## How to submit articles

The quality of the material we can publish in  
Dragon User each month will, to a very great  
extent, depend on the quality of the  
documents that you can create with your  
Dragon. The Dragon computer was designed  
on to the market with a powerful version of  
BASIC, but with very poor documentation.

Articles which are submitted to Dragon  
User for publication should not be more than  
5000 words long. All submissions should be  
typed. Please leave wide margins and a  
double space between each line. Programs  
should, wherever possible, be computer  
printed on plain white paper and be accom-  
panied by a tape of the program.

We cannot guarantee to return every  
submitted article or program, so please keep  
a copy. If you want to have your program  
returned you must include a stamped,  
addressed envelope.

## Contents

### Letters

A case of the apers, booting the (E)er,  
transatlantic troubles with Dragonquest,  
printer dump, and a fight of fancy

## Editorial

EUROCARD, the Spanish company which bought the rights to manufac-  
ture the Dragon, has appointed North London-based Compuserve as the  
UK distributors for the new, Spanish-built Dragons.

Eduardo Merigo, President of Eurocard SA, has gone on record as  
saying that he sees the future role of the Dragon as primarily an  
educational and small-business machine.

Ted Gpychael of Compuserve endorses that view. He said that his  
company will not be importing the Dragon 32, and instead will be pushing  
the Dragon 64 with disk drives as an entry level business machine. His  
view is that the Dragon is dead as a games machine.

Compuserve is lobbying Eurocard for the development of a new  
generation of Dragon micros and peripherals, based towards the  
business and home applications market.

Eurocard's plans for the future include a 128K machine, networking,  
and hard disks, all of which seem aimed more at the serious rather than  
the games side.

On the other hand, while software for the Dragon has been harder to  
find in the shops in the last six months, there are plenty of games on the  
mail-order market, as a browse through the advertisements in Dragon  
User will show.

Some companies have moved into the Dragon market after Dragon Data  
got into trouble — Incentive, for example, did well with Backback, and has  
just converted its best-selling adventure, the Ket Trilogy.

Eurocard and Compuserve may be right. Perhaps the future for Dragon  
does lie with the small business market. But on the other hand, there do  
seem to be large numbers of existing Dragon owners who want games.

Eurocard should be careful about being over-zealous in the attempt to  
move the Dragon up-market. A substantial potential customer base could  
quite easily be alienated by bald statements concerning the death of the  
Dragon games market.

Page, Dragon User, 12-13 Little Newport Street, London WC2H 7PP.

## On your uppers

IN REPLY to Mr Harrington's request for an alternative method for switching between upper-case and lower-case letters, the answer is quite simple. "SHIFT+O" (not "SHIFT+@") alters the alpha lock flag at address \$748 which normally contains the default setting BFF for upper-case letters. To enter lower-case from a program, all you need to do is clear the flag using either: CLR \$748 in assembly language or PORE\$H148.0 in BASIC. I suggest that you enter lower-case mode at the beginning of the program and then use the SHIFT key for upper-case letters.

I R Barker

## How to boot the Exec

THE FOLLOWING may be of interest to DRAGON USER readers who own Dragon 64s. Although it is easy to "Boot" from 32K mode to 64K mode, by entering "EXEC", it seems no provision is made to reverse back to 32K mode again. This is probably no real problem but it does mean that disk drive owners cannot make use of the extra memory and save their programs to disk, they either use a tape or do their programming in 32K mode. The following routine may therefore be useful as it allows a "Reverse Boot" to be made, from 64 to 32 mode, without loss of the basic program in memory.

Obviously the size of the program must not be larger than the memory available in 32K mode but large basic programs that contain a "POLEARM" or large arrays, which would normally give an "OM" error in 32K mode, can now be loaded, "Booted" into 64K mode, run (and edited if necessary) then transferred back to 32K mode for saving to disk.

First a short in-voice routine

must be saved on a disk (or tape) and kept for whenever the "Reverse Boot" is needed. This can be done using the following basic program:

```
10 PGR1 = $H7000 TO
   $H700E
20 READ A$
30 POKE LVAL("BHT"+A$)
40 NEXT
50 DATA $E,16-$D,$3,$3,
   $3$
60 DATA 16,$F,16,$F,1F,$F,
   0
```

After entering, type "RUN" then save the resulting in-voice to disk using:  
SAVE REVERSE.BIN,  
\$H7000,\$H700E,\$H700E

To go to 32 mode from 64 simply type PORE 115.0 and press reset (this will produce the familiar DRAGON copy-right screen) then, with the disk containing "REVERSE.BIN" in the drive, type "RUN" "REVERSE.BIN" and the original boot program that existed in 64K mode will be restored.

## Dragonquest query

I RECENTLY acquired a Dragon 64, in that we received three of them.

Our problem is that none of us can solve the Dragon Game that came with it. We have had quite a number of people try the game but none of us can quite solve it.

If you could possibly give us some clue (please don't say "try examining things") it would be greatly appreciated. The game is called Dragon-

quest and if anyone has any ideas on how to find the schematic, the hut, the ruby or the shield or where to use the shovel, we would really like to know.

Sam Tying,  
Barbara Sney  
6829 Woodman Ave  
Menlo Park CA 94025  
USA

## Dump to printer

I READ with interest Alan Wingley's article in the February issue of Dragon User about dumping the high resolution screen on an Epson printer.

I have a "HOC FT-500T" printer that is very similar to the Epson, so I entered the program, only to find that it would not work.

Upon closer inspection, I found this was due to the program using the ESC "H" instruction which my printer does not use.

I then set about modifying the program so that it would work with my printer, and I thought other readers may be interested in these modifications.

At the following six bytes at the beginning of the program, starting at location 7E55:  
87,7F,F4,55,48,30

Change these locations to:

```
7F18 : 88
7F1F : 1A
7F20 : 80
7F21 : 7E
7F22 : 55
7F23 : 57
7F24 : F3
7F41 : F3
7FF0 : 80
7FF3 : 18
```

The program now starts at location 3234H (7E55 hex) so when CLEARING space for it, the message is now:

```
CLEAR 28032340
When saving the program, the message is now:
CSAVEM "PROGRAMM",
32341,32767,32340
The routine is saved in the same way as before, ie:
PMODE$1,1,SCREEN,0
ENDC32347
```

## Flights of fancy?

BRAN/CADGE's flight simulator review contained two minor points on the T47 simulator.

As the flight progresses, the computer memory is gradually used up until the game crashes with an OM BRPCH, or at least mine does. On take off PRINT MEM = around 4000, and after a long flight PRINT MEM = around 100 to 200, hence the error message. The flight can be continued, losing no information, with a GOTO, when PRINT MEM = 4000 again, but this is not what should occur in a 68000 game.

Seriously, you can presumably fly forever, as no fuel gauge is included. But, being Basic, it is not too difficult to add the gauge to the engine cut-off and throttle control program lines. I've done this, and labelled the larger dial with their initials, which does improve the screen display somewhat.

Now, help required. Does anyone know the memory locations concerning the number of lives in Castle Software's 35 screen Fantasy Flight? I can't get beyond the first five or six screens with the five lives given. Otherwise it's an excellent game. Also I have a string of questions concerning The Ring of Darkness, so if anyone who has become fairly expert at this would care to contact me, postage would be returned along with my thanks and a list of queries.

# Eurohard — plans for the Dragon

THE DRAGON 32 is dead in the UK, but not in Europe.

That is the message from Eurohard, the Spanish company which bought the rights to manufacture the Dragon, and Compusera, the North London company appointed to distribute Spanish Dragons in the UK.

According to Juan Carlos Moreno, Eurohard's Head of PR and International Relations, the 32 will be made in Spain, unchanged from the original Welsh machine.

But Ted O'Connell of Compusera confirmed that the 32 will not be imported into Britain. "The Dragon 32 is still being sold in Spain, but it is not their preferred machine," he said.

Eurohard will also be continuing to sell the Dragon 64, both in its original form, and in a redesigned case with a new Spanish keyboard. There may also be keyboards for other languages.

The new version of the 64 will be renamed the Dragon 200, according to Senior Moreno.

Eurohard has a prototype of the 200, and may be showing it at the 1989 Show.

Compusera is committed to selling the Dragon 64 as an

Ted O'Connell of Compusera, entry level business machine, states Ted O'Connell.

"It is not total intention to push the 64 with disk drives. The only way forward for Dragon in this country is in a new market area."

