 Moss Group, 41 Peabworth Road, Harrow, Middlesex — publishes 68 Microphone and meets on the fourth Tuesday throughout the year in the Regent's Park Library, Robert Street, London W1P, all 6800 owners welcome.

**Staffordshire:** Tony Beckedd, Tame Computer Club, 57 Adams Close, Tam-

worth, Staffs — an all-user club including 16 Dragon owners, meets fortnightly.

**Wales:** *Dragon Users' Club* — publishes *Step Press*, *Dragon Data*, Tandy Industrial Estate, Margam, Port Talbot, West Glamorgan.

**Wiltshire:** R Gould, 39 Gullenne Road, Stratton St Margaret, Swindon, Wills — interested in forming UK 32.

**Scotland:** David Anderson, *Scottish Dragon Club*, 1 Walker Street, Edinburgh — regular newsletter.

**South Africa:** Ian McCall invites other SA Dragon owners to contact him at 26 Elmwood Road, Rondebosch, Cape Town.

 DELIVERED AT THE LOWEST PRICE IN THE WORLD

# Winter brings a whole new world of games

Software reviewer John Sariven abandons the outdoors to start exploring micro-worlds

AS WINTER APPROACHES and icy winds start to howl across the country, many people are discouraged from venturing too far from the comfort of their homes. More people come in from the cold to seek excitement at the keyboard. What better thing could there be than to remain in the warm and dry while your Dragon leads you to explore the rest of the universe from a warm armchair?

I sometimes wonder if it's always a good idea to seek escape in different micro-worlds. In the not too distant future video discs will be combined with computers to provide a reality environment in which we are not mere passive observers, as with TV and films, but active participants who can control our own destiny. Perhaps the Brave New World of "beliefs" as well as movies is closer than we imagine. I can imagine a scene where all our experience is obtained from some processor-generated video, no longer any need to visit casinos — the machine takes us there; no need to fly — the simulator does it for us. The ultimate conclusion is that we won't need bodies — the internal, cerebral experience will be enough.

If you think I am overrating the danger, then think back to the last time you became so involved with a program that time, meals and other people disappeared totally from your mind. Most of my friends who use computers are pleased to escape from their ills in the country or on to the beach, but there are one or two who show the danger signs: glazed eyes, computer language creeping into normal conversation, excuses as to why they can't come out in the evenings. Still, I expect they said the same about Cason when books first appeared!

## Varied quality

This month's selection includes several programs to produce glazed eyes, though not all for the same reason. As usual, the quality varies enormously, if only the software improved at the same rate as the packaging.

First on my screen was Space Shuttle from Microdeal. Consisting of a more elaborate version of a flight simulator, the object is to pilot the shuttle through a complete mission. The display initially

shows a weather report — side winds on landing can create problems — and then countdown begins. The screen now shows a control panel of windows, with a bewildering array of instruments below and status reports at the top. The view outside is of clouds that soon give way to stars as you gain in altitude.

At this stage you leave the launch rocket and have some control over the shuttle. Use of the joystick enables left/right and up/down movement as you steer towards the correct orbiting position. Things increase in complexity at this point as you attempt to rendezvous with a satellite. As well as the joystick, you have to alter the ratio strength to change your velocity. Once you are close to your target, the doors have to be opened, the robot arm extended, and the satellite placed neatly in

the cargo bay. Surprisingly, this is the easiest task of all.

As the doors close, you can fire forward thrusters to begin your descent through the atmosphere. The meters shut off and you control the final glide using only the joystick. Instruments are necessary in the initial stages, but soon the runway appears through the window and the landing can be achieved visually.

After you land successfully — or crash — a debriefing report tells you where you went wrong during the mission. As you are a trainee pilot, each stage has predefined limits for success — for example, you are not allowed to attempt to put the shuttle into orbit at a height of 10 feet above the ground. If you are outside the limits or you take too long, the stage is stored automatically and the next begins. Points are awarded according to your skill at each manoeuvre.

## Well thought out

A well thought-out game, Space Shuttle encourages you to reattempt the difficult sections and improve on your score. The game is reasonable value at \$8, the instrumentation clear, and the outside view about as good as can be achieved on a Dragon.

The packaging includes a 16-page training manual that explains each stage clearly and gives assistance in control movements. The packaging is rather strange — a block of expanded polystyrene the size of a video-cassette holds the cassette and the booklet. Once you take off the clear wrap and the paper cover, there is no cassette case, and you either store the cassette on its own allowing dust to enter, or wrap it up in the large chunk of white plastic, which looks unhygienic.

A firm that has gone for mini video-cassette cases for their packaging is Premier Microsystems of Croydon. It produces a range of games and educational software that caters for all tastes.

Maths Games contains four programs to improve mental skills. They all follow the same format, simple numbers appearing on the screen that have to be operated on in the head and the correct answer entered. The addition program, for example, shows number sets like 2 + 5 + 7 + 3. ▶

## DRAGON 32 OWNERS

AVAILABLE  
NOW

Now you can buy a professional disk system to turn your Dragon into a real computer!  
**NOW DOUBLE-DENSITY DELTA DISK SYSTEM**

THE DELTA DISK SYSTEM gives  
you ...

- An affordable disk system
- Powerful DELTA disk commands — not tight
- Random, sequential and indexed file-handling
- Simple plug-in to DRAGON — unlike other systems that use TWO HARDWARE MODES needed to run DELTA!
- Easily expandable 100K to 1.4 megabyte storage
- Full range of business, utility and games software close to release
- The price you see is the price you pay — NO HIDDEN RAM upgrade costs
- Uses most 1K of soft-RAM as DELTA is built on EPROM

Dealer and Overseas orders welcomed

Drummond populus in the UAE

4 + 12 + 8 for a few seconds . . . These disappear and the correct answer has to be input. If correct, a flash set of numbers appears, plus an extra number, as this is a test of memory as well as mental agility. Although I have reservations over the educational value of such programs, it certainly provides plenty of practice. I feel that it wouldn't appeal to these children who would benefit from it most, however, as there are no complementary graphics. The multiplication program is a lot better, as it shows a number of dots in two boxes that have to be counted before being multiplied together. I also liked the division program, which gave alternative answers to a problem, and also allowed a lot longer to work out the answer.

Although Dragons aren't common creatures in classrooms, these programs could offer extra help to parents. It's a shame that the displays could not have been livelier — children are more likely to retain knowledge if it's acquired in an enjoyable way, and these programs, although efficient, tend to be a little boring.

## Spelling confusion

Spelling from Premier attempted to confuse me by including a maths program first. Basically it's simple four rules test, it displays the figures in a large box and put ticks or crosses next to the answer. There is no attempt at graphics, and it wasn't much fun to use. This was followed by the main program, Spelling Test. Spelling programs always present difficulty in presentation. Either the word has to flash on the screen, or there has to be an accompanying sound track of the word, or alternative spellings have to be shown. Premier have chosen the last route, giving a choice of four spellings for each word. Difficulty levels vary from 1 to 6, easy words being history, people, etc, and hard words begin at the level of ecology, rejuvenate, etc. The words are held in data statements, so a parent or teacher could substitute any words, including foreign or scientific words as necessary. While not being tremendously impressed with the program, I found it perfectly competent and worth considering if practice in spelling is considered necessary.

## All about plants

Plant Ecology from Premier tackles a learning situation in a much better way. After teaching about energy levels, sunlight, soil fertility, etc, the format is that of a "Kingdom" type game. The environmental conditions are shown in a table, listing sunlight, temperature, rainfall, competition

and wind. Beneath is shown your condition, from roots and leaves, through flowers and seeds to the number of new plants produced. You can supply energy to different parts of your plant through the seasons, and the object is to survive and produce as many new plants as possible. Natural disasters occur, such as weed killer spills, as well as more pleasant happenings like surprise gifts of fertiliser. Each strategy employed also has a display of your plant, complete with the roots, leaves, etc, that you possesses at that stage. This program would serve up a botany lesson, and provoke discussion if used with a group of children. I'm not sure how much pure plant knowledge would be acquired using this program, but reasoning skills would be sharpened as different approaches are tried.

Adventure Plus is the only adventure game from Premier. It is a text only version that allows you to explore a house picking up various objects. The room descriptions are rather brief, and though some of the problems take some time to solve, it does not compare with Dragon Data's range of machine code adventures. The vocabulary it recognises is rather limited, and there are irritating requirements such as having

Spider better than it looks

to type "go north" in full each time. Although I wasn't very impressed by this game, it was no worse than the Microdeal series and could well appeal to adventurers in search of fresh ground.

## Enter the spider

When I first loaded Spider, the only arcade-type game from Premier, it didn't look too promising. The display is very simple — an eight-sided web, two spiders and a fly. The object is to move your spider (the large male one) over the flies to satisfy your voracious appetite. Unfortunately, the female spider has an even greater hunger for you! Female spiders being what they are, they don't have much use for you afterwards, and you disappear from the screen. You also disappear if you don't eat enough flies. As I played the game, it was clear that it was better than I had feared, but it is still not really up to the impressive standards.

My favourite program from Premier was Critbage. I have not seen any versions of this traditional card game for any other machine, and it was surprisingly good. Briefly, the game is as follows:

Each player is dealt six cards, of which

two must be thrown away. The next card in the pack is turned up to show its face. The four discarded cards make up the "crib" which is placed to one side. Using the retained cards, the players take it in turns to place cards in a pile, adding up the value of the pile all the while. Runs and doubles score points, as does making 15 or 31. The total must not come to more than 31. If it does, then the dealing starts again. When all eight cards have been played, the players try to make 15 from their own cards (including the upturned card) on the pack. They take it in turns to add the crib score to their own. Scores are usually kept on a wooden board with holes in for matchsticks. The winner is the first person to travel his or her matchstick around the board.

