How to submit articles

The quality of the material we can publish in
Dragon User each month will, to a very great
extent, depend on the quality of the
stories that you can make with your
Dragon. The Dragon computer was launched
on to the market with a powerful version of
Basic, but with very poor documentation.

Articles which are submitted to Dragon
User for publication should not be more than
3000 words long. All submissions should be
typed. Please leave wide margins and a
double space between each line. Programs
should, wherever possible, be computer
printed on plain white paper and be accom-
panied by a tape of the program.

We cannot guarantee to return every
submitted article or program, so please keep
a copy. If you want to have your program
returned you must include a stamped,
addressed envelope.

Editorial

The New Year has always been a time for looking back on the past 12
months and attempting to sum things up — so now seems a reasonable
time to sit down and think about where you and your Dragon are going.

Why did you buy your computer in the first place? As an educational
tool? To play games? To mess around with code? Or maybe you just
wanted to find out a bit about the new technology? Whatever the reason,
well over a year after the Dragon was written off in many circles (and since
then lesser computers have arrived on the scene and then vanished just as
quickly — take the C16 for example), your choice of computer remains a
valid one.

Education — you've only got to take a look at what the Spanish are doing
to see the potential. Games — the market may not be so prolific, but the
quality is there. Technical — powerful expansions and utilities abound.
Curious — the Dragon's excellent Basic and the wide range of add-ons
currently available should keep you occupied. So what's keeping you from
using your computer? At the 8809 show, one exhibitor told me he was
optimistic but, "there are a lot of Dragons out there, stuck in the left." He
could be right ... but what on earth are they doing there!

It is a fact that in many ways there has been no better time to own a
Dragon. So if you're reading this in the newspapers and haven't touched a
computer for months, take a closer look inside our pages, get the computer
down from the attic and treat yourself to a session on the keyboard this
evening. And make 1986 the Year of your Dragon.

News desk

If you have any new products for the Dragon — software or hardware — ring the News Desk on 01-437 4363.

The Dragon's Arm!

Lucidate have been keeping themselves busy. After launching their Dragon's Claw digital interface and Snap-Dragon vision system, the Cambridge based company are now offering a range of low-cost peripherals for experimental Robotics. These are based on the highly successful Beasty Arm from Micro Robotics which has been available for the BBC micro and Spectrum for some time. All the control software necessary to drive the eight-channel Beasty servo controller through the Dragon's Claw is provided on cassette. The servo controller plugs into the

Claw and can be used at the same time as the Snap camera, thus creating the possibility of providing vision guided control of the arm. The controller can handle up to eight standard model servos.

The actual Robot Arm is supplied in kit form and comprises a solid metal base and a collection of tubular aluminium rods and special plastic joint units. It is powered by standard radio control type model servos.

Lucidate is offering two Robotics packages, a starter pack with Beasty controller and two servos at £75 plus VAT and a complete three-servo

Robot Arm kit including Beasty controller and three servos at £100 plus VAT. Both are available by Mail Order only from Lucidate Ltd, PO Box 108, Cambridge CB1 1DQ. Tel 0223-355844. Vex and Access cards accepted.

At the same time, Lucidate are announcing a new implementation of their established Pascal System, version 3.5/P, running under Fax for the Dragon/Tandy.

Lucidate describe the key design objective of their Pascal as user-friendliness, with extensive error checking at the compiling stage and the run-time stage, with all errors being

The Beasty Arm

reported in English. They also claim it conforms 'very well' to the ISO standard.

It is planned to be marketed through Compuserve, costing £75 plus VAT.

Road Show

Microdeal's recent ambitious Dragon Roadshow, covering Manchester, Newcastle, Leeds, Birmingham and Cardiff all within eight days seems to have gone down well with the general public and established users alike.

"The Roadshow was a great success", says Microdeal Marketing Manager Alan Hobbs, with a good level of support at almost every venue. A spare part-out at the Watkiss Hotel, Leeds was attri-

buted to lack of pre-publicity.

Many new Dragons were sold — with the 32 selling for £60 (including £30 worth of software) and the 64 selling for £79.99 (including £30 of software), and Microdeal's new titles such as Trekboar and Shocktrooper proved to be popular.

Plans are already afoot for a follow-up 'Roadshow' in the Spring. Microdeal can be contacted at 41, Tress Road, St Austell, Cornwall PL9 5SE.

Incentive convert Moon Cresta

Those old-fashioned Incentive Software are set to bring out a version of that arcade classic Moon Cresta for the Dragon. This 'vintage shoot-'em-up', brought out by Nichibutsu in 1982 was a legend in its own time in arcade circles.

Successfully released on Spectrum and Commodore some months back, the Dragon version is being written by John Martin (author of the Fat Trilogy), and Incentive Creator Ian Andrew expects it to be-

come available towards the end of February. Available by mail order only from Incentive priced £7.99 — 54 London Street, Reading RG1 4SQ. Tel (0734) 581676.

Stop Press!

The Third 6809 show attracted an estimated 7,000 users ... full show report in next issue.

Week-end away

The shortbreak holiday for Dragon enthusiasts which took place in mid Wales over the last weekend of October proved to be an unqualified success for all participants, some of whom were not even Dragon owners! They had travelled from various parts of England and even Scotland to Llanfyllin in Powys for the first of Dragonfest.

First of all, and judging by the response a second similar gathering will be taking place in the early Spring of 1986. Right from the start participants enjoyed their common interest — 6809 computing, ideas and methods were exchanged over dinner and late into the early hours of the morning.

After very little sleep the group reassembled to hear Mr Ted Cynoch, managing director of Compuserve, give an informal talk on the current situation of Dragon and

its development.

After a brief pause Mr Rod Lloyd, Technical Director of Pulse Electronics took over and explained their company's link with Dragon which dates back to the days when they built not only the Dragon but also the Beas.