Eurohard will not be manufacturing printers. Instead, it is likely that an externally bought printer will be marketed under the Dragon trademark.

Eurohard will be manufacturing a cassette recorder for use with the Dragon, aimed at the Spanish home market.

5 1/4" disk drives are being designed, with a 200K capacity. They will be compatible with the 32, the 64 and the 200, and have an official launch date of June.

Eurohard also has a 2.8" quick disc system in development, which should be ready by the end of April.

Compusera is unlikely to import the quick disc, however.

"I have my doubts about the applicability of this machine in the British market," Ted O'Connell says.

According to Senior Moreno, the sales of the Dragon in Spain are going very well. In the last three months of 1984, Eurohard sold 25,000 units, he claimed.

"The Christmas campaign was a little smaller than envisaged but that affected micros across the board in Spain, not only the Dragon," he says.

January and February were slow, but that was expected. Eurohard is apparently planning a new marketing tactic in Spain — door-to-door sales of the Dragon.

Ted O'Connell appears to believe that a 128K machine is in the pipeline, probably using CGE Level Two as an operating system.

"Towards the end of the year, some fairly attractive systems should be produced, especially if Eurohard put in the networking system," he says.

## Football crazy

ADDICTIVE Games has just converted its best selling file Football Manager for the Dragon.

Kevin Toms, who runs Addictive, was responsible for the conversion, and the program includes all the features which have made Football Manager number one in the charts across all makes of micro.

On the Dragon, Football Manager sells for £5.95.

Addictive Games are at 7a Redwood Hill, Bournemouth, Dorset BH2 9HS.

## Vidipix

VIDIPIX is a new company with two games for the Dragon, Jigsaw and Combat Air Patrol. The Corby based company also markets Dragon peripherals to order.

Jigsaw comes with four different screen pictures, which are randomly disseminated into 150 different square blocks. The objective is to recreate the picture.

Combat Air patrol is a flight simulator, with three separate sections. The first involves combat with other aircraft; then comes air to air refuelling, and finally landing.

Both games cost £3.95. Vidipix will also make a printer interface to order. Called the Printface, it changes to Centronics port to an RS232 printer interface. Full model versions may be available later. Printface costs around £35.00.

Vidipix is at 125 Occupation Road, Corby, Northants NN17 1LQ.

## Dark Star

DESIGN DESIGN has just launched a conversion of Dark Star for the Dragon.

Dark Star is a space combat

**DARK  
STAR**

*Design Design*

game played on a 16 by 16 grid. Each square is a section of a galaxy, and contains a certain number of enemy forces, fuel pods and such. Also dotted about the galaxy grid are various planets occupied by the forces of an evil empire.

The player's objective is to get through to each planet, destroy the planetary defences, and liberate the oppressed world. Only after freeing every planet is the galaxy from the yoke of oppression is victory achieved.

Dark Star will cost £7.95. For more information contact Design Design, 2 Ashton Way, East Hemmington, Sunderland SR9 3PL.

## Mail box

MAILBOX is a new program from Houston-based Harris Micro Software for the Dragon 32/64 with Dragonoids.

Following the success of the company's personal accounts program, Moneybox, Mailbox is a name and address database program, on a 40 column by 24 line screen.

It allows the user to store names and addresses with short notes or flags attached. The program can sort files, only printing those with common flags for example.

Also included are routines for merging and purging files. Mailbox comes on a Dragonoids disk, at £14.95. For further information, contact Harris Micro Software, 49 Alexandra Road, Houston, Middlesex TW9 4HF.

# DRAGON HARDWARE

**NOW IN STOCK**

DRAGON 32	£196
SINGLE DISK DRIVE — COMPLETE	£246
DOUBLE DISK DRIVE — COMPLETE	£396
UPGRADE KIT SINGLE TO DOUBLE DISK	£126
DOUBLE Sided 40 TRACK UPGRADE	£176
RAM CHIP	£26
DRAGON 64 SINGLE DISK FLEX EDITOR ASSEMBLER EDITOR BASIC	£499.99
DRAGON 64 DOUBLE DISK FLEX EDITOR ASSEMBLER EDITOR BASIC	£699.99
COLLEBRAL CAVE ADVENTURE FOR DRAGON 64 WITH DRAGON DELTA DISK	£2.99

## FLEX IS BEST

Of all the operating systems available on the DRAGON — FLEX is the only one to give you ALL of the following:

- 40K Bytes free user RAM
- 51 by 24 character Hi-Res Screen
- Supports up to four disk drives, Single Double Sided — 40/80 Track — Single Double Density
- Huge Choice of Available Software from Numerous Suppliers
- Compatibility with most DRAGON 32 BASIC and Machine Code software
- Fully Supported and Maintained in the UK
- Available for the DRAGON or DELTA Controller (and TANDY COLOUR)
- Reliable, Friendly and Easy to Use

### FLEX

For DRAGON or DELTA disk systems with Editor and Assembler **£98.95** special price with DBASIC **£99.99** a reliable and easy to use operating system. It is the ideal operating system for the DRAGON — especially when combined with our DBASIC package. Requires DRAGON with 64K RAM.

- 40K Bytes FREE USER RAM
- 51 by 24 Hi-Res Screen with true lowercase, autopost, reddefinable character sets, windows, etc
- Supports single and double density for interchange with other FLEX systems
- Includes over 20 standard utilities
- Powerful Macro Assembler
- Versatile Text Editor

### RMS

**£99.95**

A complete **DATABASE MANAGEMENT SYSTEM**.

Versatile and very easy to learn to use. Ideal for accounting, business records, management information systems, customer records, customised data entry, stock control and much more. RMS can be readily configured to do many different jobs which require data entry, online data retrieval/update and printing of reports without any programming knowledge. An RMS database is stored as a standard FLEX random file and is accessible to user written programs.

### FLEX UTILITIES

**£34.95**

An invaluable collection of useful utilities for FLEX including DEMO4, MCRUN/DO, stack disassembler, improved file copy, single sector copy, extend file, better DAT, change memory and, 5K memory, map binary file, graphics dumps, F2332 terminal interface — and more.

### DBASIC

**£99.99**

Disk BASIC for FLEX. Get all the benefits of FLEX and run existing DRAGON programs with little or no changes.

- Standard 32K DRAGON BASIC
- 32 by 14 Screen and 51 by 24 Screen
- Send Commands to FLEX from BASIC
- Use up to 8 sequential or random access files simultaneously
- BRANCH/GOTO statements to interrupt entries
- ERROR command shows you exactly where BASIC detected an error
- Load/Save programs as FLEX disk files
- Includes 5 example programs

### DYNAFAST

with DYNAMASTER DYNADREIF DRAGON BASIC COMPILER with Optimiser and Cross Reference Utilities

Cartridge **£29.95**  
Dragon DOS disk **£19.95**  
DRAGON FLEX disk **£19.95**

### EDIT +

EDIT+ is a Full Screen Editor and Programmer's Tool Kit. It's an excellent aid for writing programs in BASIC and is easy to use for the novice as well as the experienced programmer. EDIT+ includes all the facilities of 16-BEG, up to 22 lines of your program are displayed on the screen and can be changed by controlling, inserting, or deleting characters. Functions include: Find String, Change String, Copy Text, Goto Specified Line, Scroll up/down, Append From Tape and Enter Basic Command. No Dragon's is complete without an EDIT+.

Cartridge **£34.50**  
Dragon DOS disk **£34.00**  
Dragon FLEX Disk **£19.95**

### CROSS ASSEMBLERS

FOR ANY FLEX SYSTEM

68002 68013 68010 each £800/£800/£280 macros, library file calls — all the features of the FLEX 6802 assembler

£81.75 each **off £7 for £294.25**

## Scrabbling for points

**Programs:** Linkword, Darts Computers, PO Box 318, Stoke-on-Trent ST6 6DS  
**Price:** £3.50 each

TO WIN an epic tale, however good, on TV after having seen it in true shape and size on the big screen is often something of a disappointment. The same is true of versions of real games remade by computer. *Linkword* and *Darts* are cases in point.

*Linkword's* computerised Scrabble, Dennis will admit,

nothing that cannot be had from a £3.99 "real" scrabble.

There is no "acceptable word set" which would delineate the words you are allowed to use (obviously for reasons of memory) and no check is made to allow illegal moves (a new word not connecting with any already on the board, for example). The game does feature a delay so that opponents can object to a move, however.