The display is very clear, with the cards shown along the top of the screen, and the reaction times are fast. Although not as much fun as playing in the back room of some country pub, this is an enjoyable game and what's more, it was played fairly. Critbage seems to bring out the worst in humans! Perhaps this signals a return to traditional pub games on computers. I shall keep my eyes peeled for the first Shove-Ha penny game on cassette.

## Making music

Although the Dragon has a respectable number of commands to access the sound chip, Dragon Basic does not allow a large number of different effects. It is necessary to use machine code to exploit the full potential of the machine. An alternative solution is to use a program such as Composer from Microdeal, which effectively extends Basic by allowing you to enter complex melodies into DATA statements. In this way, harmonies can be written, and quite complicated melodies incorporated. There is a selection of tunes already prepared as a demonstration, and the result is impressive.

The melodies that you enter are compiled into machine code by the program, and the machine code file saved separately. This is how music can be used in your own programs without the need for complex routines or extra memory. There is an accompanying 28-page booklet that goes into considerable detail. This is just as well, because although the program is menu-driven, it is still fairly complex and needs a lot of work to achieve results like the demo tunes. The price is a little high at £15, but if you want a versatile sound synthesis system without expensive additions, this will probably be the bit.

Morocco Grand Prix: not 'addictive'

## SHUTTLE SIMULATOR

FLY LAUNCH FLYER LAND

0000 0000 0000 0000

*Space Shuttle is a well thought-out game from Microdeal.*

■ Been released under the banner of Salamander Software, A fast-moving machine code game needing one joystick, this consists of a grid of approximately 27 x 17 lines, down which move search squads (this part is similar to Caterpillar). You control a base over the bottom half of the screen and attempt to destroy the squads before they reach the bottom of the screen. If you remain in one place for too long, U/V rappers will line up on you and fire plasma beams. Other obstructions are caused by pots appearing in your path. Although I found it a little tiresome, some of my friends think it's great fun and it's very popular among arcade freaks. Apparently this is one of the best selling games in the States, if that's any recommendation.

### More arcade games

Yet more arcade games seem to be streaming out of Microdeal. The latest releases include "The Official Frogger" under license from Sega. The graphics were a little disappointing, being rather on the "chunky" side, and as most people have the equivalent game, it's probably appearing too late to do well. As usual, you have to guide frog up the screen avoiding traffic, snakes, crocodiles and diving turtles. If you like the game and don't have a version yet, then this does have the option of fast and slow games, and joystick or keyboard entry, and you can always say that yours is the version all the others are based on.

Microdeal have also released another Tom Mix game — this time it's his version of Golf. You are allowed to choose clubs, direction and when putting, distance. There are various obstructions in the course such as ponds and bunkers, and the green shots are shown to a larger scale. I still prefer Salamander's version to this one, and the graphics are rather disappointing compared to most games that originate from Tom Mix.

A game from Microdeal that I prefer to the Salamander version is Grand Prix. In Microdeal's program, it is the Moroccan race track that is used. Rather than show you the whole circuit, you only see the road just in front of you. As with some arcade versions, you get a bird's-eye view as other drivers scorch about in front of

you or slither into you from the side. Control is by means of the joystick, and it needs a very gentle touch to avoid the other traffic. In spite of the well-defined cars and the smooth scrolling, I found it wasn't really in the addictive class, and certainly not as good as the latest racing simulators that are appearing in arcades at the moment.

### Cuthbert entertains

A game that was rather more entertaining is Cuthbert Goes Walkabout. Apparently, Cuthbert finds himself on a lunar landing post, waiting for the Federal Courier to arrive. His job is turning on lights at the corners of a 7 x 5 grid. Invading Microdeans wander around after him. Each square he walks round lights up, and the object is to light up all 35 squares. As you are given five Cuthberts, the game isn't too difficult, but each fresh screen contains more Microdeans. If you are quick, you can jump over them, but if you're too close to the edge, you disappear off the edge of the screen. This is an original idea skilfully executed, and is my favourite from the selection of new Microdeal programs.

### Four-in-one

Dream Software is a new name from Northern Ireland. They supply a tape called simply "Dragon 1" that contains four programs. Golf presents a nice 3-D view of a hole at the start, but from then on, it's text only (plus sounds of the ball whizzing through the air), which is a disappointment. You can select clubs and putter strengths, but the game isn't too interesting to play. Poker uses low-resolution graphics for the display, but is a simulation of a gambling machine rather than a game of cards. As you play against the machine, and there is hardly any skill involved, there seems to be little point in this type of program, but I suppose it's cheaper than a real machine. Corned Beef (that's how they spell it) does not actually play the game — it merely uses the screen to display the pieces and checks to see if someone has won. Unfortunately it's not mug-trapped very well, and crashes if you put too many pieces in a column, or if you accidentally enter a letter instead of a number. Four Machine has much better graphics, using the high-

*Pac-Man is a more advanced version of the popular Pac-Man.*

resolution screen for the display. You have \$4 at the start of the game, and there is a hold facility. Again, my comment would be why bother playing a fruit machine with so much chance of winning or losing? The cassette is only £4.95, but I would rather pay twice that for one good game than four weak efforts. The only use for it might be during a party when you're bored with pulling crackers.

Last month I was particularly impressed by a program called Ninja Warrior from Programmers' Guild. This month I have been looking at two other games from this new software house. The first is called Pac-Man and is loosely based on Pac-Man. It is considerably more advanced, however, as you can lay mines in the path of your pursuers. The mazes increase in complexity as you progress, and once again, the game is fast and smooth in action. You can use either joystick or the keyboard for control, and up to four players can use the game at one time. Although it lacks the originality of Ninja Warrior, it is good value and is more interesting to play than a standard Pac-type game.

Protecter only permits the use of the keyboard for control, and in fact uses six separate keys to move your craft. The first display consists of a menu of options and explains the use of the controls and the scoring system. As this game starts it is seen that this is a version of Defender, complete with aliens kidnapping innocent citizens, smart bombs and mutants. There is a display at the top of the screen to show the approaching hordes from both sides, and you can fly in either direction. This is a reasonable version of Defender, but I still prefer their "Ninja" to the more derivative games.

### Room for originality

Perhaps there is a lesson in this. Arcade manufacturers rarely expect a game to last more than six months unless it's really special. In the micro marketplace, there is always room for originality rather than endless copies of old games. Larger software houses are beginning to realise this, and as well as programmers they often employ "sales people" to think up original programs. It would make a pleasant change to see even more of them each month. ■

Competition. Dragon Data's disk drive (left) vs. Curmusa's version (right)

# Disk drives: how they measure up

*Keith and Steven Brain give you the lowdown on disk drives for the Dragon*

AT LAST! DRAGON Data has launched its long-awaited Dragonidos disk system to go battle with the upstart single-density Premier Delta system which has been available for some months. However, it is clear that the company is not going to have things all its own way as major disk-drive supplier Curmusa has teamed up with Premier to enter the ring with a directly competitive double-density version of Delta's coupled-to-one-of-its-own-drives. So let's take a look at what each of the systems offers and how they stack up against each other.

## The hardware

The overall construction of the systems is very similar, as both consist of a ROM cartridge containing the Disk Operating System, which is linked by ribbon cable to a double-density spring-loaded drive offering 170K of storage space. This similarity in approach is hardly surprising in view of the limited memory available on the Dragon 32.

The DOS used by Curmusa is a double density version of the Delta system designed by Premier Microsystems which is being produced by Curmusa under license. Although smart games cartridges do fit the port reasonably easily these larger boxes (18 x 11 cm) tend to flap about alarmingly and the tenuous nature of the link between the ROM cartridge and the slot is rather annoying. It is a pity that there seems no easy way to make a more solid anchorage

point on the Dragon and thus prevent the risk of accidental separation, with its dire consequences to both your data and your hardware.

Connecting the ribbon cable on the Dragon Data system is no problem as the plugs at each end are of different type and coloured so that they cannot be inserted the wrong way round. On the other hand, the Curmusa system uses symmetrical connectors, so care must be taken to insert them correctly.

The disk drives of the two systems look very different, in spite of the fact that they are both of similar design, as whilst Curmusa has squeezed its drive into the minimum size of case Dragon Data has opted to provide a much larger box which has room for internal expansion to a second drive.

Both ribbon cables already have the plug for a second drive attached but adding a second Dragon drive also involves making connections to the internal power supply and is listed as a "dealer-fitted" option.

The Dragon Data drive has the usual "jack-in-the-box" spring-loaded locking

door to the disk whereas the Curmusa drive uses a camper arrangement whereby a small lever is turned to lower the read/write head and spin the disk, which is retrieved by simply pulling it out with your fingers.

## Documentation

The manual for the Curmusa system is essentially based on the excellent document produced by Justin Johnson and Peter Rixson of Premier for their original single-density Delta system. It is comprehensive, meticulous in its approach, and "absolutely first class".

As the Dragon disk system has only just been launched we can perhaps forgive the "temporary" appearance of "An Introduction to Dragonidos" by Alan Mayer (after all the cover does indicate that this is a preliminary version) but there seems to be no excuse for the need to include four pages of errata sheets for such a slim volume. Surely you should proof-read manuscripts carefully before you print them, rather than expelling the user to set to work with pencil, scissors and sticky tape. Adequate instructions are an essential part of any product and it is a great pity that Dragon Data (like so many other computer manufacturers) has fallen down on this side of things.