The afternoon lived up to expectations with plenty to keep our interest including a brief talk given by Mr Alan Cynochal, Ted's brother and Technical Director of Compuserve. He outlined the use of Compuserve software, modems, bulletin boards and electronic mail/news facilities.

An evening evening was spent socialising — an early night was had by all — 1.30 am!

Then next day a planned visit was cancelled — once again the group's gathering around the eight Dragons to favour every last minute of the weekend. Until the next time.

Bob Lloyd

There will be a next time, and we would happily welcome Tandy and other 6809 devices — and friends. For further details contact: Bob Morgan, Marketing Information Officer, tele-studies Tourists Council, Caroline Owen Glyndwr, Machynlleth, Powys.

Letters

This is the chance to air your views — send your tips, compliments and complaints to Letters Page, Dragon User, 12-13 Little Newport Street, London WC2D 2PP.

Money Matters

WITH REFERENCE to Craig Henderson's letter (Dragon User, November), I disagree with his opinion that Peter Whitaker should not charge £3 for a cassette of Wordpro, also published in Dragon User.

Has Mr Henderson considered the cost of producing cassette programs for readers of a magazine as popular as Dragon User?

As Mr Henderson informs us, cassettes do indeed cost 50p, but caddies themselves cost another 50p each, and a 24p stamp is also necessary. That brings the total cost for each order received to at least £1.24.

Additionally, there is the inconvenience for the author, who must buy the materials, save the program several times to ensure a good quality copy, not to mention the time and effort involved in writing the program and editing in the first place. For a program as comprehensive as Wordpro, this must have taken quite a while!

If Mr Henderson prefers to type in programs from listings rather than pay £3 for the privilege of having a cassette sent to him, the choice is entirely his.

Objections will be justified if the price being asked was considerably higher, but I for one feel £3 is a small price to pay for typing in 3,000 bytes of hexadecimal numbers.

This is especially true when one considers that similar word processor programs cost rather more than £3, or even £10.

Stephen Williams
Purthorpe
South Wales

NDUG

WITH REFERENCE to the letter from Martin Verman (Letters Page October 1985), I can't help wondering if Martin has ever bothered to take sufficient time off from all that programming, etc, to attend one of the 6009 Shows or even to read Dragon User? ... if he has, it seems strange that he doesn't

know that the National Dragon Users Group has been around since August 1984, and has a very healthy membership list!

Most of his queries have been covered in various issues of the group newsletter "Up-dater", and it's possible that he could have saved himself a lot of work by joining us!

For the benefit of all other Dragon users who may not have noticed us, all you have to do is send a note to Paul Grate, National Dragon Users Group, 6 Navarino Road, Worthing, Sussex, and we'll send you full details. Membership costs £7.50 per year (£9 outside the UK), and this gets you a monthly newsletter, help with hardware and software problems, advice and help with repairs, and quite a few special offers from various companies.

Paul Grate

Worthing
Sussex

Dragon Plus

I HAVE received many letters on enhancements for the Dragon, most of the letters concerned the poor text display on the Dragon, which seems to be the major problem with Dragons both in domestic and other uses. Other people were concerned about the Dragon 32 and its future role.

Our new Dragon plus interface was designed for both 32K and 64K owners and gives the better display quality as all font was needed. It also allows 32K owners to join the "FLUX net" if they want to, or to add much needed memory to their computers. In addition our new expansion can save the cost of an additional disk unit for disk owners as the extra memory is configured as a very fast RAM Disk when FLUX is used. It also works on DOS drives for release soon.

Our approach is to use existing, cheap, technology to give as many features as possible, the opportunity of expanding their computers at a reasonable cost, to give Dragon Plus. Companies does not own Dragon — some people tend to forget that!

May I thank all the readers who wrote to me, I have not

had time to reply to each person but I have read all their comments with great interest.

Baudwalk

THANK YOU for mentioning my bulletin board in your November issue. There are some things that weren't mentioned that would be useful.

a. The board runs at 300 baud using COM1 tones.

b. Settings needed to access are 7 data bits, even parity and one stop bit.

c. You don't need to have COM2 to access the board — any communications software capable of the above will work.

Finally, another plug for the system: times are Wednesday and Saturday 1800 to 2200 and Sunday 1000 to 2200. The number is 0705 736025.

WINTERSOFT PRESENT THEIR FIRST ADVENTURE WITH PANORAMIC GRAPHICS

THE BARONS OF CETI V are the eight fabulously wealthy owners of the distant planet Ceti V. Between them they control the Galaxy's richest source of cattle ore, the fuel for hyperspace ships.

THE JUXTAPOSITION is the meeting point of two totally different universes, a semi-mythical line of dimensional instability thought to pass through Ceti V.

AS SERVITOR CROSS, Baron White's head troublemaker, you face a daunting mission. Far to Ceti's north, beyond the blue mountains, the unscrupulous Baroness Black is meddling with the JUXTAPOSITION's awesome power. Alone, you must travel the airless wastes of Ceti V, to discover the purpose of her secret experiments.

JUXTAPOSITION is the first in an epic new series of adventures from WINTERSOFT, creators of the widely acclaimed RING OF DARKNESS. Written 100% in machine code it features over 600 internal locations, a 4000 location planet, complete sentence input, and, with our spectacular PANORAMIC GRAPHICS system, nearly 32000 colour 3D views of the planet's surface.

Available on cassette for Dragon 32/64 price £6.95

May luck travel your path.