*Linkword* seems to be an excellent program, with much enjoyment to be had from it — but it's not a patch on the real thing.

My caveat about *Darts* is much the same. A si-

mle, the speed of the program is OK, and the players can have some fun. The variations involved in aiming a dart amount to much more than could ever be simulated in a program.

Once again Computers have produced some excellent coding maximising the fea-

tures of the Dragon in all respects. But the games themselves are but pale imitations of the real things.

Mike Harrison

## Joust a minute

**Programs:** Sky Joust, J. Morrison Monco, 4 Rein Gardens, Tingley, W Yorks WF9 1JH  
**Price:** £3.95

SKY JOUST is loosely based on the arcade game "Joust". The game involves controlling your Datch in a duel against other birds, snakes and rattles using your laser lance to zap them. Failing to kill birds will result in them landing and laying eggs which eventually hatch into even more baddies.

The game begins with just one bird to kill and becomes

progressively harder as you continue with a total of three different screens. Mode 3 graphics are used and are quite impressive, but by no means the best that J. Morrison has produced, and apart from the music on the title screen the sound effects are unimpaired.

The best thing about this game is its price — just £3.95. The software is not as sophisticated as other versions, such as *Barren Bell* by Microval and is therefore not so addictive.

Brian Coope

## Blockbuster quiz

**Program:** Blockbuster, Computers, PO Box 318, Stoke-on-Trent ST6 6DS  
**Price:** £3.50

WHEN Charades and Passwords Block have worn a bit thin over Easter and you've put off that walk you were going to take, the family might turn to a quiz for some competitive entertainment.

They could do worse than play *Blockbuster*, which follows the style of the TV game of the same name. The idea is to guess answers beginning with a given letter, and trace a route from one side of the screen to the other.

Computers present the quiz in an efficient and compelling way. Just as in the TV game, you may try to guess the answer before the question is complete — but something like "what W is the opposite of..." can leave you in a mess. If you are wrong, your opponent gets the full question. A time limit also applies.

The data is cleverly ordered such that even on completing a round the same questions do not come up again. There are 500 questions altogether to keep you going.

If your general knowledge needs repair or you are a quiz fan, this could be the one for you.

Mike Harrison

In real Scrabble, you make your own destiny — you choose the tiles, you try to outguess your opponent. The factor which gives most satisfaction in the game is physically handling the letters, arranging and rearranging them on your stands. Keeping the score also gives little Johnny something to do between turns.

How much of this is denied to players of *Linkword*. Your letters are chosen by the computer and displayed on the screen for all to see. Your score is automatically added to your total and the double and triple letter and word squares automatically accounted for.

Now all of this does add up to some real programming. Letters can be placed on the multi-coloured board via a cursor, and options exist for players to exchange any number of letters for others unseen in the pool. End-game facilities are strong.

Even so, all of this adds

resolution dart board is of the mercy of a cross between John Wilson and a Catek, whose right arm is under your control. The light of the released dart is shown, and its hit point on the target shows up as a dot.

The hardest part of playing real darts — the subtraction — is taken care of by the computer.

The on-screen player can be moved to any part of the screen for better trajectory. The normal rules for darts are adhered to, including the need to end on a double or bull's eye.

The PMODE 4 graphics are

# Write on!

Phil Brooks shows how to mix text and graphics on your Dragon

SEVERAL ROUTINES have been published which attempt to overcome the Dragon's inability to mix text and graphics. Most utilize the "Draw" command to build up the text on the graphics screen. This is a slow process, and if any flexibility is required then a great deal of memory is taken up by all the strings required for a complete set of alphanumeric characters. If lower case is also needed, then even more space is lost. The machine code routine in Listing 1 provides a fast, flexible and lively way to display upper or lower case text and user designed graphics. It provides, with the added bonus of double size characters in MODE3.

## WRITE

The machine code contains an extension to the Dragon's Basic interpreter which allows it to recognise the new command "WRITE". This is almost exactly analogous to the usual "PRINT" command, with one or two exceptions. The characters are made up of an 8 x 12 matrix, the lower case letters having true descenders, and WRITING can begin on any of the 192 lines of the screen and in any of the 32 columns by means of the command WRITE (x) y, exactly as in PRINT (x) y. In this instance, y defines the upper edge of the first character to be written, so that to move down the page by one text line x must be increased by 12+32. As with the PRINT command, x can be a constant, a variable or an expression, so that WRITE (X) 15+32\*12+5, SP5 will place SP5 in the fifth column of the fifteenth text line, if there is insufficient space at the bottom of the screen for the first character to be written, or if the position specified is outside the screen, then a BS error will be flagged. If, however, the start position is within limits but the string to be written exceeds the space available then the entire display will scroll up until there is enough space for a complete line of text.

In order to simplify the coding as much as possible, the WRITE command can only operate on strings. To display a constant or a variable it must first be stored

as a string, so to write the value of the variable Z3, use Z3\$=STR\$(Z3) WRITE Z3\$. Pre-defined or immediate strings are accepted, but string manipulation is not possible. Thus 10 WRITE "FREDERICK" and 10 PRED\$="FREDERICK" 20 WRITE PRED\$ are both acceptable, but WRITE PRED\$+"THE GREAT" or WRITE CHR\$(2) are not. Single letter string names, such as A\$, are not accepted, and will cause a SN ERROR. String arrays are not directly accessible. The required element of an array must first be defined as a simple array, as in PLACES=1 TO 1632, 2 WRITE PLACES.

As with the PRINT command, the line terminator "\n" or "\r" can be used to control the write position counter. Two or more strings can be included in one program line if they are separated by one of these separators, as in WRITE A2\$-THC", D5\$. The write position counter is initially set at 0, but is not less than a PCLS. It can be reset by using WRITE (0) 0. The WRITE command cannot be used in multistatement lines except as the last statement in such a line.

Lower case letters are accessed by means of the shift 0 key, and during programming appear as inverted (green on black) capitals. As well as the full alphanumeric character set (upper and lower case) the program also contains a number of user definable graphics. These are accessed by using a program line such as

```
10 ALPHA$=CHR$(10)WRITE (0) 0X00,ALPHA$.
```

The program in fact contains 122 characters. Listing 2 will enable you to redefine any of the characters to your own specification, and to display the full character set complete with the appropriate ASCII code for each character. For ASCII codes below 32 and from 91 to 96 inclusive the string to be written must first be defined using the CHR\$ function as described above. The character set as described in Listing 1 contains 10 special characters. CHR\$ (0) to (9), which may be used to display the numbers 0 to 9 when in MODE3. Some string manipulation will be necessary, but it will make it possible to

display a running score in a game, for example. CHR\$(10) to (31) inclusive have been pre-defined as the most used Greek letters, but like every other character, can be redefined using listing 2.

In addition to its use in graphics displays, the routine can of course also be used in text displays.

It is possible to write a complete program in which the normal text screen is never used. Listing 2 is an example of this, and a study of the tabulations in which a string is input to the program without using the normal text page should prove useful.

## OWRITE

The routine also recognises three other commands, all with the same structure, limitations and syntax as WRITE. These are: OWRITE, for when it is required to superimpose text on an existing graphics display; IWRITE for producing inverted characters, in this case black on green or black on buff; and finally DWRITE, which contains the bug. The use of OWRITE or DWRITE in MODE3 may produce rather strange results.

The routine automatically corrects for whichever page of the graphics memory is in use, so that the WRITING position remains constant.

Naturally a change of page after a string has been WRITTEN will result in the screen position of that string changing along with the rest of the display, if MODE3 is called with the write position counter set at the bottom of the PMODE4 page then a delay will result while it is scrolled to within the normal page limits. The cure is to specify the required position by means of a WRITE(y) command.

After typing in listing 1, and before RUN/ENDS 0, CSAVE 0. The checksum method used will be 80 per cent of all known bugs, but is not foolproof.

After the program has been RUN type in EXEC 30596, and your extension interpreter will be installed and running. It has no effect on the speed of normal BASIC programs, as it only comes into use when the normal interpreter means an unfamiliar command. To save the machine code, type WRITE(0) 0 to reset the position counter, followed by CSAVEM "WRITE". 30596,30767,30596.

Remember always to CLEAR 30596 before reloading the machine code file, and to EXEC 0 once loaded. If Listing 2 is used to redesign characters then the entire listing should be reaved. Listing 3 is a simple demonstration program to display some of the features of the routines.