Whereas it has obviously been assumed that the new Delta owner will probably be a novice, with little or no experience of disk operations, the Dragonidos manual ►

assumes much previous knowledge of disk systems and is far too brief. Dragon Data gives some limited exploration of the all-important file handling techniques, but its effort pales into insignificance beside the very detailed treatment and complex worked examples of different types of applications provided by the Cumana Primer editor.

## Operating commands

To compare the capabilities of the two operating systems we will look at the commands under a number of different headings. Although different words are used for a number of the fundamental system commands in the two DOS many of these have essentially the same action, and they have therefore been placed opposite each other in the comparison table.

### Disk commands

OFFSESELECT allow you to log on to further drives. Before you use a disk you must format it to the required specifications. With DragonDOS there is a single command (DISKINIT) which can include drive, sizes and tracks parameters, but Delta provides this into two commands. COMFID is extremely versatile, as it also includes sectors/track, step rate and data rate, allowing you to configure the system for any type of drive, and once the configuration is set INIT will format the disk.

With DragonDOS the only indications that formatting is in progress are the rhythmic sounds from the drive, but Delta also gives a visual display of progress by printing up each track number as it is formatted. Other useful features of Delta are that it will not format any disk with data already on it without confirmation from the user that this is correct, and that you, if you put appropriate parameters into COMFID you can read single density Delta disks on the double density system.

DIR gives a directory of the names and types of files on the current disk and their size, together with a report of the amount of disk space remaining. Delta differentiates between Basic (BAS), machine code (MCX) and data (DAT) files, and specifies the size on 'domains' (disk byte sizes). DragonDOS describes machine code files as binary (BIN) and disk space in absolute bytes and it also automatically produces back-up (.BAK) files. This means that if you save a file with an existing filename it retains the old copy until you use the same name again, when the last copy becomes the .BAK file, and the first .BAK file is lost. This facility makes it more difficult to completely lose your data if anything goes wrong, but of course does double the amount of disk space used. DragonDOS also allows you to access same directory information from within programs, with FREE and LCF which give the number of unused bytes on the disk and the length of

any particular file, respectively.

In both cases you can COPY files individually or use BACKUP to produce a copy of an entire disk. Where a single drive is in use copying must be done in stages, as the Dragon memory can only hold a small part of the total disk contents at one time, and screen prompts are given to indicate when source and target disks must be interchanged.

The command VERIFY has a different meaning in the two systems. Normally the Delta operating system re-reads the disk whenever it is written to, in order to check that it has been recorded correctly, but this verification can be turned off (password) with VERIFY 0 where speed is more important than ultimate security. In DragonDOS VERIFY can also be turned ON and OFF but in this case it is only the directory track, and not the actual disk file, that is verified, although of course you may still have a .BAK file in this case.

Changing the name of an existing file is done with RENAME/ASSIGN, and files can be deleted with RLL. You can prevent a file being deleted by RLL by protecting (locking) it with PROTECT/ASSIGN:5.

### Program/memory transfer commands

In both systems you can SAVE named Basic programs and areas of memory (machine code files, graphics pages etc) and then re-LOAD them. If you use RUN rather than LOAD then the file will be both

transferred back into memory and executed. Delta has two different words in each case whereas in DragonDOS Basic and machine code files are differentiated by the syntax of the command. CHAIN allows you to load and run another program whilst preserving the current variables, and hence transfer information easily between programs.

Finally in this group MERGE/APPEND allows you to join two programs together, although you must ensure that the line numbers are different as the incoming (old) program has precedence and will overwrite any lines in memory with the same numbers.

### Data and file handling commands

In the area of DATA transfer and FILE handling there is a major divergence between the two systems and to appreciate the significance of this variation you must clearly understand the difference between "serial" and "random access" files.

The essential thing about a serial file is that it is one long string of data and if you want to recover a particular item you must start from the beginning and work your way through the items in sequence until you find what you are looking for. If you have used cassette files on the Dragon then you will be familiar with the general idea of a serial file. If you want to add data to, or delete data from the middle of a serial file then it is usually necessary to rewrite the whole file. Thus, although serial files are a compact way of storing data it is difficult to change or update them.

On the other hand, a random access file is much more flexible as each item (or type of item) is stored in a separate record and can be modified or recovered independently, although as usual nothing is for free and more space is needed by this type of file, and it can take longer to find a particular item unless you know where it was stored.

The file handling capabilities of DragonDOS are relatively simple, and effectively restricted to the serial type, whereas the Delta system contains much more sophisticated routines which allow the user to easily produce and manipulate all types of record.

### Using serial files

In general terms you must carry out a number of operations to set up and use a serial file. The first stage is to CREATE a file with a specified name, thus setting up the format for the file. If created it is a cassette system you can only deal with one data file at a time, in a disk system you can usually wait to transfer data.

between a number of FILES at the same time. Programs can communicate with data files through individual input/output channels (up to eight on Delta and 10 on Dragondos), connected with OPEN n. Data is actually sent to a file with PRINT#WRITE, and when the file is finished with you need to CLOSE it to ensure that the last items are transferred. To recover the data you need to OPEN the file and use INPUT#FREAD to transfer it back. (LINE INPUT#FREAD are the equivalent commands for purchased strings). The EDP command is used to prevent you crashing when you have read to the end of a file.

Dragondos has no OPEN command as files are automatically CREATED and opened when you use WRITE, FREAD or FLEAD. Extended versions of these in which FROM and FOR parameters can be specified are also provided, where FROM defines the start point in the file and FOR defines the length of the record, and these allow you to insert and delete data more easily if provided you have CREATED your file in a stick to your present format. The LOC function points to the position of the read pointer in the field.

With Delta you need to use all the standard commands described above to set up and manipulate your files but the system is more user-friendly and flexible. In addition FIND and RESTORE are provided to move the read/write pointer to the end and start of the file respectively, and FLUSH clears out a file ready for re-use under the same name.

Personally we prefer the command names used in Delta as they are easier to remember since they correspond closely to their normal Basic equivalents. Whilst you can set up a standard Basic routine to search a serial file for a specified string in either case this can also be carried out more simply in Delta with FIND, which sets the read pointer to the start of the target string ready for INPUT#. Another useful feature of the FIND command (especially if your memory is as bad as ours) is that you can use wild characters in the search string (indicated by asterisks), except as the first character. Thus if you remembered that the person whose telephone number you wanted to look up was either CLUNWIGHAM or CONWINTHILL you could search for both at the same time with C\*W\*H\*H\*.\*.\*.\*.\*.

#### Random access

The Dragondos manual gives an example entitled "simulated random access" but this really describes a rather inefficient serial file with lots of blank spaces in it. The only other data handling commands in Dragondos are SWRITE and SREAD which write directly to specified disk sectors, and hence could be used to produce a scatter access database, albeit with a great deal of effort.

On the other hand, Delta lets you produce and handle random access files as easily as serial files, even allowing you to modify the record length from the industry standard of 128 bytes with the DIM# command. In addition a straightforward method of combining the best of both worlds by producing indexed random access files where FIND is used in a serial index file to point to the random access record is explained.

#### Executive commands

An important feature of Delta is the suite of executive commands which enable the programmer to easily produce applications software which automatically starts up and operates without any intervention from the user.

BUILD allows you to construct an executive file (which is rather like a program) on disk containing a series of commands and DO enables this series of commands to be accepted as if they were keyboard input and carried out. BOOT causes the disk to automatically carry out a single predetermined instruction when the drive is booted or selected, and as this instruction can be to RUN a program or DO an executive file there is no limit to the chain of action which can be set in motion. Although this facility is not essential to the average hobbyist it is invaluable in any application where it is needed that unskilled personnel should use the Dragon for serious purposes, and it is rather surprising that Dragon Data has neglected this area.

The Dragondos BOOT command is completely different and its function is described as "loading another operating system from disk into memory", which sounds as if the ghost of the OS/2 operating system still lives.

#### New Basic commands

The Dragondos cartridge also adds some Basic commands but, although these can be useful, none are particularly dramatic improvements.

HMM gives the highest memory location available to Basic by subtracting the amount reserved for CLEAR. This may be useful if your own memory is bad! FHEX gives the number of free bytes available for strings. More importantly it also locates "garbage collection" (efficient re-stacking of strings). You can therefore use it to control at which points in the program this is carried out, and hence avoid unpredictable crashes when your Dragon independently decides it is time to put its house in order.

ERR# GOTO over-rides the normal error message routine and directs control to a particular line which can use ERR (the error code) and ERL (the line number where the error occurred) to produce a custom error message without halting the program. These functions are useful in complex programs as they allow you to

centralise your error checking, but it is not difficult to produce your own versions.

BEEP and WAIT are commands which give a warning sound and temporary program delay which take up less memory than the alternatives.

SWAP exchanges the values of two variables without using dummy variables (eg SWAP X, Y replaces A = X, B = Y, X = B, Y = A).

Finally, AUTO generates line numbers automatically, from a defined line number and with defined spacing.

#### Delta options

The Delta controller will still be available separately from premier (unless the Dragondos cartridge which is only sold as part of a package) so you can still use it with any data available.

In addition the Premier Encoder 80 editor/assembly/monitor or Toolkit (which adds a very extensive range of useful new Basic commands including all those in Dragondos) can also be fitted within the cartridge to provide the user with a very extensive range of facilities.