HOW TO ORDER

Don't despair if you are unable to buy our games locally. Our express mail order service will despatch your order within 24 hours of receipt. Fill in the order form on this page (or write us a letter), enclose a cheque or postal order made payable to WINTERSOFT, and post it

Communication

Send in your questions, requests, and plans to **Communication**, Dragon User, 12-13 Little Newport Street, London WC2

Communication, as defined by the *Extremely Small Pocket Oxford Dictionary*, is the 'imparting or exchange of information'... and this is what 'Communication' in Dragon User will be all about too. As commercial technical and software support for our computer users, we get ever increasing amounts of mail on a variety of subjects, all asking for help and information — more than our Supreme Brian Gadge could ever handle. So this is your chance to reach many thousands of Dragon users who might be able to help you — and, of course, if you can help someone — why not drop them a line? Here are the first few problems to kick off — we'll be hoping to pack more in next month. Over to you...

Repairs

I HAVE been a Dragon User for two years (Dragon 32). I have now encountered a problem. After perfect service it has now developed a fault. I returned it to Diacs from where it was purchased — it was then returned to me unrepaid, stating that there was no place that now repairs or stocks Dragons. I write to you in the hope that

you could advise me of a repair shop or such in the North-West or in fact anywhere.

Dragon Plus

The ultimate expansion for the Dragon? Ray Cotes checks it out.

COMPUSERSE PROUDLY advertise their 'Dragon Plus' board as being the 'Ultimate Expansion For Your Dragon'. This is a very bold statement indeed and so it was with great interest that I peered it from its wrappings. (Compuserse are very, very generous with their sticky tape!)

The expansion unit consists of a single, very professional looking circuit board about six inches square with a short ribbon cable connected to it. The board has been designed to 'piggy-back' onto the Dragon's main circuit board, which is nice because the whole thing fits inside the Dragon's case and so leaves the cartridge connector completely free. Instructions for installing the board may appear a little sparse at first, consisting of only a single sheet of paper, but all the necessary information is present and includes diagrams and photographs of the hardware. Provided that a little care is exercised, the job is quite simple and should create no problems even for the most inexperienced user.

The principal components on the board include 64K of dynamic RAM, a 6845 Video Display Generator (VDG) as used in the BBC micro, an 8K Eprom containing the character set for the VDG, a 2K RAM chip which is used to store the information displayed by the VDG, and after installation, your SAM chip and one of the Dragon's BASIC EPROMS.

There are three steps to installing the board, the first is to bypass a resistor on the Dragon's main PCB, the second is to fit the board itself, and the final step is wiring up the extra monitor socket. Obviously the first thing to do is remove the Dragon's top cover and keyboard assembly to gain access to the main PCB. Once everything is out of the way then the work can begin.

The bypassing of the resistor involves simply soldering a short jumper wire across the legs of the component. This resistor forms part of one of the oscillator circuits within the Dragon and unless the jumper wire is fitted, a screen flicker may become apparent when using the 80 column display.

Installation

The fitting of the board itself is very easy. Firstly the SAM chip must be very carefully removed from its socket and inserted into a new socket provided on the expansion board. This is the part where the care must be exercised as the SAM chip is VERY sensitive to handling and VERY expensive to replace. The first of the two BASIC Eproms must also be removed from the main PCB and inserted into a socket on the expansion board which now neatly slots

into the empty socket on the main PCB which was originally occupied by the SAM chip. Now the ribbon cable connects to the socket on the main PCB in place of the BASIC Eprom which was removed earlier. It is recommended that a little adhesive is used to secure the board in place and care must be taken to ensure that the underside of the board does not come into contact with any of the components on the main PCB. This is not a problem as it is only a case of bending the gold vapour so that it lies flat on the board.

Finally the extra monitor socket. A monitor is essential on any machine that uses an eighty-column display as an ordinary television set will not display that amount of information clearly enough to be of much use. The obvious choice is to fit a DIN socket to match the monitor socket fitted as standard on the dragon; this will enable existing cables to be used. Wiring the socket up is very easy provided you have access to a soldering iron. Two wires must be taken from the top left hand corner of the expansion board (which is clearly marked) — these are the composite video signal and all other wires. A third wire is taken from the back of the existing monitor socket to provide the sound output (Fig One).

Features

So, installing the board is quite easy, but what does it offer? There is the 64K of RAM on the board which may be accessed as two banks of 32K by means of the RAM paging capabilities of the SAM chip. There is a 6845 Video Display Generator (VDG) which is the same as used in the BBC micro and which will give an 80 column by 24 line display. There is a 2K RAM chip on board which is used by the VDG so that none of the Dragon's RAM is used for display purposes, but the real power of the expansion board is demonstrated when the custom version of Compuserse FLEX is loaded. FLEX on a standard Dragon is very powerful but in conjunction with this board several new features become apparent. The new FLEX uses the extra 64K of RAM as a silicon, or 'virtual' disk, equivalent in size to 240 floppy disk sectors. This as you can imagine is very quick when compared to an ordinary floppy disk unit as access to data will be very much faster. The only problem is that with the virtual disk being volatile RAM, as soon as the Dragon is

FIGURE 1

switched 'off' all data held on the virtual disk will be lost. This problem has, to a certain extent, been alleviated by Compuserve's recommended use of the virtual disk. The example start-up file given on the system disk delivers the virtual disk as being the main system disk and then copies the most often used files such as the CMT and LIST utilities from floppy disk to the virtual disk. This means that those commands are executed almost immediately as there is no disk access required to load the command into the utility command space before that command may be executed. An example is the TSC editor which takes 6 seconds to load from floppy disk but only 3 seconds to load from the virtual disk. Although this is only a saving of 3 seconds, a program which requires a lot of disk access (such as the assembler program) took one minute two seconds to assemble a short file using the original floppy-based system but only 14 seconds using the virtual disk system. This is a saving of 48 seconds. On a larger file the savings will obviously be even greater.

The FLEX system disk supplied is booted under Dragon (DOS) using the familiar BOOT command. A minor hiccup here is that because the monitor needs to be connected to the new 80 column monitor socket, the BOOT command has to be

either typed 'blindly' or the monitor plugged into the standard Dragon monitor socket.