# CUMANA Special Price Offer!

## DOUBLE DENSITY DISK INTERFACE FOR THE DRAGON 32/64 FROM CUMANA

Dragon owners take full advantage of the speed, convenience and reliability of Cumana's 5 $\frac{1}{4}$ " or 3 $\frac{1}{2}$ " floppy disk drive systems (storage capacities of up to 1.6MB). Cumana are now offering 4 complete systems which come complete with a double density disk interface for the 32/64.

### SYSTEM OFFER 1:

Double density interface with Cumana's 5 $\frac{1}{4}$ " DS 250 single drive  
**£189.95**

### SYSTEM OFFER 2:

Double density interface with Cumana's 5 $\frac{1}{4}$ " DD 500 dual drive  
**£304.95**

### SYSTEM OFFER 3:

Double density interface with Cumana's 3 $\frac{1}{2}$ " DS 315  
**£199.95**

### SYSTEM OFFER 4:

Double density interface with Cumana's 3 $\frac{1}{2}$ " DD 352 dual drive  
**£289.95**

Limited offer, all products are subject to availability.  
All prices are inclusive of VAT.

### ORDER FORM

TO CUMANA LIMITED THE PRIDE TRADING CENTRE, BROAD  
STREET, DULFORD, SURREY GU2 5BH, TEL. 0492 500461.

## SYZYGY

**NEW FROM MICRODEAL**  
**DRAGON 32/64**

You are trapped aboard a section of the Deathstar! You have already had one near fatal encounter with " Vader " and another could prove disastrous. He's somewhere nearby guarding the central computer which just happens to hold some information essential to your survival. To have any chance at all you must find and retrieve your light sabre, presently being guarded by one of Vader's huge ugly aliens. Gosh ... there is just so much to do ... over 250 different graphic pictures and 300 locations make this our best ever graphics adventure. 1 joystick required for light sabre fight. 64 different commands, 128K machine code ... **Page Flip graphics, Post & Packing 50p £8.00**

**NEW FROM MICRODEAL**  
**DRAGON 32/64 & TANDY COLOUR 32K**

## SPEEDRACER

Atari & Commodore 64 owners, eat your hearts ... this has got to be the best Grand Prix game ever. Fast action, super smooth scrolling "vector" graphics, and loads of serious thrills ... 4 circuits to choose from, a tyre change if they burn their speed too quickly, that is set number of cars to pass in order to qualify. Its fast and very very good. 1 joystick required. **TANDY COLOUR**

**Post & Packing 50p Tape £8.00**

**SMASH HIT FROM MICRODEAL**

## Mr. DIG

**DRAGON 32 ATARI 32K & COMMODORE 64 TANDY COLOUR 32K**

Everybody's favourite "MR DIG" must dig for the hidden food supplies in the "MEANIES" territory below the ground. As Mr-digs he can eat cheese or crush the "MEANIES" with apples. Special treats carry MR DIG extra points and a magic power ORB can kill the "MEANIES".

Full colour Hi-Res graphics ... **Tandy Colour**  
 1 joystick required **version available from**

**AMCROMAIL Tape £8**

**NEW FROM POCKET MONIES Software**

## PIT FIEND

You are stranded on the middle floor, of a five floor maze and your task is to find the pieces of a broken shield, which are strewn around the maze.

As if this wasn't enough there are pit fiends after you one touch from which is fatal and also there is a limited supply of oxygen. A terrific game.

**DRAGON 32**

Keyboard only.

**Post & Packing 50p**

**GREAT VALUE AT £1.99**

## TO ORDER

# Correcting the faults and problems with Dragondos

**P G Scott** solves the problems that face uneasy users of Dragon DOS.

FOR SOME TIME it has been known that there are a number of faults and problems associated with DRAGONDOS 1.0, ever and above the documentation. This article is intended to identify and highlight some of these problems and propose solutions (which have been running successfully on my own system). While I do not advocate "patching" object code, in this instance, without the source, there is no alternative.

The rest of the article has been separated into three areas:

**Faults**, where the system performs erroneously and it is not possible to overcome the error without manual intervention.

**Problems**, where it is possible to program around the problem or there is need of information not provided in the manual, and

**Lack of information**, where facilities exist that are not documented.

In what follows, a single sentence description of the error is given followed by explanation of the cause and effects of the error together with a simple test, if applicable, and a patch to correct the error. Within the patches, the format is:

+xxxx yy zz

where +xxxx is the location address in the EPROM and corresponds to run-time address &HC000-&Hxxxx and yy zz are the Hex values to be programmed into consecutive locations.

## FAULTS

**Fault 1:** USF009 address is corrupted and Drive 4 is not set to "unused" at RESET.

These two faults have no apparent link, but are actually caused by a single erroneous byte in the RESET initialization sequence. As a result of the error, any attempt to use the USF009 function before setting the address will cause program corruption rather than TPC error, while a change of disk format (from single sided to double sided for example) will not be detected for drive 4, but will for the other drives (see hints).

It is possible to issue commands to cancel this fault, but it requires the sequence:

POKE &H0A3 : DEF LOGO=&H0000  
to be obeyed after EVERY test.

Test: A-USF009(A)

Patch: +00FF

**Fault 2:** System "hangs" if in graphics mode and drive not ready.

This error occurs because the system tests for graphics mode (for some unknown reason) and, if set, waits for an interrupt which cannot occur. This can be avoided by ensuring a disk is always available when in graphics mode.

Test: SCREEN 1,1 : DM

Patch: +0200 21

+0310 31

**Fault 3:** Directory track 16 update failure—results are not predictable.

After writing to disk, directory track 16 has to be updated to match track 20. The effect of this fault is that a failure while reading track 20 or writing track 16 will cause the processor to return to a random address as the stack is not reset properly; this can only be fully overcome by applying the specified patch.

Test: POKE &HAB,1 : EXEC  
&HC734

with a) no disk, and b) disk  
write protected

Patch: +B771 20 21

+B780 5F 32 48

+B7A8 30 48

**Fault 4:** Track 19 sector 36 is corrupted when files are killed.

This fault is only encountered when using double-sided 80 track disks. Directory sectors 1 and 2 contain a "bit map" showing whether a disk sector is in use or free. When a file using sectors on tracks 43 to 76 is "Killed", the sectors allocated to it are returned for re-use, but track 19 sector 36 is written instead of track 20 sector 2. This can only be corrected by applying the patch.

Test: DM : CREATE "FILE" &H0000

: KILL "FILE.DAT" : DM

Patch: +B027 31

**Fault 5:** Filename validation exits to the BASIC error routine.

This error only affects machine code users, as calling the file specification validation routine will exit to BASIC if a TON error occurs, instead of returning the

error code in the B accumulator (the method of using this and the other 17 routines available to machine code users will need to be the subject of a later article). This is only correctable by applying the patch.

Patch: +B002 25 04 01 04 33 04  
C5 20 30 12

**Fault 6:** BASIC file protection and rename routines addressed instead of the machine code routines.

This error only affects machine code users, as the routines referenced in DRAGONDOS 1.0 use the "character getter" routine at &H0F to get a file specification and return to BASIC if a file protection or rename error occurs. The routines that are called by the BASIC commands and should be called from machine code can be used by making the changes detailed.

Patch: +001C 00 00 0F

**Fault 7:** Errors in freeing a disk buffer cause routine effects.

As there are only four disk buffers available, accessing more than four files requires these buffers to be re-allocated. This fault occurs when writing to a file to free a disk buffer for re-use. If a failure occurs, the stack is not reset properly and the command returns to a random address. Only patching the EPROM will correct the fault.

Patch: +10B7 27 03 07 01

**Fault 8:** Only five files may be opened by a BASIC program.

The manual states that 10 files may be open at one time, clearly in conflict with the actual situation. It is caused by allocating file control blocks to "BANK" files (whether a "BANK" file is created or not) and not freeing them when no longer required. Without a re-write of DOS, it is not possible to totally eliminate this fault, but the patch described will allow 10 files to be referenced (note that "Killing" or "PPOTECTING" a file counts as a file reference, while "CREATING" a file with backup counts as two file references).

This patch also has the effect of removing one carriage return from the end of the DRAGONDOS sign-on message, in order to gain sufficient space in the EPROM.

Test: FOR I=1 TO 10 : PRINT I :

CREATE "FILE" : CHR\$

# What's your best source of information on color computing?

# HOT CoCo

Now you can improve your color computing skills... and it's easy to do. HOT CoCo gives you more practical information on the Dragon<sup>®</sup> than any other publication. Nearly 150 pages a month!