#### Conclusions

Like the man says: "you pays yer money, you takes yer choice". In our opinion there is no doubt that Delta is a better operating system than Dragondos and it is a pity for the user that Dragon Data decided that it had to produce a competitive product rather than simply adopt the Delta system.

If you just want a faster way of storing and retrieving programs then you will perhaps be satisfied with Dragondos but for any more advanced purposes we firmly recommend Delta.

The decision whether you should buy the "official" product is a difficult one, as disks are not interchangeable so any software Dragon Data itself produces will only run on its own system. However, previous Dragon Data software offerings have fairly been outstanding whereas Premier/Comans are already offering a number of substantial programs on disk and it may convince enough software suppliers that their system is superior there is going to be a real fight.

The Price of the Carriers Package was still not finalised when we went to press but it seems likely that the "recommended price" will be about 15 percent higher than that of Dragondos (£275), although it remains to be seen how far individual dealers are prepared to cut their margins to compete. ■

# DRAGON 32

## THE RING OF DARKNESS

The game created to be the most complete, thrilling, addictive and detailed adventure ever written for the Dragon 32. A whole graphic world of nearly 5,000 travel (day) with kings, princesses, mad wizards and dangerous quests will unfold before you. Across oceans, rivers, mountains and forests you travel to battle in many towns and dwell like royalty in vast dungeons (more than nine levels deep) with over 20 different creatures in 3-D graphics. In search of fortune and the hidden secrets of the Dark Ring. Many hours of mystery, suspense and raw excitement await you.

*"The most impressive adventure created... seen displayed onscreen TV in our house." Your Computer (April)*

## DRAGON TREK

Your starting base just entered quadrant 0-0. You are surrounded by eight battle stations of the Klingon Empire. Do you fight or run? They launch a salvo of proton torpedoes. You're HIT! Call a damage report. It's OK, the shields are holding, the maximum is up to you, but be quick or they will attack again. Hi-res graphics, enhanced computer and lag free interaction will have you zapping Klingons until starboard 0477.

*"Excellent value for money."*  
Your Computer

## PEPPER'S GAME PACK

Huge blue mushrooms, mad wizards, booming bricks, chessboard strategy, doomed space shuttles and mind boggling codes. They're all to be found on the great compendium of six games (Madison Marches, Mad the Necromancer, Pepper's Baseball, Chessboard, Tracker, Chessboard Run and Masterbrain.)

Available from  and good software outlets.

## ARTIST'S DESIGNER

Produce intricate designs in hi-res graphics and save them on cassette. Full list of features includes text merging, joystick or keyboard control, circles, pens and shape replication. Ideal for home video captions, education, charts and diagrams.

All prices include p&g, VAT and the WINTERSOFT guarantee of quality and reliability.

# ...CUMANA ANNOUNCE THE LAUNCH OF THEIR NEW DISK DRIVE FOR THE DRAGON MICRO...

**T**he rapidly expanding Dragon Micro market now has a top quality addition, with Cumana announcing the launch of their new disk drives to the eagerly awaiting audience of Dragon Micro users.

Cumana disk drives are designed and manufactured to the highest standards. They have an independent power supply, 12 months warranty, and are fully assembled and tested before packaging. As part of the package Disk Drive A is supplied with the "DELTA" Disk Interface. They are now available — at unbeatable value for money prices — from well known High Street outlets.

Look out for the distinctive Cumana packaging in your High Street today!

Cumana Limited, Pines Trading Estate,  
Rosed Street, Guildford, Surrey, GU3 3DH.  
Telephone: Guildford (04483) 503701 Telex: 5553365

For further information about Cumana disk drives for the Dragon Microcomputer, please complete and return this coupon.

## for the outer limit in pure explosive action

### TASKSHIP £9.95

You are in command of the leading spaceship on a mission to quell a rebellion on the mining planet Phlox. The enemy have set up missile defences and fuel dumps on the ground, and tank ships and defending saucers in flight, guarding the access to the inhabited cavern. You must penetrate as far as possible, destroying defenses, stealing fuel and avoiding missiles. Cock with a tankster and you will retain while in contact, but beware the pull of the black holes and may the force be with you, or you fall in.

Joystick or keyboard option.  
You can play Taskship as it stands or you can adapt or replace the scenario using the chase option.

### PACERIDES £9.95

Unlike any other "RAC" game you've ever seen — guide your RA, ER Droids Cluster through the spaceways clearing a path to the jewel points to earn your smart-bucks... but beware the mines and the megarhine.

- Super blaster lays destructo-mines!
- Super bombs disintegrate everything in your path — right up to the wall!
- Free choice every 10,000 points for escalating difficulty!
- Multi-player ability — up to 4 players in competition!
- Super high resolution graphics and machine language for ultra speed!
- More sound — more action — more features than any "RAC" game in existence!

### MINJA WARRIOR £9.95

Born from Arcade Master Charles Forsythe! The most original game ever produced! 18 levels of breathtaking action. Up to 6 players in competition. Keyboard or joystick control.

Guide your Minja through ladders, fire, pits, falling monsters, and King Minja's attack — MINJA GRANDMASTER. A totally awesome experience in arcade action begins with smashing rocks with your bare feet and leads to the most wicked combat finger you are likely to experience — anything.

(Agreement pp.13)

## SWORD £8

#### Special features:

- 16 to 16 page memory display
- Hexadecimal or octal-hex-hex representation
- Cursor memory writing in hex or keyboard character
- Popping to show occurrences of 16-bit hex values
- Build in double cursor editing
- Cursor position variable as parameter for other commands
- Status page shown on every command entry, including:
  - Address list under cursor bit
  - Hexadecimal and binary representation of bits at cursor
  - Key/Source Value (V)
  - Label Address (L) — destination for jump calculation
  - Register display with condition code analysis
  - Bit breakpoints with contents, address and status
  - Cursor controlled register writing
  - Cursor selection of 8 hexapoints
  - Hexapoints can be positioned, selected and de-selected
  - Flag to show which breakpoint cannot yet set
  - Hold command to freeze in hex after set
  - Copyable from type-in address or cursor position
  - Hex copy (move) also working as fill facility
  - Binary and Hexadecimal side entry
  - Long and short relative displacement calculator
  - Working program in execution
  - Data calculator and Hexadecimal routines

Prices shown include p.p.g.

# A US showcase for the Dragon

*Craig Munro previews Colour Expo '83, to be held in Pasadena, California, this month*

THE WORLD OF the Dragon seems to keep growing and growing. Here on the US coast, I see some different things than Dragon users in the UK do. For instance, this November the first Colour Expo is being held.

Now, you may be asking yourself, "What is this Expo thing?" Well, it's being sponsored by Colour Computer Explorations, a subsidiary of the American magazine, and is being hosted by Colour America Users Group (formerly the Los Angeles Colour Computer Users Group). It is the first time a non-profit organisation has ever hosted an event of this kind.

Expo '83 will be held in Pasadena, California, and is expected to draw 15-20,000 people from all over the world. And yes, you guessed, DragonTano will be there in full force!

This convention has certainly received some high-powered backing. The mayors of both Los Angeles and Pasadena have proclaimed the weekend of the show as "Colour Computer Weekend" in both cities. The mayor of Los Angeles, Tom Bradley, urged people to attend Colour Expo '83 saying: "This exposition will provide . . . lectures and classes about computers, and a class on programming, all open to the public, emphasising 'Education Through Technology'."

DragonTano will be at the Expo with a brand new national convention booth. "We wanted something that really showed off the Dragon II," George Macdonald, director of microcomputer products at Tane Corporation in New Orleans, said.

"It'll be done in time for the Expo, and it's going to be a really great event. We're really looking forward to it." Tano will be premiering the Dragon II+ on the west coast at the Expo and, according to George, ". . . we have a lot of other exciting things to preview at the show — new stuff everyone will be talking about."

## Hall of Fame

The Colour Expo also has a list of guest speakers that looks like a Dragon programmers Hall of Fame. William Barden, Dennis Kitz, Jake Commander, Steve Bjork, and many others will be speaking. Also in attendance will be the programmers of games such as The King, Mockhead, Junior's Revenge, Pac Attack, and many others. The convention floor will have around 70 booths with speakers and companies displaying their hardware and software goods.

Colour Expo '83 should establish the Dragon's position in the US

"We are really looking to the Expo as being the biggest event of this kind for the Colour Computer and the Dragon in the United States," Kerry Leichman, editor of Colour Computer magazine, said. He thought a moment and added: "Maybe the world!"

"There is going to be a lot of things going on at the Expo that'll make it worthwhile for anyone anywhere with an interest in EBCU to come."

Kerry said the fact that tickets for the event were being sold around the world with people expected from as far away as the UK, France, Germany, Asia and Australia.

I spoke with one of the founding fathers of Colour Expo and President of Colour America Users' Group, Mark Randall. "We've (the group) put a great deal of time and effort into this project, but we think it'll be worth it," he said. "The proclamations, the television interviews, and the events planned by the major computer firms (referring to DragonTano and Radio Shack) were done generally by us. All of us at the group are really excited about it, and I am really looking forward to meeting fellow users from the UK."

The Colour America Users' Group has faced a massive task in preparing for the convention. Colour America has had a hand in practically every planning aspect — from arranging the convention hall to choosing a hotel.

The three-day event will also have a special panel discussion on software piracy — the illegal trading of copyright software, a major problem in the US and

around the world.