The new version of FLEX allows you to ask a logical number to each device on the system. For example the virtual disk may be assigned as device zero and the floppy disks on a multi-drive system may be assigned the numbers one and two. Once the devices have been assigned a number, they may then be assigned a function such as whether they are system or working devices. By assigning the system to be 'all drives' then the virtual disk will be switched first followed by the first of the floppy disk units. This means that the most often called files which have been moved to the virtual disk will be called very quickly whilst the lesser used files will also be loaded from floppy without the user having to specify a drive number.

The virtual disk may be treated in just the same way as an ordinary disk unit using the same standard commands such as CMT and LIST, but an extra command called VINIT has been added to the system disk which will effectively 'format' the virtual disk in the same way as an ordinary disk would be.

The FLEX system disk comes with a customised version of DBASIC which has been updated to work with the 80 column

display so that BASIC users will benefit from the Dragon-Plus as well as the dedicated Flex-Fanatic. Most of the commercial software available for FLEX (and COS) was originally written to be used with an eighty column display so there is no shortage of software available. Some of the packages currently available for the 80 column display, including SP-EDIT and the FMS database system, were tried with the Dragon-plus system and found to work perfectly.

Conclusion

In conclusion, the board is manufactured to a very high standard using high quality components. There were no problems encountered fitting the board to the Dragon. The custom FLEX system worked admirably, and the whole package worked first go. The 80 column display is very, very fast and exceptionally clear. The control codes which set up the various screen features on the 80 column hi-res display such as windowing, etc, have all been adjusted to work with this new display. The Virtual disk certainly gives the impression that you are using a 'real' system and offers a lot more flexibility than would normally be available. For the single floppy drive owner wishing to move to a twin drive system it may be worth considering a Dragon-Plus instead of buying a second floppy drive. As well as getting the much needed 80 column display, the expansion is cheaper, faster, and quieter than a floppy drive and when the time comes to expand to an even bigger system the Dragon-Plus board already has the connector ready to interface to Compuserve hard disk controller which should be available in time for the November 1989 show.

Compuserve are currently perfecting a ROM based version of FLEX which will replace one of the BASIC roms so that the Dragon will 'power up' as a Flex system which will support printer spooling (the ability to list files to a printer whilst running other software) and should BASIC be required then DBASIC will still function as normal. Unlike many expansions or other add-ons, you do not lose any software compatibility with the Dragon-Plus system. It is still possible to use the Dragon as a no-expansion board was fitted.

As for the claim that this is the ultimate expansion for the Dragon, well, at the present time there is nothing that compares with it. Add to this Compuserve's future plans and their claim may be a genuine one.

Hardware — Dragon Plus Expansion

Price — £183.95 (plus £1.00 p&p)

Micro — Dragon 32 & 64

Supplier — Compuserve Ltd

TREKBOER

A GRAPHIC
ADVENTURE INTO
DEEP SPACE

This exciting hi-res adventure begins aboard the starship "Trekboer". It is the 23rd century and the earth is threatened by a deadly virus. Your mission is to search the frontiers of space and return with a cure to save mankind from disaster. But how? Where? The name of your ship provides the first clue.

Actual screen shots from Dragon 32 version

Available for
Dragon 32/64 cassette £8.
Tandy colour 32K cassette £8.
IBM PC & most compatibles £19.95
Requires 128K & colour graphics.

SPECIAL OFFER!!!

Dragon User, in conjunction with Melbourne House, bring you an amazing special offer to brighten up those long winter evenings ... or two offers to be precise.

Tape Offer

We're offering these two Melbourne House classics *Hungry Horace* and *Horace goes Skiing* at a giveaway price of £3.50 (including P&P) for both titles! That's £7.00 each ... compare that with the total retail price of £11.50!

Book Offer

Buy either the 'Dragon 32 programmer's reference guide' or 'Dragon machine language for the absolute beginner' at our special price of £4.95 (a saving of £2.00 on the retail price) and get 'Enter the Dragon', a collection of programs for the Dragon 32, free!

Fill in the form opposite — together with a cheque or postal order for the correct amount, made payable to 'Melbourne House Publishers Ltd' and send it to us at Special Offer, Dragon User, 12-13 Little Newport Street, London WC2H 7PP. Offer closes January 31.

Advanced Basic

Work and play combined on the Dragon by Gareth Fenton

THE DRAGON has a very powerful Basic but poor documentation, and there are a number of useful routines and commands not covered anywhere. This article demonstrates, with an example game program, some lesser known techniques available to all, whether or not they possess an assembler. The only machine code in this program are ROM routines that can be called from Basic with "EXEC", and the short auto-run routine that works with any Basic program.

The object of the game is to keep your three cities as cities (instead of rubble) for as long as you can. Trying very hard to stop you are the alien bombs that fall vertically from the top to the bottom of the screen, always ending up on a city — unless you destroy them en route.

This is achieved by moving your ship up and down on the left of the screen to lie in line with the bombs and pressing the fire button. Easy! By the way, just to ensure that you don't delay, the alien attack ship is constantly manoeuvring for a clear shot at you. If you remain stationary for too long, it will fire. Like the bombs, it never misses. The time delay before it fires, and the time taken for the bombs to fall, decreases at each level. Only certain parts of the bomb (the white parts) mean a hit, so good shooting is needed.

Pause and Return features are written into the game. Simply press either P or R at any time. To restart after Pausing, press any key. Level 5 on the game is a "suicide level" — to see what I mean, select it and try. You will not last long.

The auto-run routine starts at line 3000. Instructions for it are included in that part of the listing. I suggest that you type in GOTO 3000 as a direct command before running to save the program so that it will auto-run. NOTE. Type CLOADM to test the program once saved in this way.

I will now explain how the program works.