Every issue is packed with exciting new things for you to do. We won't waste your time with filler stories. You'll get instructive columns:

- **Linear's Arcade**—enjoy old-fashioned arcade style games on your computer
- **The Basic Book**—learn everything you need to program in Basic
- **The Educated Guest**—discover how to use your computer as a teaching tool
- **Doctor ASCH**—get answers to your technical questions
- **Graphically Speaking**—create eye-catching designs that add appeal to your programs

You also get a dozen easy-to-understand articles every month. Games... utilities... programming techniques... tutorials... graphics... education... hardware projects. They'll help you expand what you can do. And complete program listings show you how to use what you learn.

That's not all. HOT CoCo saves you money too:

- Candid reviews help you make every purchase a sound investment.
- Informative ads let you comparison-shop from home.
- New-product announcements tell you what's available before it reaches the stores.

With all this at your fingertips, your subscription could pay for itself with one wise purchase.

And HOT CoCo is risk-free. If you don't like your first issue, just write "cancel" across the invoice and return it to us. You won't owe a thing.

Subscribe to HOT CoCo today. Twelve big issues are only \$44.97 (US funds drawn on a US bank). Simply fill out the coupon below and return it right now to: HOT CoCo Subscription Dept., PO Box 975, Farmingdale, NY 11737, USA.

Dragon is a registered trademark of Dragon Data Ltd.

**YES!** Help me improve my computing skills. Send me 12 issues of HOT CoCo for \$44.97 (US). I understand that with payment enclosed or credit card order I will receive a **FREE** issue, making a total of 13 issues for \$44.97 (US).

Get a 13th issue **FREE** when you enclose payment or charge it on your Mastercard, Visa, or American Express.

```

**Fault 9: CLOSE always closes all files.**  
This fault also contradicts the manual. Indeed CLOSE #-1 closes all disk files as well as the cassette file. The faulty for selective closure was partially programmed and never implemented, however.

**Patch:** a patch requires correction of problem 2 first will permit the CLOSE command to operate as described in the manual. In addition, the patch uses SHFT as a control and if this is set to a non-zero value the patch will close the last file referenced, provided CLOSE has a parameter in the range 1 to 4. Patch b ensures that CLOSE operates as described in the manual after a reset or "DISKINT".

The suggested method of closing individual files is as follows. Use POKE SHFT,1 to turn on the faulty (and POKE SHFT,0 to turn it off), then in the cassette state use

```

CLOSE DOF ("FILE",DOF("last"))
to close the file only when the end of the file is reached (CLOSE 0 is ignored), or
CLOSE #+DOF ("FILE"),#+DOF("last")
to close the file independent of the DOF condition (note that more than one parameter may be specified with CLOSE). The use of DOF here ensures that the required file is the last accessed. This method has to be used as CLOSE will only accept numeric parameters.

```

**Test:** FREAD "FILE",AS : PRINT AS : CLOSE #+1 : FREAD "FILE",AS : PRINT AS

**Patch a:** Correct problem 2

```

+059C 99
+05FC 99
+176B 5D 0F 0C 0F 0F

```

**Patch b:** +09C8 0C 84 03 04  
6D 02 0D 08  
+60D4 12 12

**Fault 10: Disk motor control assumes CP set to zero.**

This fault affects machine code users, where use is made of direct pages after this page zero. The motor countdown routine assumes that CP = 0 for tests on the flag, and can cause data or disk corruption if this is zero.

**Patch:** +0700 20 22  
+71E 20 00  
+724 34 04 0F 0F 08 0D  
06 20 05 25 04 0E 0D 3D

## PROBLEMS

**Problem 1: LOC/LOF/FREE functions sometimes return a negative value.**

All three functions use the same routine to convert a 24 bit integer to BASIC numeric format. Because the sign is not cleared, this routine returns a value with the sign of the value calculated immediately before calling the function. It can be corrected by applying the patch supplied

or using the ABS function to ensure a positive value is returned.

**Test:** PRINT #+1:FREE or #+1:-1 :  
PRINT FREE  
**Patch:** +1094 1E 0F  
+1096 0D 03  
+109E 0D

**Problem 2: INPUTLINE/INPUT cause all disk files to be closed.**

If you have tried writing a simple file edit program, you will have met this problem. It is caused by the need to ensure all files are closed at the end of a program. The problem can be overcome by using LOC and FREAD FROM to reset the read pointers (WRITE does not suffer from this problem), or by applying the patch to correct problem 1 above and then applying patch a. Alternatively, without applying the problem 1 patch, memory can be reserved from SHFT-CP (for example) containing patch b and the task vector changed by using

```

POKE SH182,000 : POKE SH184,SHFT :
POKE SH182,SHFT : POKE SH184,SHFT

```

This patch is position independent, so can be put anywhere in memory, provided locations SH182-4 are set accordingly. This change will remain effective until a cold start occurs.

**Test:** FREAD "FILE",AS : PRINT AS : INPUT BS : FREAD "FILE",AS : PRINT AS

**Patch a:** Correct problem 1

```

+1A87 8D 03 05 7E 06
02 34 06 0D 03 7D AC
08 26
+1AC5 05 0D 06 08 3D
0E 05 04
+1EAD 04 0D

```

**Patch b:** +0F0F 34 06 0D 03 7D  
AC 06 06 08 0D 04 08  
7E 0D 35 35 04

**Problem 3: "BASIC" can create a file entry which cannot be "KILLED".**

This is an avoidable problem, but can occur if ENTER is set instead of -. The remedy is to alter the directory entry for the file (by using FREAD and WRITE) to a name that will allow the file to be killed. The alternative of marking the directory entry as killed is not recommended as this does not return any sectors allocated to the file. The patch listed rejects a null file specification as DOS error.

**Test:** SAVE -  
**Patch:** +070E 7E 0F 03  
+10F3 20 28 03 C4 06  
28 06 06 04 7E C7 C3

**Problem 4: Files "KILLED" within a program are left open, causing data written immediately after "KILL" to be lost.**

This problem can be overcome by inserting extra program statements around the "KILL" either to create a zero length file for the same name before or after "KILL" (provided a ".BAK" file does not exist that is still required, as this action causes the ".BAK" file to be killed), or to close all files after "KILL" is used (remembering to retain any input file pointers through LOC). Alternatively, the patch listed can be applied (after correction problem 2 above). This patch also pre-

sents sectors being "lost" due to a TPC error occurring when attempting to write to a zero length file after it is "KILLED" in a program. It also returns the file control block for re-use on completion of the "KILL" command (see also fault 6).

**Test:** AS="FILE.DAT" : FWRITE AS:"TEST":KILL AS : FWRITE AS:"NEXT LINE"

**Patch:** Correct problem 2