This controversial subject will be handled by mediator Kerry Leichman. Both pros and cons to piracy will be presented, and word has it that some of the largest profits in the United States will be attending in-person to discuss their reasons for piracy. There will be representatives from users groups, programmers, dealers, manufacturers and magazines on the panel.

## Surprises planned

There are also a number of surprises planned for the Expo — both Kerry and Mark informed me that they had a lot of things up their sleeves. They hinted at a spectacular video presentation on the Dragon and Colour Computer. They also mentioned a game simulator. This would be like "actually being in the environment the game revolves around", the director of the simulator project, Robin Hudson of Colour America, said.

With around 70 booths at the show, many Colour Expo '83 goers are wondering if three days will be enough. The roster of businesses is impressive. Mark Data, Computerswires, Tom Mix, Radio Shack, DragonTano, and many other big names in software and hardware will be in attendance.

"It's an exciting weekend no one with a Dragon or Colour Computer should miss," Kerry Leichman said. "I'll be there — I've had Freddie Laker isn't around any more so I'll have more UK visitors. ■"

**Take aim  
—it's open  
season  
on ducks!**

Pancy yourself as a pretty good shot? Then test your aim with **A Westwood's Duckshoot**

**DUCKSHOOT TESTS YOUR skill** at shooting ducks. Using arrows & graphics, you are presented with a flock of green and yellow ducks flying overhead using a shot machine code partial scroll. The idea is to try and shoot them all in the allowed time, using the spacebar to shoot.

The Program

The Dragon's very good line command is used in line 470 to blank out the blank fill by adding "B" and no saves using a blank array.

### Program notes

83-248	Intimate and define shapes.
250-250	Main loop.
300-400	Start first; test for hit.
400-490	Increment score.
540-540	Ready to be drawn.
590-630	Display instructions while machine code is parsed.
680-710	Time up and display score.
820-880	Quit alone on screen.
The end	

The following are some of the

# DRAGON CHESS

***Some Dragons are bad losers!***

***Others are just bad at losing.***

- Six levels of play.
- All legal chess moves including en-passant, castling and pawn to queen promotion.
- List of previous moves stored which can be displayed or printed.
- Loading and saving of games positions from tape.
- High resolution graphics which can be flipped round to make black or white play from either end.
- Simultaneous text and graphics.
- Sides can be exchanged at any stage.
- Best move list.
- Set up from any position.
- Opening move library.
- Moves may be taken back and play resumed from any point.
- Change level of play at any point in the game.
- Will adjudicate games between humans.
- Very high standard of play.
- Professional packaging and life-time guarantee.

**DRAGON CHESS is available for just £9.95 from:-**

# Programmer's Guild

A PART OF THE AD

## Grand Masters Of The Drag

### Protector

Somewhere on the edge of the galaxy lies a planet threatened with invasion of alien craft, you are the sole DEFENDER of the human population as you sweep the skies with your sensors to locate and destroy before they carry off your charges to who knows what fate, as they mutate and swarm over the planet's surface.

This program features a Hall of Fame where your current rank is shown. There is also a menu to show the controls and scoring system etc.

### Galactic Raider!

The controller of KS - 3 wiped the heads of sweat from his forehead, the screen was clearing. A quick check of the 'pane only 3 ships operational, reinforcements not to be relied on. How could Galactic control be so negligent. The KS - 3 sector was of paramount importance, it held the only known resources of Kynite. If this last sector was lost the whole galaxy could be overrun within 6 months. "These will roll for this" he cursed silently.

Still no time to worry about the future. He noticed the first ship appear, then another, then another. The fourth returned - he'd seen this pattern in sector KS1 - 4 before it was overrun. The GALACTIC RAIDERS had come in waves that swamped bigger defenses than he could muster. His only hope of holding the situation until reinforcements arrived was by trying to cut the raiders down before their formation was complete. It meant sending his own ships in individually to almost certain destruction. But it had to be done. He found his hand had already thumped the communication orb. The words croaked out of a dry throat.

Alert, Alert GALACTIC RAIDERS !! Scramble flights 1, 2 and 3 this is not a drill. Repeat THIS IS NOT A DRILL.

## Order with confidence

All programs in this advert carry a 10-day money-back warranty — if you are disappointed in the programs send them back for a full refund!!

# TASKSHIP

## Task Ship

Your mission is to penetrate the underground caverns destroying the fuel dumps, missile sites and enemy radars, avoiding the occasional showers of enemies and if that is not enough, there is the occasional black hole, which may hurl you into oblivion or pop you into unexplored caverns or ?

Taskship comes with two big pluses over all other Scramble type programs :

1. The ability to change the scenario; if you are having problems with a particular part simply enter the change option and alter it.
2. The ability to draw a new scenario; when you have conquered the monster standard scenario, try your hand at drawing your own. Challenge your friends to beat your scenario, and that's not all, if you think yours is better, send it in and if we use it, you will receive a 2.5% royalty on all further games sold using your scenario !

# Invite a Dragon to your party

... And to avoid any arguments put him in charge of the music for the night.

"GREAT MACHINE, THE Dragon," I thought to myself as I listened to the Brandenburg Concerto No. 3 whilst programming. The music was coming from the little cassette player I use for loading and saving programs whilst still connected to the Dragon, so the sound was being routed through the TV loudspeaker. I was using AUDIO ON: MOTOR ON.

I then tried using a "Faster" cassette, and found it was fun to AUDIO ON and AUDIO OFF in time with the music. I then experimented with turning the sound on and off from within a program, trying to feel how much could be let out before it became unrecognisable. (Some psychologists are bound to try that one out.)

## Inspiration

However, being a serious-minded person, I found something missing. What I was missing was utility, usefulness, a practical application for my Dragon. But I didn't want to keep my accounts — I said serious, not boring. Being unwise enough to have children, my inspiration came from them (they often inspire me, but usually I'm against the law).

Imagine yourself at a children's party (or, better, as an "adult" (who's kidding?) party where there are those obnoxious games-things. What happens? The music goes on and on, the parcel gets passed, the chairs are circled, the music stops — and ones of "under" are heard. Complete cannot be unfair, and so I have written a party program.

**Boris Allan (below)**  
explains how to do it

The idea is that the computer controls the tape recorder, switching the sound on and off randomly. To add a touch of excitement there is a loud "baking" noise, and when it stops it blows a raspberry (my favourite party). The sequence starts with C being pressed, and is restarted after each songtime with C again. So, if you want to be loud and loud of the party, here is the way to do it.

## Program proper

The program proper starts with line 1000. The computer waits until the key C is pressed (INKEY\$ is a "C"), and clears the screen, switches on the sound, starts the

cassette motor. A number between 400 and 1000 is then chosen, and the value stored in T1 — the timer is set to zero. A jump (line 1005) is then made to the subroutine at 1080.

## Subroutine

The subroutine paints a random colour blob, at a random place on the screen — except the bottom right-hand corner (or the screen would scroll), which is why the parameter for the RND function is 511, and not 512. At line 1060 the current value of the timer is stored in T, and if the value of T is a multiple of 30 then the computer plays a sound over the music (a "bake"). If the computer plays a sound then the cassette sound is automatically switched off, and so we have to put audio back on. This is the end of the routine.

## Value of timer

If, instead of T, one uses TIMER then the ticks are less frequent. The value of the timer changes from one side of the equality, in the IF, to the other, so to be safe store the value of TIMER (and this will go for many other programs).

Back at line 1005, the current value of the timer is checked against T1, and if the timer is less than T1, the line is repeated.

At line 1070 the motor is stopped, a raucous sound is made, and we go back to the start at line 1040.

A short program, an exceptionally useful program, and — I think — a program which could only work on the Dragon. ■

```

1000 * PARTY MUSIC CONTROLLER
1010 *
1020 * BORIS ALLAN
1030 *
1040 AN=INKEY$:IF AN="C" THEN 1050 ELSE 1040
1050 CLS: AUDIO ON: MOTOR ON: T1=400+RND(600):TIMER=0
1060 GOSUB 1080:IF TIMER<T1 THEN 1060
1070 MOTOR OFF: SOUND100,8: GOTO 1040
1080 PRINT @ (RND(511)-1), CHR$(143+(RND(7)-1)*16):
1090 T=TIMER: IF INT(T/30)*30=T THEN PLAY"T200:V15:05:C": AUDIO ON
1100 RETURN
  
```

# String power at your fingertips

**Tim Cooper** helps to unravel some of the knots in string manipulation.

**HOW LONG** IS a piece of string? Of course this question has no answer, but when talking in terms of computing the maximum length of a string is fixed according to the hardware available. To discover why this is so, you have to consider two questions: What really is a string? and how does a computer deal with one?

Character	Eight bit register								ASCII code
	128	64	32	16	8	4	2	Units	
A	0	1	1	0	0	0	0	1	97

\*After (Boschert's) Fall, just shortly before completion, and the January 1968 edition of *Flow*.

Returning to the subject of strings, the Dragon user is fortunate to have at his or her fingertips a powerful set of string-handling commands provided by the resident Microsoft Basic interpreter. Once you can master string handling you realise how invaluable strings are and the potential they offer.

is quite the original word which is on the theme of computers. To maximize your enjoyment when using the program I have arranged the letters in the words in the data statements in such a way as to make them difficult to read whilst keying the program in.

The commands I have used in the program that deal with strings are as follows:

**CLEAR 1000** — This reserves memory for string storage and zero's variables. The amount of memory reserved is defined by the number following — in the case of this program, 1,000 bytes.