Welcome to the world of structured programming! This means that each section of the program has been made into a mini-program or subroutine, each one being called with GOSUB and terminating with a RETURN command. The GOSUBs and the start of each subroutine are labelled with REM statements so that you can easily follow what is going on. Writing your own programs like this is not very hard once you get used to it, and they are much easier to debug than "spaghetti" programs, i.e. with GOTOs everywhere! They can also be quicker to run. There are a lot of REMs (!) in the program — these

can be left out if you wish.

Lines 10-180. This is the main control routine — it calls each subroutine. Many of you will be puzzled by lines 120-140 and 170. The variables YOUHIT, THROBBLIT and FINISHED are set to -1 inside a subroutine and the DRAGON reads these lines as:
IF YOUHIT=-1 THEN ...

This is because -1 is the code for "true". This is hard to explain so try it yourself with the following:
LET A=5:PRINT A+5
-1 is the answer.
PRINT A+3 returns 8 indicating FALSE.

I have used this method to pass TRUE and FALSE messages between routines as it is easier to follow, looks better and is slightly faster. If NOT FINISHED in line 170 explains itself.

The same sort of thing is used in the double speed check in line 2040 where DS is either 68 for "Y" to the question in line 1180 or 78 for "N". Try this in your own programs.

Now for the subroutines.

Lines 1000-1140 contain, as I am sure 99 per cent of you know, the text screen codes. These are from 1024 to 1038 but the character codes are different from their ASCII equivalents. Also some non-ASCII characters are available — such as inverse numbers and space, etc.

Lines 1200-1440 and lines 1470-1630 are both routines for creating User Defined Characters. Doubtless most of you have had to listen to owners of lesser machines such as the Commodore boast of the few sprites available on it. Well, now you can create your own, and, with a little care, animate and control them just as well with GET and PUT plus one of the five options available (AND, NOT, etc). To create your own UDChs use 0 for a black pixel and 1 for a white, make FOR A=1 TO the number of rows, alter the DIMING, GETTING and PUTTING and run the subroutine.

Line 1800 contains EXEC 34891. This calls a ROM routine that waits until a key is pressed before continuing. Machine code users might like to note that the key pressed is held in the A register. JSR 34891 ORRA #keycode (\$E0 ...) can be used to check for a certain key.

Lines 2100-3150 read the joystick and PUT your finger. This is done with EXEC AHBC62 which stores the joystick values in locations 348-348. Reading them this way is quicker than using the JOYSTK command. The fire button is checked for using (PEEK (\$5280) AND 1) as each

joystick has two values for the fire button. Using this saves the need for IF PEEK (\$5280) = 128 OR PEEK (\$5280) = 254 THEN ...

This method is shorter, quicker, and allows keyboard control to be more easily augmented by replacing the memory locations used with those given later in the program.

Lines 2280 and 2040-2090 make an effective explosion by drawing concentric circles, gradually getting bigger, first in the foreground colour and then in the background colour to blank it out again. The Dragon's circles miss out some pixels when drawn like this and these pixels make the "debris" left after the explosion.

Lines 2440-2480 are the PALSG and RETURN features. This routine may be typed into your own programs to add this feature, normally found on professionally written games. The routine must be called once a loss in a program.

Line 2810 caters for answers such as Y, YES, YEAH, etc in answer to a program.

To use the keyboard for control, follow the directions given in lines 2830-2700.

For those who write machine code programs I include, to round it all off, a listing of a basic program that will auto-exec one written in machine code. It has the advantage of being short and easy to use. Also it will exec the program if the RESET button is pressed.

To Auto-EXEC Machine Code programs, use

```
10 CLOADM "your program"  
20 POKE $HFB,PEEK(157)  
30 POKE $HBC,PEEK(158)  
40 POKE $HBA,$H7E  
48 "DESIGN TEXT LOADING SCREEN"  
50 OSKHEM "your program", $H16A,  
60 PEEK(120)+254+PEEK(127)-1,0  
68 POKE $HBA,$H8B:POKE $HBB,$H8B,  
$H8B:POKE $HBC,$H8B
```

If you do not wish to CLOADM your program, and line 10 and replace the PEEK (120)+254+PEEK(127)-1 in line 50 with the last address in your program.

To reload your program type CLOADM and press the enter key. The loading screen that you defined in line 40 will be displayed during loading. Loading takes about two minutes longer than usual but will auto-EXEC on loading and if RESET is pressed. Note that this method only works with machine code programs.

For those who do not feel like typing in the game, a cassette is available for £3.95 (cheque or P.O.) from Gareth Fenton, 208 South Lodge Drive, Southgate, London N14 4BA.

SUPPORT YOUR DRAGON DEALER

Microdeal have been supplying software and accessories for 5 years and when you place an order you can be confident that it will be supplied. Why take a chance with other mail order companies when you can rest assured when placing your order with Microdeal.

ALL THE TOP SELLERS AVAILABLE FROM **MICROPOST**

TREKBOER

From Microdeal

5 star rated graphic adventure. The latest release from Microdeal

£8 (P & P 75p per order) **Total Price £8.75**

EDDIE STEADY GO

from Incentive

5 star rated 22 screen arcade game

£5.00 (P & P 75p per order) **Total Price £5.75**

The Joyful Dragon

The mysteries of joystick operation explained by Pam D'Arcy

A JOYSTICK provides two values for a Dragon programmer to use in whatever manner he or she chooses. There is a value relating to a horizontal, or X axis and one relating to a vertical, or Y axis. Both values are in the range 0-63. If like me you have an old Dragon manual, ignore the JOYSTICK information and digest the following.

The joystick values are placed by the BASIC interpreter in four of its workspace locations. Use of the JOYSTICK function copies the appropriate value from BASIC workspace into your variable, see Table One.

There is a routine in ROM (at address \$B012) that updates these locations. It is only entered from a BASIC program when JOYSTICK (or EXEC JOYSTICK) is used. This applies even if you are only using the left joystick, or you are only interested in vertical axes. It is rather like the keyboard and its roll-over allowance — if the joystick readings were updated on every JOYSTICK command (or even more frequently), the action may never be frozen for long enough to determine the meaning of the joystick movement to your program.