```

+1720 8D 03 03 20 06
+1720 27 04
+176B 3D 05 12
+176F 3D 08 12

```

**Problem 5: Drive (other than drive 0) incorrectly assumed to be restored to track zero at first access.**

With this problem, the first drive access after startup assumes the head is at track zero and steps on 26 tracks to read the disk format from the directory, then corrects by stepping a restore and stepping correctly to track 26. This can cause the drive to attempt to step beyond its last track. The patch described restores the drive to track 0 the first time it is accessed after startup.

In order to insert this patch, some reset features have been changed — Drive 0 no longer restores to track zero at switch on, the copyright and DRAGONDOS messages all remain on screen and the system becomes ready more quickly.

**Test:** DR 3  
**Patch:** +009E 0E 0F 0A 0D 06  
05 7E 03 71 47 0E 16 0D  
44 3D 07  
+00AE 0C 01 05 34 02  
3D 02 36  
+1197 0D 03 47

**Problem 6: "BACKUP" to an unformatted disk is not allowed, "DISKINT" does not check for a formatted disk, and "DISKINT"/"BACKUP" are available in program mode.**

Lack of free space in the CPM/MSD prevents patches to correct or change this remaining group of problems, which are included for information (and warning).

## HINTS

The "FWRITE" command uses "PRINT", with SHFT set to 1, to output data to the disk. Hence ANY "PRINT" format is acceptable after the filename parameter and delimiter; for example FWRITE "TESTFILE",ASCII:TEST LINE FOR FWRITE ARE 44 73 14

As "PRINT" uses the character output routine accessed through (SHACC), it is possible to use this routine to output to disk from machine code programs. However, this requires knowledge of other routines accessible within DRAGONDOS and is beyond the scope of this article.

The disk directory contains information on the disk format (number of tracks and sectors) which is loaded during the first disk access after a reset.

Thus single/double sided disks may be interchanged in a double sided drive and will be updated correctly (provided either the system is reset or logon (SH00E = drive number) is set to zero between disk accesses).

# DRAGON OPEN FILE

Send us your Dragon programs, beginning with a general description and then explaining how the program is constructed. Take care that the listings are all bug free, enclosing a cassette and, if possible, a printout. We pay \$8 for each original bug-free program published, double for the program of the month. If you have any problems with the listings, please send your queries to the appropriate author, Dragon User, 13-13 Little Newport Street, London WC2N 1PP.

## Flash

From Ashley Watson

THE FOLLOWING 330-byte machine code program gives the Dragon 32 an extra command to flash certain words etc on the screen at a certain speed even while the Dragon is doing something else.

To use the routine type in the BASIC listing — being one, if the data statements have been entered correctly then the program should be saved on cassette. If the message ERROR IN DATA appears then the data should be rechecked and RUN again.

The machine code is saved on cassette with:

CSAVEM "FLASH" 32300,32330,32300  
(ASIC should then be typed to initialise the new command). The new command which is created is PRINTF. Note that there is no space between the PRINT and the F. To use the command see the examples below:

PRINTF@200,"test";

This would flash the word test on the screen at position 200. The PRINTF has the same features as the PRINT command except that it flashes characters on the screen. If you wish to use the normal PRINT command and you wish to print the variable F then there must be a space between the PRINT and the F, for example PRINT F.

Location 32000 is the flash rate. This is the number of interrupts which will occur between each flash and is a number between 1 and 255. As 50 interrupts occur every second then

POKE 32000,25 would give flash every half second. To stop the flashing type

POKE 32000,0

as in the following example:

```
10 PRINT "press enter to continue";
20 INPUT A$
30 POKE 32000,10
```

This example will cause the message to flash on the screen until ENTER is pressed, the message would stop flashing.

Listing 2 shows the assembly listing of the program and may be typed in if you have an assembler.

SPECIAL OFFER for limited period. New price £34.99 inclusive

# TOP VALUE LIGHT PEN

## DRAGON 32/TANDY COLOUR 32K/SPECTRUM 48K

THE NEW ADVANCED PROGRAM  
for the Trojan light pens include the following facilities-

- \* DRAW BOX
- \* DRAW CIRCLE
- \* DRAW LINE
- \* DRAW PICTURES FREEHAND
- \* COLOUR FILL DESIGNATED AREAS
- \* SAVE AND LOAD PICTURES TO AND FROM TAPE
- \* FULL ERASE FACILITIES

All in Hi-Res screen in any of 4 colours for the Dragon/Tandy, and 8 colours for the Spectrum.

- \* DATA ENTRY AND PROCESSING
- \* MENU SELECTION AND CONTROL
- \* GAMES PLAYING

This is a first-class program which gives hints and tips on how to write programs for the pen. Ideal for many educational uses.

A top quality pen plus a first-class program. The best value pen package available.

# Ket Trilogy Special Offer

The Mountains of Kat, The Temple of Ynab, and The Final Mission form the Ket Trilogy, one of the classic adventure series.

Previously only available for the Spectrum, Incentive Software has now converted the trilogy for the Dragon. On one tape, all three programs are £8.95.

Now Incentive, in conjunction with Dragon User, offers readers the chance to buy the Ket Trilogy for only £8.95 — that's a saving of £1.00 off the recommended price.

Just fill in the attached coupon and send your cheque or postal order, made payable to Incentive Software, to the address given.

This is a special launch offer, and all coupons must be received by June 30.

## Payment Method:

- ☐ I enclose a cheque payable to Incentive Software
- ☐ I enclose a postal order payable to Incentive Software

## Dump

Fluorescence Microscopy (FISH)

4.5: the program is within the screen dump  
is in single density mode .... change line  
50 to the following for double density  
mode:

```
50 PRINT -S,CHR$(I)      (27)
   CHR$(I),CHR$(J),CHR$(K),CHR$(L),CHR$(M)
```

Received 15 November 2005; accepted 15 November 2005  
Published online 12 December 2005 in Wiley InterScience (www.interscience.wiley.com). DOI: 10.1002/anie.200525505

before running the program, LISTING 1 is the screen dump and LISTING 2 is an example machine code routine which when EXECUTED will invert the high low screen. This is useful if you want a "negative" of the screen. To use the dump first load a game or screen you like, press **TEST** (your picture will still be in memory), then type in LISTING 1 and run it. The program will show you the screen as it during. You wanted the program to fairly show material in its double density, so go off and have a look at itself.

The system has numerous benefits. First, because the

LISTING 2 and run it. The code is now in memory, so just type EXEC 3000 to use the program.

A point to note — due to the garden used a 'G' is used in place of the 'H' in the name (Garden).

If data readers would like to experiment, line 80 controls the position of the dump on your paper. Line 120 controls the "Y" depth of the dump. Interesting results are obtained when loading a probe 3 screen and calling up probe 4 before dumping the screen. This is because of line 70 which checks to see if a value is on or off.