**DIM WS(30)** — This dimensions a string array of the size defined in the brackets. In the program the string WS has been divided into 30 different locations. **B**

A string defined

A string is a character or a collection of characters and because a computer works in binary (base 2) each character has a binary code. The Dragon has an eight-bit processor, which means that this code takes the form shown in the diagram.

Thus, if all the phones shown contained in  $\mathcal{P}$  the largest number possible would be represented, 255. The maximum length of a string therefore is 255 characters.

The method used to discover this is very useful as it explains things like why the ASCII codes for characters are from 0 to 255, giving 256 different cases, and the reason that it is convenient to have 512 locations (256\*2) on the Dragon's non-redundant `char16_t` system.

### Example program

To demonstrate the usage of `pin`, `g` and `string` associated commands I have written a program for you to type in. The program instructs your Dragon to create anagrams for you to solve. The words are in data statements from which, on each game, the computer selects one word at random and then jumbles the letters on. You then have

## Action Packed 100% Machine Code Arcade Software for DRAGON 32

### Micros Broids

£8.95

### Micros Chess

£7.95

### Micros Crusader

£8.95

### Micros Vultures

£8.95

### Micros Banks

£7.95

Excellent machine code programs for the Dragon 32. Personal Computer News is pleased to announce the release of these popular computer games.

"We want they are excellent" - Dragon 32  
"The best of my good friend's games" - Dragon 32

"Great movement for the home made game" - Dragon 32  
"Fast moving and addictive" - high recommended

### Micros Dragon 2

3 games for £8.95

### LATEST RELEASED - AVAILABLE NOW

Get for a quiet drive in your Morris Minor when you inadvertently wander onto a footpath and find yourself in the middle of a Great Fox. To turn back against the giant you would be forced. The only thing to drive against teeth, gnawing wheels, poison barbs and make for the escaping tree and safety. In you can save the world before and all risks, drive fast, move in and being you over for Morris and Morris behind you. You can see them drive, watching the cars in front. Can you make it faster you can take to the ground? Another superb machine code game with amazing high resolution colour graphics and sound. Features are: graphics, a very fast action with a computer, damage report, time, six levels of difficulty and full effects. (SPEAK TO THE GAMERS)

All orders dispatched by return. Fast class post.

Orders and funds requests welcome.

Available from SPC-TRM and other good software dealers.

### Micros Dragon 4

3 games for £8.95

# MOVIE PRODUCER

FOR THE DRAGON 32

Now play movie producer. Peckie Spouting, after successfully selling your script, you are plunged into the trials, tribulations, misadventures and insanity of the movie world. As actors get drunk, cars stop, directors alter the script, and a thousand other problems hinder you. But occasionally help arrives in your struggle to finish your own movie on budget and on schedule. (But will the public like it? ... Will the critics like it? ... Will you like it? ...)

Morris is associated with Film Production Company.

```

each containing a word.

**STRLEN(0,10)** — This gives a string of the length specified by the number in the first part of the brackets, consisting of the first part of the brackets, consisting of the character in the second part of the brackets. In the program it is used to display purposes.

**AS** — This is an example of a simple string variable. There are a few of these in the program for storing things such as words and one of the tunes.

**CHR\$(141)** — This gives the character representing the ASCII code in brackets. In the program it is again for display purposes.

**LEN(T\$)** — This gives the length of the string in brackets. It is used in the program to find the length of the guessed word and the length of the anagram.

**ASC(C\$)** — This gives the ASCII code of the string in brackets and is used in the program to see if the input by the user is a number, after 5 guesses.

**MID\$(LEFT\$,RIGHT\$)** — These three commands are used for slicing strings and I have found them to be the most useful

string functions. To slice a string is to split it into its composite parts. The command **MID\$(T\$,N)** gives N characters of T\$ starting at position N in the string. For example, **MID\$(LOAD,2,2)** would give "OU". The commands **LEFT\$** and **RIGHT\$(WALK,4)** gives "WALK" because the 4 told the computer to give the first four characters of the string from the left. Similarly **RIGHT\$(WALK,4)** gives "WLD", the last 4 characters starting at the right end of the string. In the program it was only necessary to use only the first two commands **MID\$** and **LEFT\$**, which have been used to split words into the letters that make them up. I used **LEFT\$** in conjunction with **INPUT** to assure that the computer accepted "T", "YES", "YEP" etc. in response to asking the user if another anagram was required.

These commands make up the bulk of these dealing with strings that are available on the Dragon but some important ones that are not used in the program are:

**INSTR\$** — A commonly used command

that indicates the computer to scan the keyboard to check for a depression.

**INSTR\$(AS,B\$)** — This causes a search of the string AS looking for occurrences of B\$ starting from position 1.

**STR\$(A)** — This translates a numeric expression into the string counterpart. A particularly useful application of this command is when using the **DRAW** command to draw something with co-ordinates that are variables. For example:

```
10 DRAW"BM"+STR$(X)+"",+STR$(Y)+AS
```

in the example AS is the thing you want to move according to the variables X and Y.

**HEX\$(A)** — Finds the hexadecimal value of a number. In other words, it changes a number from base 10 to base 16.

By looking at the way that I have manipulated strings in the program and examining the information given you should find strings easier to handle and a very important part of Basic programming ■

### TRACE RACE

Race your Light Cycle around the Games Grid. Force your opponent into a Power Trace or into the Grid wall to win. A game for two players with joystick, or can be played by a single player as **TRACE RACE (SOLU)** — one joystick required. **£8.75**

- Features:
- "In Progress" Speech and 100% machine code Sonics
  - Full High-Res Colour Graphics
  - Instructions & Presentation Cassette Case

### DRAGON RACER/WARP INVASION

Super value action double pack! Two 100% machine code, high-res games available in two cassettes in double size "Book" type package, making an ideal present and great value at only **£9.98**

### OTHER GREAT DRAGON GAMES AVAILABLE FROM CABLE SOFTWARE INCLUDE:

#### BACCARAT

Bring Casino quality gambling into your living room with BACCARAT, the game played by the rich and famous. See if you can beat the bank at Monte Carlo!

#### CAVE FIGHTER

At last a superb 100% machine code "Scrabble" type arcade game, complete with fast scrolling, high resolution colour graphics & sound.

#### CHOCOLATE

1 finger type game with a difference. Help our hero Super Snake Eatray make as many soft journeys as the chocolate at the end, using his Slick & Slick Mx 1/2 to avoid the gnatcatching Laver Gnat.

#### DRONES

A gripping 3D simulation game, taking place inside your Dragon. Equip your hero MX Type Gnatcatcher, you must search out and destroy the evil Mole Gnatcatcher. At your disposal are Logic Gnatcatcher, Pulse Laser, Precision Destroyer, Thunder, Blaster and screen lighting System.

## LIGHT PEN

DRAGON 32

Introducing a **NEW** program for the Trojan Light Pen. This new **ADVANCED** program includes the following graphics facilities:

- Draw Box
- Draw Circle
- Draw Line
- Draw Picture
- Colour Fill Designated Areas
- Save and load pictures to and from tape

All on 16-Kes Screen in any of four colours. The following functions are for use on the Text Screen:

- Data entry and processing
- Menu selection and control
- Games playing — the fascinating game of NIM included on cassette

This is a first class program which gives hints and tips on how to write programs for the pen. Ideal for many educational uses.

**A TOP QUALITY PEN PLUS A FIRST-CLASS PROGRAM FOR ONLY £28 which is fully inclusive.**

**THE BEST PEN PACKAGE AVAILABLE**

Restore the power of the Death Star

bottom right co-ordinates of the area must be given, as must the name of the array you are PUTting. In addition, however, you must give the computer information on how to handle the graphic details it has stored away. Using PSET in a line like:

PUT (XD+S, YD-S) - (XD+S, YD+S), CK, PSET

simply reproduces the sprite CK as it was when it was first drawn.

Animation of sprites, of course, involves firstly producing them on the screen, then wiping them out and producing them again in a slightly different location. An example

the word PSET in the PUT statement caused the sprite to appear. It was my belief that using PRESET should remove the image. That is, the wipe-out line should read:

PUT (XD-S, YD-S) - (XD+S, YD+S), CK, PRESET.

The actual effect of PRESET was unexpected. As required, all the 81 pixels that formed the image were turned off. But the previously unit pixels that had formed the background were now formed on. What appeared on the screen was not a blank section but a negative image of the original sprite.

This is made use of in lines like 610 to show an explosion, but that still leaves the problem of wiping out the sprites unsolved.

This is overcome by blanking areas of blank screen that are the same size as the image to be covered. This is what is being done in line 170: a blank area the same size as the player's gun is being stored, and later PUT on to the gun when that item is being animated. Something similar is going on in line 380 but this time a few random stars are being swept up into the blanking arrays so that flying sprites used in the game do not de-stellate the galaxy.

### Program structure

Lines 10-75 — story and rules displayed.  
Lines 80-380 — preparing sprites and background.  
Lines 420-710 — battle with the Death Star.  
Lines 720-890 — end of the world and replay option.  
Lines 900-1200 — battle with the T-fighters.

Match wits with the Empire's fighters

Lines 1230-1270 — subroutine to move the gun.

Lines 1280-1370 — sound effects subroutines.

### Main variables

Arrays: CK, GH, TF and SM — sprites; CB, CS, DF — blanking out sprites.  
GP, YG — co-ordinates of the user's gun.  
XD, YD — co-ordinates of the Death Star.  
XT, YT — co-ordinates of enemy fighters.  
XB, YB — co-ordinates of enemy bombs.  
ST — fighter sound pitch.  
SC — current score.  
H — best score so far.  
T and TZ — variables related to TIMER.

# Interfacing: the basic technique

*Dr Mark Varney explains the theory behind designing your own interface*

ONCE IT WAS too expensive to have a computer in the science laboratory other than for the most necessary of experiments. However, the development of the relatively inexpensive personal micro-computer means that scientists now have potentially better and more comprehensive facilities for instrumental control and data collection than ever before.

But there often still remains the problem of interfacing with the outside world. This article will show how a few basic principles of design can be brought together to produce a piece of equipment that is controlled by an ordinary computer, the Dragon 32, and that can better many of the commercially available instruments.

## Knowing the need

In electrochemistry, my own field of interest, there are a number of different analytical techniques for measuring the extent or progress of chemical reactions at electrodes. This is not the place to delve deeply into these techniques, but the most important electrochemical parameters measured are potential, current and time. There are a number of commercially available instruments that combine several of the different techniques, but not all of them.

Thus, there is a need for a general purpose, precision unit capable of accepting a wide dynamic range of signals, acting upon them, and accurately controlling various other analogue signals over either long or short periods of time.

This method of applying a signal or series of signals and watching the result is not unique to electrochemistry and so the unit should have numerous applications to other fields (technical or otherwise). The

point of emphasis is that all that is needed is a form of generating signals, a handful of amplifiers to handle them, and a method of collecting and storing the resulting signals — none of which is at all difficult.

The design is quite straightforward. For practical reasons, to provide the greatest flexibility I chose to provide 16 channels for communication between the Dragon and the outside world — eight for outputting data and eight for importing data. I shall talk about each of these in turn.

## Analogue meets digital

The majority of signals in electrochemistry are of the analogue type — that is, continuous. They may come in various forms (as voltage levels, currents and so on), but they all have to be converted to a form that can be understood by computers.

The traditional method of achieving this is to design an analogue-to-digital (A/D) converter interface around commercially available components. These are many convenient and inexpensive A/D units in the market, such as the ZN4076, but their use in this application can be limited in several respects.

First, eight such units would be needed for each of the eight input lines, resulting in a high component count and increased size of associated circuit boards; second, the resolution is usually limited to one part in 256 (that is, eight bits). For many other applications this might not ordinarily be of concern, but, if only to be as precise as possible, we have to assume that a higher bit-resolution is absolutely necessary. Conventional A/D components work very satisfactorily at a resolution of up to 12 bits (that is, one part in 4096) — or 0.025% of

full scale activity). Although they are available for higher resolution, the use of such components becomes disproportionately more expensive as the number of bits increases.

In addition, the higher the resolution of the A/D unit, the longer is the time taken to produce each value — which brings us back to the first problem. Typical conversion times for cost-effective 12-bit A/D chips are steeply lower than about 50  $\mu$ sec which does not create too much of a problem under most circumstances, polling all eight channels would then take slightly longer than 0.4 msec — not long!

The present data acquisition system is designed around one single chip, the 16594(1), which is capable of selecting (multiplexing) one-of-eight analogue inputs and feeding the information into a 12-bit A/D converter and off to an eight-bit microprocessor bus, all within 30  $\mu$ sec.

The multiplexed data has to be read by the Dragon as two eight-bit bytes (one with eight data bits, the other with four data bits and four parity bits), in the end, what might have resulted in quite a complicated amount of circuitry has come down to a really simple solution. Figure 1 shows the signal highways and basic layout for the A/D interface.

The reason for using the 6801 Peripheral Interface Adaptor (PIA) between the Dragon cartridge slot and the A/D unit is that the PIA can be used to do other things as well as present signals to and collect data from the A/D converter, as will become clearer later. The PIA has two independent input or output ports, designated Port A (PA) and Port B (PB), with eight lines each. One of these ports, PA, is devoted entirely to importing A/D data, while three PB lines are used as the multiplexing address code in order to select one of the eight channels of analogue data.

## 'Conditioning'

Before the analogue signals are presented to the A/D converter they normally need to be 'conditioned', particularly as if high impedance voltage signals are involved — drawing too high a current through the input stages of the ADC can significantly alter the original potentials and upset the experiment. This is often the case when working with electrodes and the measurement of very small currents in the  $\mu$ A to nA ranges.

Figure 1: signal highways and basic layout for the A/D interface

■ Figure 2 shows a method of buffering electrode signals and amplification to suitable levels (100mV to 10V). For most applications it has not been found necessary to use "sample and hold" techniques for catching a signal and holding it long enough for the A/D to be able to read it. Only in special circumstances, when it is required to synchronise the measurement with other signals are these circuits included. Anyway, they only add to the expense if there is no good reason to use them.

## Digital meets analogue

Getting data from the Dragon to the outside world is perhaps a more contentious affair because not only do digital signals have to be sent out on each of the eight channels and converted to an analogue form (D to A, conversely), they also have to be held (all these values until changed again). Unfortunately, there is no one single chip to do all this.

However, the ability to generate signals by microprocessor control is potentially a big advantage in electrochemistry since it means that the waveform (sinusoidal, ramp, pulse, or whatever) can be stored in memory and then applied to the electrodes at will. The precise form of the signals, their amplitude, frequency, and so on, are all under software control and will not need external circuitry, range switches, polarity and level controls etc. — a big saving on equipment costs. Again for the Dragon 32 a 12-bit D/A conversion system was considered the minimum acceptable accuracy for the control of signals to within 1 mV on a 1 V full scale sensitivity. Figure 3 shows the essential details.

## Two-stage transfer

The transfer of a 12-bit wide word from the Dragon to the digital-to-analogue (DAC) converter takes place in two stages which the Dragon is admirably capable of handling.

If we imagine the "word" to be transferred is 010011101101 in binary, then it is manufactured as three four-bit words (or "nibbles"). First of all, the least significant nibble (1101) is transferred to lines PA0 — PA3 (it doesn't matter what the rest of the eight-bit word is on lines PA4 — PA7; they

Figure 2: Typical method of buffering electrode signals and amplification to suitable levels

are usually set to zero). This feeds information to the upper, intermediate and lower latches (A, B and C). PA0 of PA 2 is then set high which "clocks" only latch D, transferring only its information on to latch C.

The second step is then for the next two nibbles or the most significant eight bits of the 12-bit word (0100 and 1101) to be put on to the output lines PA0 — PA7, replacing the least significant bits. PB0 of PA 2 is now set high; this "clocks" all three latches A, B and C, transferring the whole 12-bit word to the DAC which then outputs an analogue voltage signal to the amplifier A1, configured as a voltage follower so as not to draw current from the DAC output stages.