TYPES OF JOYSTICK

ANALOGUE OR ROLLER-BALL OR TRACKER-BALL are the ones able to give you, theoretically, all possible values, 0-63, in both directions. I say theoretically

because, says my more scientific husband, the guts of a joystick are potentiometers and they may vary slightly even between joysticks produced by one manufacturer, perhaps not being able to send the full range of signals to the Dragon. Basically, wherever you have your joystick physically pointed to, the JOYSTICK (X) command will update the locations for both joystick ports (although the values will be meaningless where no joystick is plugged in). Some schematists may include the words 'Linear Potentiometer'. This is the basis on which one would expect analogue joysticks to work — that movement of the joystick in a line gives regular movements/decrements in the values, as the stick progresses along that axis. One would expect the following readings (Table Two) from an analogue or ball-type joystick (the latter type having a large sort of ball-bearing in a socket that you roll around with the palm of your hand). **SWITCHED JOYSTICKS** determine readings by a number of 'switches' contained within them, activated by moving a stick. The number of obtainable values is determined by the number of switches alone, often eight plus centre.

As an aside, how about a 16 position box of buttons connected through the joystick port that, with a small handler program, we could use as a hex pad for fast and simple input of hex data?

SELF-CENTERING JOYSTICKS have no effect on readings apart from giving the user a guaranteed (one hopes!) return to the centre point (0,0) on releasing the stick, as it springs back to its 'home' position.

USING JOYSTICKS IN PROGRAMS

The use that you put the readings to is entirely a matter for you. I recall that in a previous Dragon User article someone suggested that, unfortunately, a lot of the sensitivity of joysticks is programmed out of them. Using hobby-built analogue, so-called centring joysticks, I find that the required control can be too sensitive, particularly where a return to centre is demanded before allowing a change of direction in screen-portrayed movement. This can be tricky to achieve, particularly by the young ones in so-called 'educational' programs — mine often give up in disgust because they cannot understand the mechanics as they move the stick in the right direction — but the program doesn't respond. I feel that less sensitivity about the centre point could be a distinctive plus in such software! I hope you now realise why sometimes advertisements for switched joysticks state that they 'work with most games' — if a game is dependent upon a value set of values that cannot be returned...

JOYSTICK DEMONSTRATION PROGRAM

I knocked up this program really as a quick demonstration of using joysticks in machine code. However, it has proved to be an invaluable quality tester of our joysticks — revealing a weakness along those particular axes that we hadn't previously realised, which is why I suddenly realised that it could be invaluable to you to take it with you to check out potential joystick purchases! The kids have played with it for hours (mainly trying to paint the entire screen blue — quite a feat in joystick control — good job the joysticks are as tough as the kids!).

What it does is to relate each reading that it gets back for the right-hand joystick to the graphics screen. As discussed above, analogue joystick readings are 0-63 in both directions.

The screen is 256 pixel columns, horizontally by 192 pixel rows vertically. If each possible analogue joystick reading colours a block of pixels to eventually fill the screen, each possible different reading represents a four (256/64) columns by three

Table 1

	Dec.	Hex	S
JOYSTICK(0) Right joystick horizontal	346	15A	15A
JOYSTICK(1) Right joystick vertical	347	15B	15B
JOYSTICK(2) Left joystick horizontal	348	15C	15C
JOYSTICK(3) Left joystick vertical	349	15D	15D

Dragon Logic

True or False — Logic on the Dragon explained by John Boyes

THE WAY in which the Dragon's basic interpreter deals with comparisons as part of IF statements is very interesting and, more importantly, can help the programmer open up some clever programming techniques. Most Dragon users will be aware of the logical operators AND and OR when applied to compound IF statements, eg IF A = 1 AND B = 0 OR C = 5 THEN ... <action>

but very few will be aware that these logical operators can also be used in a similar way to =, <, >, <=, >=, etc.

To understand how this is done and what the significance of this, we must first explore the way in which the Dragon deals with such entities as TRUE or FALSE.

In the above example the Dragon would first look at the expression A = 1 and decide, from the current value of A, whether in fact the expression is TRUE or FALSE (ie whether A is indeed equal to ONE or not). If TRUE, the expression is given the value -1 and if FALSE it is given the value 0.

The reason that -1 is used to denote TRUE is that it represents every binary bit set in the integer that represents the logic value.

For example, if two bytes were used to represent an integer value then the highest value it could attain would be \$FFFF.

Now, as numbers are represented in binary complement arithmetic, the most significant bit is treated as a sign bit, a binary 0 indicating a positive number and a binary 1 indicating a negative number. If we were to add one to \$FFFF we would obtain the result \$0000 because the 1 would be carried right through to bit 17. In view of the fact that we are dealing with 16-bit numbers, this 1 will roll off the end into the carry register leaving us with the result zero. Therefore \$FFFF represents one less than zero which is -1.

Getting back to our example, the second thing the Dragon would evaluate is the truth or otherwise of the expression B = 0. The next step would be to AND the two logical results of the expressions. To do this the Dragon looks at each bit of one result and compares it with the corresponding bit of the other and if both bits are set it returns the corresponding bit set in the final result word. This means that if both results were TRUE, ie -1, the AND of the two results would also be TRUE but if either were FALSE then the final result would also be FALSE. The next step would be to evaluate the expression C = 0 as FALSE (-1) or FALSE (0) and OR the result with the value already obtained from A = 1 AND B = 0. The OR operation is accomplished by comparing each bit of the two logical values but, unlike the AND, a one bit is returned if the appropriate bit in either word is set to one.