# MIKE GERRARDS ADVENTURE TRAIL

LOTS OF letters are now arriving every month, and it's surprising to discover how geographically wide the Dragon user-base is. Why, only this month I received a letter from The Orion Nebula, which the postmark suggests is just outside Matherwell. Does the GPD know something Patrick Moore doesn't? Three correspondents from Orion offer advice on *El Dablero*, such as making regular use of the words **REMEMBER**, **DREAM** and **EXAMME**, and they're seeking advice on *Escape From Pulsar 7*. Next time you're near the Nebula, why not call in on the God of Psychodelia and his chums?

Moving slightly nearer home, Lionel Depoux of 5 rue Henri Martin, 95500 Armentières, France, needs some help on *Return of the Ring*, but has just completed *El Dablero*, so if you want to trade clues write to Lionel, who sends very funny letters. He wonders if anyone is still sane after playing *The Chastelard Incident*, and his English is so good I think he must have secretly acquired a Satel Fish from some other adventure.

Bob Bernazzoni of 16 Woodland View, Larnivel, Bostrom, Cornwall PL20 5HQ asked me how to get rid of "that flopping snake" in *Shenagans*, and I advised him to try **ICORNHATS EHT GNEPPORD** (read the clue backwards if you want to know the answer). Bob also wants some general tactical advice on *Ring of Darkness*, so anyone who can shed some light on finding Sheds, get in touch, but do send a stamped addressed envelope if you're writing to anyone whose address I include, especially if you're asking for advice.

That certainly applies if you're writing to Jane and Alan Kennedy, who seem to have completed every known Dragon adventure, and some unknown ones besides. "We consider *El Dablero* and *Anle* or *Porto* the best adventures that we have played so far for the Dragon," they say. I can't share their enthusiasm for the latter, but everyone's for their opinion, and they are kindly offering to help anyone out of sticky corners in the likes of the Franklin trilogy, *Keys of the Wizard*, *Death Mines of Sius*, *Crypts and Maworks*. No room to list all the titles, but whatever you want help on you can always write to me and if I'm unable to assist you myself I shall refer to my ever-increasing database of clues and addresses (don't tell the editor, but I'm doing it on a Commodore 64, so I can have

both the database and the Dragon working at the same time). Meanwhile, Jane and Alan's abode is 6 Portland Row, Edwinstowe, Notts NG21 5UL.

There's rather a sorry letter from Kieran O'Sullivan of Ballyvaugh, Nine-Mile-House, Carrigrohane, Co Tipperary, Eire, who's finding it very hard to track down Dragon adventures (over there in Eire, with shops winding down their shutters). Kieran's also stuck in *Circus Moon*, so if you can help him find some equipment, or maybe would like to swap some adventures if you've finished with them, then Kieran's your man.

A tip from Mark Geddy of Pamberough on *Death Mines of Sius*, the arcade-adventure combination from Phoenix. If you can't get through the arcade game to discover the hunting code for the adventure, then don't type **CLADAR** but by instead **SHUFF** "G" **CLADAR** "G" and then **LIST** the adventure plaintext, though this does also let clues for the adventure. And a tip too from John Martin of Peterborough. Before you EXEC any machine code adventures, type **MOTOFORN**, **AUDITION** and adventure away to your favourite music. Yes, play Madness while playing *Madness* and the *Motoforn*, or Black Sabbath with *Black Sanctum*. Any other suggestions?

I'll have to be brief with the next few letters, or I'll never make it to review the new Scott Adams. Help on *El Dablero* offered by John Bowen, 72 Manor Drive North, New Malden, Surrey KT3 5PL, and by Peter Ward, 7 Bakery Way, Landbury, Barnetgate, N. Devon, and help's wanted

on that one by Helen Johnstone, 48 Chatterworth Drive, Rushmore Park, Ipswich, Suffolk IP4 5SD. David Holmes of Marlford and Paul Edwards of Manchester both praised Ken Kalish, the author of *El Dablero*, and if you haven't tried it get them Microdeal are now selling it at only 50p (plus 50p postage), having taken over Dragon Data's stock of the game. A real bargain, that.

More letters next time, but now to Scott Adams and the thirteenth in his series of adventures, *The Sorcerer of Cleyemorgue Castle* at £7.99 from Adventure International. The Dragon version is text-only, and terse text at that. Scott doesn't go in for glowing descriptions, but he does go in for putting puzzles . . . and groin-inducing puns. You take the role of a certain Desernick, an apprentice sorcerer, and your task is to relieve 13 Siers of Power from the Castle, for reasons I've no room to go into here.

"I am in a field," is the first brief description, and you can see a most castle and raised drawbridge. No good adventurer should go anywhere without an **INVENTORY**, and this shows us to be holding six spells, of Fire, Seed, Light Squared, Yoho, Lycanthropy and the Wicked Queen's Spell. One of these will get you into the castle, with a terrible pun, and inside you'll find a courtyard containing a Magic Fountain. Casting water to the wind I kept into the fountain and lo! and behold, I saw A Star. Treasure number one, I thought, but soon after I was seeing stars, as whatever's in the fountain makes you feel a little odd. I'll get even, I decided, fighting puns with puns and casting my fire spell to freeze the fountain's contents. No dice, I'm afraid. No star, either.

Oh the courtyard is a bathroom containing a chandelier and the tail end of a piece of rope. All right, I'm a sucker for anything **UNITE ROPES**. Ken-ah! One descending chandelier and one deceased adventurer I bet the chandelier contains another star, too. Scott Adams strikes again, and herein another essential addition to the collection. Adventure International is converting Scott's other titles for the Dragon at the moment, which is marvellous news, but I can see the bottom of the page looming so I'll better stop. After all, we have to get the magazine together and send it all the way to the Orion Nebula, just outside Matherwell, don't we? ■

## ORACON 32 SEC MODEL 5 STAR 400-000 1000 C/E 235 ELECTRON 747 FLIGHT SIMULATOR

Superbly realistic instrumentation and  
play's view in flight simulator which  
includes emergencies such as engine  
failures and system failures. This pro-  
gram uses high resolution graphics to  
the full to produce the most realistic  
flight deck display yet seen on a home  
computer. There are 11 real time and  
24-hour indicators (see diagram). Your  
controls operate throttle, altitude, direc-  
tion, flap, slats, spoilers, landing  
gear, reverse thrust, brakes, etc. You  
can fly manually or use autopilot.  
Game systems and includes options to  
start with manual or random landing  
approach. "A real simulation, not just  
another game" (Your Computer, Apr  
19 82)

## DRAGON OWNERS!

Honeyfold have 480 Dr Watson Beginners BASIC for the  
Dragon left in stock. This is a complete course in learning  
to program in BASIC to let you use the full potential of the  
computer. To clear this stock we will send a copy of the first  
480 users to send £1.00 and their name and address to:

Honeyfold, Standfast House, Bath Place,  
Barnet, Herts EN5 1DD.

**AT HIGH  
(BASIC)**  
Machine gun  
warfare in the  
sky £5.95

**TIME ATTACK**  
The armed  
time machine  
£5.95

Send £10.00 only for both of these full 594 games:  
Telephone: 021-557 9098. Personal callers welcome

**TUDOR WILLIAMS**

10 Summerhill Road, Boston, West Midlands B7 1 1PD

If you've got a technical question write to Bruce Cadge. Please do not send a SASE as Bruce cannot guarantee to answer individual inquiries.

# Dragon Answers

## Arrays game

I AM trying to write a program that consists of three different formulas that can be written about 30 different ways. You will find a small subroutine that I have enclosed.