As can be seen from comparing figures 1 and 2, there are some spare lines from both of the PAs. These are buffered via 74LS245 chips (octal bus tri-state buffers) and fed to 12V or 24V relays. These are used as simple on/off switches for the operation of ancillary equipment in electrochemistry (there is all sorts of equipment that is ideally suited to the sort of thing — drivers, timers, chart recorders, etc).

By designing a general purpose interface around these building blocks, it is possible to produce a high quality, versatile instrument at low cost — even if you

have only modest experience in electronics. The hardest problem to overcome in most applications like this is not so much the constructional part but the actual practical operation of the interface and the writing of the software. Because the interface often need to work at reasonably high speeds (that is, sampling at least every msec or so), machine code programming is almost always needed, with the little processor this is much less of a hardship than with other processors; there are several technical features which make life a lot easier here — such as position independent coding.

## Start in Basic

However, in my experience, machine-code programming is usually the last thing to be attempted. In order to ensure everything is in the right order (addressing each of the latches, setting output signals, inputting data on the required channels, and so on), all initial programs are written in Basic, and then tried, tested and altered, over and over again until just right, and only then converted into machine code format. This isn't easy — but it does save time!

All of this avoids some of the finer details of interfacing the Dragon, such as using interrupts, data direction registers, control lines, and manipulating the data once in memory. Such things are probably better left until later by the beginner.

The best advice is to define as carefully as possible what one wants, both in specification and performance; then, once this has been determined, the next step is usually very easy — if books can't tell you, then there is always someone who knows how to deal with the problem.

What should be remembered is that any instrumentation envisaged is usually far simpler when implemented digitally rather than by an analogue approach, so it is well worth getting to grips with interfacing techniques. There will be a lot of companies wanting people with this sort of experience in the future!

If anyone is interested in further details about the data acquisition unit they can contact Dr Mark Wainryb at Electro-analytical Technology, 6 Access Road, West Croydon, London S12 7YH. ■

# OPEN FILE FOR DRAGON USERS

Send us your Dragon programs, beginning with a general description and then explaining how the program is constructed. Take care that the listings are all bug-free, enclosing a printout if possible. We pay £5 for each bug-free program published, double for the program of the month. If you have any problems with the listings, please send your queries to the appropriate author, *Dragon User*, 12-13 Little Newport Street, London WC2R 3LD.

## Chaser

From Trevor King in *Chalgrove*

CHASER is a game for two players. Each player controls a coloured disk, one yellow and one white.

The player on the left of the machine uses the right hand joystick while the player on the right uses five keys, four for direction and one to drop a patch. A 'patch' is light blue and if you walk on one you are transported to centre screen. The left hand player uses his fire button for patches.

The winner is the first player to accumulate 1000 points by eating oranges.

At the bottom of the screen the score and remaining number of patches are shown for each player.

The control keys are: O — up, L — down, M — right, N — left and K — patcher. Both players can be given key control, but a practice it spoils the game as the PATCH function only picks up one key at a time, hence joystick control.

# EXCITING GAMES

## DragonTree Programs

A VARIETY OF CHALLENGING GAMES

DragonTree Programs are a series of exciting, challenging games for your Dragon. They are designed to be played on a Dragon II or Dragon II+ and are available in a variety of formats including cassette, floppy disk, and hard disk.

**REVERSI**  
A classic board game, Reversi is a challenging game for two players. It is available on cassette, floppy disk, and hard disk.

**TANGRAMS** £4.95  
A classic puzzle game, Tangrams is a challenging game for two players. It is available on cassette, floppy disk, and hard disk.

**BOWLING** £4.95  
A classic game, Bowling is a challenging game for two players. It is available on cassette, floppy disk, and hard disk.

**BARTENDER** £4.95  
A classic game, Bartender is a challenging game for two players. It is available on cassette, floppy disk, and hard disk.

**COPPICE Software**  
A classic game, Coppice is a challenging game for two players. It is available on cassette, floppy disk, and hard disk.

## Light cycles

From Murray McGowan in Glasgow

THIS IS A two-player simulation of the light

cycles in the movie Tron. The game first asks for a winning score, then it begins. When a cycle crashes the opponent gets the point. For an update on the score (press the space bar).

### Program notes

50-60 Starts game.  
70-100 Sets up.

110-200

Resets joystick, cycle 1 check for crash, move.

210-320

Resets joystick, cycle 2 check for crash, move.

340-430

Displays explosion.

440-460

Checks for winner.

470-500

Says who won.

520-620

Displays score.

From Kevin Murray in Edinburgh

THIS PROGRAM IS designed to both let the user get to grips with the Dragon 32's PLAY command and to help him design and construct larger and more complex instruction combinations as well as perfect the shorter ones.

The program stores the instructions in an array so that they can be easily manipulated. If you run out of space for your instructions simply change the DIM statements in line 20 and extend the loops and so forth where appropriate. The program has elementary error checking for

tying mistakes but this will not deal with syntax-type errors.

#### Program notes

20 Sets character memory and dimensions the instruction array (maximum of 500 instructions).  
30 Sets strings for typing error checking.

40-110  
110-210  
220

Loads data from tape.  
Checks input for errors.  
Branches program to chosen function.

220-470  
480-520  
530

Saves data on tape.  
Presents data to printer.  
Presents play command to initial conditions.  
Plays the data.

## Barbcobsnow

From Jason Aronson

THIS PROGRAM IS called Barbcobsnow because at first the pattern is like barbed wire, then a bit later it looks like a mass of cobwebs and finally changes to look like the aerial view of a snowy patch of ground.

### Variables

T = Diameter of circle in screen points  
X = Vertical position of circle  
Y = Horizontal position of circle.

### Program notes

10 — Sets mode/screen

20 — Sets random diameter and X,Y co-ordinates of circle

30 — Draws random positioned circle with random diameter.

40 — Returns to 20 to give new values to T, X and Y to repeat itself.

5 REM BARBCOBSNOW 1983

# A perfect prize

Gordon Lee provides the puzzle. Games and Computers the prize – an MCP-40 printer.

"WE SEE CLEARLY... how rare are perfect numbers and how right we are to compare them with perfect men."

—Mauri Marzanne (1588-1588)

Last month we took a look at prime numbers, which are labelled — among other things — intriguing, mystifying and unpredictable. If this is the case for primes, then so is the case the 'perfect' numbers can only be described as the most exclusive. To date only 28 perfect numbers have been discovered in a search, closely related to certain primes, which began in ancient times and which, at the present, rests with the discovery of the largest known prime,  $2^{4449} - 1$ . This scarcity of perfect numbers is in direct contrast to the fact that there are an infinite number of primes.

But first, what is a 'perfect' number?

The smallest perfect number is 6, and if we list its factors we can see why it is called perfect. Six is exactly divisible by 1, 2, and 3 and yet these three factors added together will also give the value 6. Similarly, the next highest perfect number is 28, and we can see that if we list all the whole number divisors of 28 and add them together we get a total which is equal to 28:

$$1 + 7 + 4 + 2 + 1 = 28$$

Note that we always include 1, but, of course, not the number itself as a divisor.

The next highest perfect is 496 and you might like to verify this for yourself.

But what has all this to do with prime numbers? To understand that we must go back to the time of Father Marin Marzanne, who in 1588 announced the theory that

## Prize

THIS MONTH GAMES/Computers and Computers is offering an MCP-40 Colour Printer/Plotter as the prize in our competition. The MCP-40 has a number of features that make it a very attractive addition to a computer system — it runs at an average 12 characters per second, prints up to 80-character per line and can produce charts, lines and graphs in four colours and in fine detail. It is available at a special price from the Dragon 32 Users' Club based at Games and Computers, 21 North St, Weymouth, Dorset, BH20 4AD.

## Rules

TO WIN THE MCP-40 Colour Printer/Plotter you have to send in the most elegant solution to the puzzle. You must show both the answer to the competition and how to solve it with the use of a Basic program developed on your Dragon 32. As a tie-breaker, complete the following sentence in 10 words or less.

I want to add an MCP-40 Colour Printer/Plotter to my Dragon 32 in order to...

certain numbers in the form  $2^p - 1$  — 1 was prime, where  $p$  itself was also a prime number. Of course, Marzanne realised that not all prime numbers could be used as  $p$  in the formula but he did state that  $2^p - 1$  was prime for

$p = 2, 3, 5, 7, 13, 17, 19, 31, 67, 127$  and 257. Unfortunately he was wrong in two of his values, as 67 and 257 do not produce primes. He also missed 61, 89 and 127 which do.

Nevertheless, considering the enormity of working out even these values using the methods then available it was still a remarkable achievement, and because of this all primes in the form are now called Marzanne primes.

The largest known prime that we have mentioned is of this type, and is the 28th known Marzanne prime. Now, we have mentioned that there are also 28 known perfect numbers, so does this mean there could be a link somewhere between the two? The answer is that there is, and the link is remarkably simple. It is such that for every Marzanne prime there is a corresponding perfect number, and it is found by the formula:

$p$	$2^p - 1$ (Marzanne prime)	$2^p$	$2^{p-1}(2^p - 1)$
2	$2^2 - 1 = 3$	$2^2 = 4$	$2^{2-1}(2^2 - 1) = 6$
3	$2^3 - 1 = 7$	$2^3 = 8$	$2^{3-1}(2^3 - 1) = 28$
5	$2^5 - 1 = 31$	$2^5 = 32$	$2^{5-1}(2^5 - 1) = 496$
7	$2^7 - 1 = 127$	$2^7 = 128$	$2^{7-1}(2^7 - 1) = 8128$
13	$2^{13} - 1 = 8191$	$2^{13} = 8192$	$2^{13-1}(2^{13} - 1) = 3355536$
17	$2^{17} - 1 = 131071$	$2^{17} = 131072$	$2^{17-1}(2^{17} - 1) = 85898560$
19	$2^{19} - 1 = 524287$	$2^{19} = 524288$	$2^{19-1}(2^{19} - 1) = 436465600$

Your entry must arrive at Dragon User by the last working day in November 1983. The name of the winner, and the solution to the puzzle, will be printed in the January issue of Dragon User. You may only enter the competition once. Entries will not be acknowledged and we cannot enter into correspondence on the final result. Please send your entries to Dragon User, 12/13 Little Newport Street, London WC2R 3LD.

## September winner

THE WINNER OF our September competition and recipient of a Ramax Superdata 1020 QWQ Business Machines and an IBM/2 interface from Concord Computers, is David Simon of Penryn, Maldivas. He correctly answered that the values of the dice thrown were 4, 4 and 5. This puzzle caused some confusion among readers, many of whom could give three possible answers but could not name a dice to give. Please who submit this puzzle and would like an explanation of how to solve the problem should write to Dragon User and we will send one out to them.

$$2^4(2^4 - 1)$$

The value within the brackets is also Marzanne prime, and this is multiplied by  $2^4$ . The table lists the first seven perfect numbers generated when  $p = 2, 3, 5, 7, 13, 17$  and 19.

As you can see the numbers are getting rapidly larger, and the perfect number which is derived from the largest known prime so far will be given by:

$$2^{4449}(2^{4449} - 1)$$

In addition to perfect numbers, there are also what are called multi-perfect numbers, where sum of factors equal two, three or more times that number. For example, the factors of 120 are 1, 2, 3, 4, 5, 6, 8, 10, 12, 15, 20, 24, 30, 40 and 60.

In dealing with multi-perfects the number itself is also included so the sum of the above factors plus 120 will equal 360. As this is three times 120, we say that 120 is tri-perfect. (Note that the perfect numbers we have so far considered would really be bi-perfect if we were to include the number itself as one of the factors).

The number 120 is the smallest tri-perfect. What is the next highest tri-perfect?

Wait, if I bought this one, could it tell me if I've made the right choice?

# Blood and Thunder!

Adventures for the bolder D32 owner

Mike Melneck's first saga for the more courageous Dragon-basher. Based on skill and cunning, rather than random elements. (Clue sheets available for trapped adventurers.)

## TEMPLE OF ZOREN

Nobody made it back alive yet, but Temon Security need plans of the defences and a sample of the new Zorean laser gun.