Having done all this the Dragon is left with a logical result which is either TRUE (-1) or FALSE (0) and on this basis it knows whether or not to carry out the action part of the IF statement. In actual fact the expression in an IF statement can be a single variable and the "expression" will be considered to be TRUE if the value of that variable is NOT zero. So, for example, the statement:

IF X THEN PRINT "The statement is true."
is perfectly acceptable to Dragon Basic and will cause the string to be printed for every case of X except when X = 0. This principle is particularly useful for checking joystick for buttons as follows:

```
IF NOT PEEK (85280) AND 1 THEN PRINT  
"1 PRESSED"
```

```
IF NOT PEEK (85280) AND 2 THEN PRINT  
"2 PRESSED"
```

The advantage of this method is that it automatically accounts for whether the value of the PEEK has the most significant bit set or not and is thus much easier to program than the method given in the Dragon manual.

In the above example the Dragon performed an AND between the result of peaking location 85280 and the number 1 or 2 as appropriate. This means that it can do the same thing with ordinary numbers as it did with the values given to TRUE (-1) and FALSE (0). For example if we entered PRINT 3 AND 5 the answer returned would be 1. To understand how this works the numbers should be converted to their binary form so 3 would become 0011 and 5 would become 0101 when expressed as 4-bit words or "nibbles." If we look at these two binary numbers we note that the only bit which is set in both is the least significant bit which represents the value 1 and hence this is the value returned for the expression 3 AND 5. If we took the same numbers as above and applied the OR operator we would obtain the answer 7 or 0111 because each bit is set if either or both of the corresponding bits in the two given numbers are set.

Logical operations as shown above are limited to integers (whole numbers) in the range -32,767 to -32,768. The reason for this is that the Dragon can only perform logic operations on integers up to sixteen bits (two bytes) long and even then it considers the most significant bit to be the sign bit. The significance of this is perhaps best explained by considering the NOT operator. The NOT operator returns the value which is given by changing all the ones for zeros and all the zeros for ones, this is also referred to as taking the complement of the number. For example TRUE is represented by -1 or, in binary 1111111111111111, if we NOT -1 we change all the ones for zeros and the result

would become zero which we know represents FALSE. This is of course what we would have expected because NOT TRUE must mean FALSE.

Life gets a little more complicated when we ask the Dragon to work out NOT 5. As we saw earlier, in 4-bit binary 5 would be 0101. When we take the complement of this number and replace the ones with zeros and the zeros with ones we get 1010. In practice this is just the least significant part of a sixteen-bit word and when we invert it all of the most significant bits become set to one. If we were to add 8 or binary 0110 to this result we would obtain the answer zero with a one carried right through to the 17th bit and hence ignored. The result we obtained for NOT 5 therefore was six less than zero or -6. Thus the effect of the NOT function on a decimal number is to change the sign of that number and subtract one from it.

There is another logical operator, the XOR or exclusive OR (sometimes written EOR) but this is not directly implemented on the Dragon. To understand what it is we need to look at the truth tables of AND, OR and XOR for two variables A and B. (Note that truth tables use a 1 to represent TRUE, not -1 like the Dragon).

A	B	AND	A	B	OR	A	B	XOR
0	0	0	0	0	0	0	0	0
0	1	0	0	1	0	1	1	1
1	0	0	1	0	1	1	0	1
1	1	1	1	1	1	1	1	0

From the truth tables it will be seen that the OR function includes the AND function by default when A and B are both ones, but the exclusive OR is a special case of the OR function which includes the implied AND. As an example take 3 XOR 5. As binary nibbles these are: 0011 and 0101 and the normal OR operator would result in 0111 or 7. Note, however, that the least significant bit in both numbers is set to one, because this condition would also satisfy the AND operator, it is excluded and the result becomes 0110 or 6. One way to obtain the XOR operator on the Dragon is to use an expression like: (A OR B) AND NOT (A AND B). This is a bit cumbersome so in practice one would use:

```
A OR B - (A AND B).
```

If the OR is TRUE and the AND is FALSE then the result would be -1 minus 0, which is -1 or FALSE as we would expect, but if the AND is also TRUE we would get -1 minus -1 which evaluates to zero or is logic FALSE.

The situation where the OR is FALSE and the AND is TRUE is logically impossible — think about it! Thus the minus sign is a useful shorthand way to obtain the logical expression AND NOT.

TOTAL ECLIPSE

THE ELITE OF DRAGON GAMES

What will

- * Embark on a voyage of adventure through time and space in your quest to solve the mystery of the lost shards.
- * Encounter the risks and perils of intergalactic trading, evading pirates and dodging customs officials to become the greatest wheeler-dealer in the universe.

GAME FEATURES

- * 3D Universe
- * 12 Galaxies
- * 120 Sectors
- * 720 Worlds
- * 1 Prophet (Yes, only 1, SORRY!)
- * High resolution graphics
- * Written in 100% machine code
- * Played entirely on PMODE 4 Screen
- * Arcade action pirate attacks

TOTAL ECLIPSE... simply light years ahead of any other DRAGON game

FREE UNIVERSE with every game

Magic Mazes

Program: *The Secret and the Secretor*, Blaby Software, Crossways House, Lutterworth Road, Blaby, Leicestershire LE15 9SE

WHEN a few years ago I started playing *Dungeons and Dragons* I was sure that it was an experience that would make a great computer game. But as I progressed further and further into the game I realised that it would be practically impossible to write unless it was reduced to simple terms, such as collect the treasure, and kill the monsters.

Having reached this conclusion I dropped all desire to write such a game as I thought that it would have very little ability to hold the player's interest.

Sadly, Blaby Software appears to have disagreed with me and has produced the rather simple game. The idea of the game is to wander around the maze (255 locations), collecting the three pieces of the key and then finding the locked door and escaping. To hinder your progression in this cause there are a seemingly endless string of monsters waiting in the various rooms.

The screen display is in mode 4 screen 1, and is very well done. A small frame to the left of the screen shows the view ahead of you complete with monsters, weapons, and whatever else happens to be in the room (ie food).