```
10 GOS
20 FORM=1TO3
30 READA(A)
40 NEXTA
50 DATA=SOR(A^2-B^2)
60 DATA=SOR
  (B^2-141)T80
70 DATA=99-B
80 FORM=1TO3
90 PRINTA(A)NEXTA
100 LIST
```

I am putting them in to an array and then calling them up when the program needs them. This way the program can grow. My problem is how can I get the program to work with a variable that has come from an array? The program is starting with working out trig problems with the smallest amount of information available. Is  $A^2-B^2$  -  $SOR$  (A-A-1-B-B) and A and B have been defined, then if you say  $X=A^2-B^2$ , all that happens is that either X becomes A(1) or a an error will be prompted. Am I asking too much of my machine?

J.P. Griffin  
1 Grand Rd  
Bristol, Cal  
Slough  
Berk

YOU ARE not asking too much of the Dragon, but to achieve the result you want, you need to use the DEF FN command. Rather than assigning a formula to a string, use the command: DEF FNA(X)=SOR(X^2-B^2)

When you want to get the result, use F-FA(X). You can also substitute a value for X in both the DEFINE stage and the F-FA stage. The function name can be any normal variable name (up to two characters long).

## A Basic problem

I HAVE two questions for you. When I type EXEC 38440 why does a "T" appear below it?

When I type EXEC 38440 why does it say below it (M 6663)?  
Duncan Chambers  
30 Park Avenue  
Southfields  
Fyne and Wear NE34 3QE

EXEC 38440 is part of the Basic's input routine, the part that prints the "T" character and accepts a line of characters into the buffer. It is of no use from Basic as an SM Error will be generated when you press Enter.

Exec 38440 is a routine which prints "M" or "where" it is the current line number — this is set to 6663 in direct mode. This subroutine is part of the error reporting routine.

It is generally not a good idea to call routines such as these from Basic, as you might end up losing your program.

## Lost for words

I HAVE some queries concerning the Dragon 64, and hope that you can help.

a) Why is it that when trying to use SPELLCHECK, I continually get an error message when the program checks the Supplementary dictionary?

b) How do I build a user's Supplementary dictionary?

c) I have configured STYLOGRAPH to suit my printer (a Memorex Tally MT80), but why does it occasionally come to a standstill and go off line when printing text? Printer cable is OK.

d) Are there any books covering the use of Dragon Disk Drives?

e) In the Dragon 64 Supple-

ment book (page 6), there is a Keyboard Auto-Repeat Facility. The pokes work, but when I use my disk drive, the disk won't stop revolving! Why?

Only pressing RESET or switching the computer off will stop it. Is there another way of getting this facility on the 64 in 32K mode?

G.J. Tuttle  
32 Red Castle  
Pleasant  
Staines  
SAS 6EH

TAKING your questions in order:

## Losing memory with Dragon DOS

I HAVE recently purchased a Dragon 64 with Dragon Disk Drive, but I am having difficulty in using the extra 32K memory with Dragon DOS. Typing EXEC merely sets up the standard operating system, not DOS. How can the extra memory be used with DOS?

David Forgan  
61 Rectory Road  
Parslopp  
Hares GU14 7NS

YOU CANNOT access the full 64K RAM and the cartridge area (where the DOS is stored) at the same time. Therefore, the 32K is not available in 64K mode. It is possible to write a machine

(A) The problem with the SUPP dictionary supplied with the Stylograph disk is that it is an empty file, and this is what is causing the error with the Spellchecker. To stop the error occurring you must have at least one entry in this file.

(B) The SUPP dictionary is a simple text file stored in the STY directory. You can use Stylograph to create one, there should be one word per line.

(C) I cannot see any reason for this — perhaps your printer is at fault.

(D) I do not know of any books that concentrate on the Dragon disk drives, although there is certainly a need for one, judging by the number of questions regarding these we get.

(E) The auto repeat pokes reset the interrupt routine to the Dragons' Basic ROM. The Disk ROM uses interrupts to control the motor off delay, and this is why the disk motor never stops. If you must use these pokes, you can type POKE \$HFFA0 to stop the disk drive at any time.

ORIG	=355	Disable IRQ's
LDX	=32768	Start of Basic
LOOP STA	\$FF08	ROM mode
LDA	,X	Get byte from ROM
STA	\$FF0F	RAM mode
STA	,X+	Store in RAM
CMPE	=87344	All copied?
BLO	LOOP	No branch again
ANDCC	=355-16	Enable IRQ's
RTS		Return to Basic in 64K mode

# The race is on to win the sprint

Gordon Lee sets the problem — Oasis software provide the prizes

LOOKING BACK over the last two years, I hope that readers will have found something to show that mathematics is not necessarily the dry subject that it is often thought to be, and indeed is a rich source of the unusual and the unexpected.

This type of maths — "recreational" mathematics — is by no means a new phenomenon. Its roots can be traced back over 4,000 years, and yet it is still a science that is bang up to date, with computers playing an important part in some of the recent developments. Nowhere is this more apparent than in the search for prime numbers of increasing magnitude. (Beginning in the time of the Greek mathematician Eratosthenes, of Cyrene (250 BC) who invented a simple means of listing the smaller prime numbers, numerous mathematicians have since devoted much time and labour to the quest for these enigmatic numbers. Nowadays the search is usually limited to the so-called "Mersenne" primes — that is numbers in the form  $2^p - 1$ . These numbers are named after the Frenchman, Father Marie Mersenne (see this page — Dragon User, November 1993) who in his

Copie of 1644 correctly stated that  $2^{2^{169}-1}$  was prime. How he arrived at this calculation, given the methods then available, is unknown. Curiously, he also stated — although at this time incorrectly — that  $2^{2^{17}-1}$  was also prime. It was not until 1847 that this was shown to be erroneous, since when, with the aid of high speed computers and sophisticated programs, the frontiers of primality have been pushed back even further. On this page in November 1993 the highest prime known was given as the 25,800 digit  $2^{6972593}-1$ . Since then this has now been superseded by the 36,751 digit  $2^{10467801}-1$ , which at the time of writing is now the highest known prime, although, I am sure, the discovery of a yet larger one is not far away.

Consider also Fermat's "last" theorem, so-called because it is the last of his theorems to be proved. This states that the expression  $x^n + y^n = z^n$  has no integral (whole number) solutions when  $n$  is greater than 2. When  $n$  is equal to 2, the equation is, of course, the basis of Pythagoras' theorem with an infinite number of integral solutions. But by its last two cubes that sum to a third cube and the last

seems impossible. Computers have checked all integral combinations of cubes up to several millions without a single solution being found. Of course, this does not prove that there is not an as yet untried combination, and so it is necessary to look for an algebraic proof that the problem is impossible. Curiously, there is no such proof available which either proves or disproves Fermat's theorem, and in the three hundred years since Fermat's death mathematicians have sought in vain for this elusive proof.

### Fermat's last word

Perhaps the last word should go to Fermat himself. After his death in 1665, in the margin of one of his books was found a scrawled note: "It is impossible to separate a cube into two cubes, ... or any power except a square into two powers with the same exponent. I have discovered a truly marvellous proof of this, which however, the margin is not large enough to contain".

Could it be that he had indeed found the proof that has since stunted mathematicians for over three centuries? Could it be that this great mathematical mind could have been mistaken? Surely not. Or could it be that, realising the impossibility of such a proof, Fermat pulled what must be the greatest mathematical joke of all time. Perhaps somewhere the ghost of this great man is still having a quiet chuckle at our expense!

And now to this month's competition. Consider, if you will, a number system based not on the usual decimal system but on a base of 26. Thus, the digits could be represented by our normal alphabet: A=1, B=2 and so on up to Y=25. The letter Z would represent zero.

As a consequence of this any word in the English language (or for that matter any random sequence of letters) would have a numeric equivalent. So, for example, the word "COMPASSION" would have a decimal equivalent of 55773764. Now if such a system were in regular use it is quite conceivable that a table of squares would be printed just as there are such tables available in the decimal system.

If I had such a table covering the squares from A to NUT, how many of the squares would look recognisable? English words? ■

## Prize

THIS MONTH, Oasis Software has donated 15 copies of Sprint Basic Computer for the Dragon as competition prizes. Sprint enables you to convert your Basic programs into intermediate code with ease, speeding up run time by up to five times normal.

## Rules

TO WIN a copy of Oasis' Sprint Basic Computer, you must both show the answer to the competition and how to solve it with the use of a Basic program developed on your Dragon. Please do not send in a cassette containing the answer.

As a forerunner, complete the following sentence in 12 words or less: "I would really like to win a Sprint because ..."

Your entry must arrive at Dragon User by the last working day in May. The winners and the solution to the problem will be published in our

August issue. Entries will not be acknowledged and we cannot enter into correspondence on the result.

## February winner

THE ANSWER to February's competition is 4 red blocks, 4896 blue blocks and 14700 green.

Twenty students were pen-pal-close enough to win themselves copies of Channel 4's *Misconceptions* adventure for the Dragon. They are A Thomas of Bury St Edmunds, M Shindred of Kingsleywell, T Verheide of Knutsford, O Kringstad of Norway, Rachel Edmunds of Bedgefield, Ned Seaton of Thornbury, M Chakras of Denmark, Mark Hoopes of Washingtonburg, Paul Denavit of Mersley, T Potter of Chislehurst, Z Chen of Wexham, L Turner of Epsom, Graham French of Northampton, T Fleck of Roydon, P Scott of Malton, Keith Watson of Clacton, P Wilkes of Stone, Kevin Desmedt of Cork, P Fairclough of Kilmours and R Morris of Rogestons.

# RETURN OF THE RING

THE RING  
OF  
DARKNESS  
PART II

At last the saga  
continues...

The Guardian of Shadr is defeated, the Hell spawned hordes of the Evil Sage lie at bay. Now Ringbearer, wielder of the Four Bright Rings, must face the greatest challenge: to return the Ring Of Darkness to its masters on the hidden planet Ringworld... And somewhere at the ends of time the forces of evil are preparing their revenge.

After one year of development, Wintersoft are proud to present the most sophisticated game ever created for the Dragon 32. Written 100% in machine code, RETURN OF THE RING is an astounding multi program blend of superb high resolution colour graphics and advanced routines that allow you to communicate with your computer in complete sentences. You will face challenge and excitement as you and your Ringworld companions travel a mysterious planet and brave the dangers of an amazing three-dimensional forest moon. An epic adventure unrivalled for its wealth of detail and diversity.

May luck travel your path.

Please note RETURN OF THE RING is a complete adventure. You need not buy THE RING OF DARKNESS to play it.

# INCENTIVE

FOLLOWING THE EXEMPLARY BACKTRACK - INCENTIVE NOW PRESENTS FOR THE DRAGON

# THE KET TRILOGY

BY JOHN MARTIN AND RICHARD McCORMACK

## \* THE KET TRILOGY - THE CELEBRATED ADVENTURE CLASSIC \*

### THE STORY SO FAR...

The Lords of Ket rule a strife-torn land where magic and mayhem are common place. Raiders from the east sweep in and devastate the countryside, spurred by the villainous Priest-King Vran, a twisted, jack-in-a-box of the cult of mad monks and by the beautiful, though utterly evil, Priestess Delphis.

Unjustly condemned for a murder you did not commit, you have been offered the chance of escaping the hangman's noose by undertaking a perilous quest. Naturally you accept, but to ensure your loyalty to the cause, the Lords have placed a magic assassin upon your neck, ordered to sink his poisonous fangs into you at the slightest sign of cowardice.

Placed at the brink of the unknown village, you stand alone with the daunting mission before you... With just a handful of coins, your trusty sword and the will to succeed...

Your task is to travel beyond the mountains and then underground via Vran's Temple to the ultimate confrontation with Vran himself, penetrating his inner sanctum, beyond the Guardians of the Gates...

**THE THREE 30K ADVENTURES  
TOGETHER FORMING THE  
CLASSIC AND COLossal  
KET TRILOGY**

**MOUNTAINS OF KET  
TEMPLE OF VRAN  
THE FINAL MISSION**

**THE KET TRILOGY** Series of adventures are available from selected Software Dealers nationwide. If you do not locally please use our fast and efficient mail order service.

**PLEASE NOTE:** Each part of the trilogy comprises 1 floppy disk and 1 manual which can be purchased independently of the other two.

**RECOMMENDED SUGGESTED** full cover volume, featuring 30K 40K

**TRADE AND CREDIT CARD ORDERS:** telephone direct 02734 109633.