Two smaller frames to the right show your attack and defence weapons as icons and beneath these frames there is a list of the available options (the game is played entirely by single key strikes from lists — good news for those who hate working out the appropriate words in an adventure). A very terse description of the monster in the room (such as there is a Unicorn here) is printed underneath the main frame (no just intended) together with reports of your strength when appropriate and other bits of options.

Movement is via the arrow keys and leaving the display very confused as, if the left

arrow is pressed, the player will turn to the left and then move one square, but, if there is no door on the left wall, the player will neither move nor turn. Get it? As you can imagine this makes mapping a necessity, but also, as a side effect, extremely difficult.

As you start at a different point in the maze every game using old maps becomes more trouble than making a new one! This is at all very impressive.

The major fault with the game though is that it is very boring. There is no real strategy and, most importantly, no option to "be ingenious" — surely one of the most satisfying parts of playing role playing games.

This program bears an astounding similarity to *Star Doctor*: it's pretty and well-written but has no sustained challenge. However, as an introduction to D & D for the masochist, it may fit a gap!

Jason Choum

In the dark

Software: *The Dark Pit*, Microdial, 41 Truro Road, 91 Austin, Cornwall PL28 8DS

A CONVERSION from the Tandy, *The Dark Pit* will in fact work with the Tandy Electronic book plugged into the left joystick port, should you have such an item. Failing that, a common or garden joystick will suffice. The game itself is on the fairly familiar maze-like lines of *Tauromachia* or *Microdial's GS*, and *Commanders* game, *Land of Haec*.

It will come as a surprise to realise that the aim of the game is to escape from the dark pit itself, this comprising a number of linked rooms, each one taking up about three quarters of the screen area, with exits round the bor-

ders to other rooms. The joystick controls the inevitable little man, who runs quite gamely around, dodging the equally inevitable monsters and collecting anything he can lay his hands on. These objects are shown at the top of the screen, and can be brought into play by pressing the 1-8 keys, the items being the likes of strength, shield etc., and there are also power packs to operate these.

Also lying around are red, yellow and blue keys, and astonishingly enough these open doors of a matching colour, giving you access to new areas of the maze, and as you collect objects, naturally your score increases. There are several keys of each colour, and you can accumulate these and use them one at a time as required.

Playing the game involves moving the man round the walls and barriers on each screen, avoiding the pelting monsters and trying to reach as many of the assorted goodies as you can.

Most of the monsters move in regular patterns, and so there's plenty of looking and waiting and watching goes on, but there's also an element of *Maze Master* type strategy in working out how you reach the objects and exits. Other monsters will insist on messing things up by sensing your presence, though.

As such the game is smoothly done and is quite fun to play, but it's rather old hat and merely combines elements of other games we've all seen before, going back to *Diablo*.

It also has to be said that the collision detection is appalling, and it's far too easy to lose a life with space between you and a monster.

The screens get tougher as you go, with plenty of safety in them, so if you buy it you'll probably get your money's worth playing it, but it's nothing to get wildly excited about.

Mike Gerrard

Music Micro!

Program: *Music Master*, Golden Key Software, Industrial Estate, Dunsmuir, Devon. Price: £8.95 (tape), £9.95 (disk).

MUSIC MASTER is a utility designed to help you write and edit a tune displayed in fit-to in standard musical notation. All options are selected from the keyboard, and as there are 24 possible functions, things are rather confusing to start off with.

This is not helped by the manual which contains numerous printing errors in the table that tells you which keys to press to play each note.

After a little experimentation, the key layout becomes familiar, and entering a tune becomes a lot easier. It is then that the shortcomings of the program are revealed.

For a start, the program uses the play command and so only one note can be played at a time. This seriously limits the usefulness of the program — it does not have much educational value, and frankly it does not expand the Dragon's music potential at all for the programmer.

For the musician, several things about this program make it irritating to use.

Firstly, no shape of note symbols that rise or lower the pitch of a note are displayed on the screen, but lines cannot be displayed, and there is no facility to dump the music to a printer — a feature that might have made this program worthwhile.

To give the author his due, the program is very professional, and it does everything the manual says it does, but it is a pity that a little more thought had not gone into the program at the design stage.

David Rowntree

DRAGON DRAW

This superb lightpen-driven drawing program allows the DRAGON to receive graphics commands to be used directly from the on screen menu shown here. There are a wealth of commands available and the lightpen response is virtually instantaneous.

- 4 pen-pipes
- Dotted lines, adjustable spacing
- Shape linked brush
- 2 drawing screens
- Solid and empty boxes
- Polygons
- Freehand sketch
- Solid and shaded fill
- Pointer, Pencil, Stamp
- Save and load
- Get and Put from different screens

Datapen

LINKWORD

The Linkword is a crossword puzzle. The object being to solve words by forming words on the board using only one letter commonly associated with your preselected topic. The computer automatically generates all words for both across and across word formations, including the one and three word words. Of course you still retain control to provide for the letters may be exactly correct answers or the board. The puzzle includes bright colorful graphics with features for comparing solution results in exchanging official letters.

£9.50

BLOCKBUSTER QUIZ

All the best of the 700 games adapted for 2 players. The game consists of 100 cards each containing a wide range of topics and playing it is difficult from easy to hard. Coloured high resolution graphics are used to display the board from about a plane looking for better choices and clues for answering!

"Computerware present the quiz in an efficient and compelling way" — Dragon User, May '85

All prices include postage. Cheques, POs payable to:

PO Box 318, Stoke-on-Trent, ST6 6LX.

"Linkword seems to be an excellent program, with much enjoyment to be had from it"
Dragon User, May '85

MIKE GERRARD'S ADVENTURE TRAIL

WHERE WOULD we be without Scott Adams? In looking at his series of adventures, all centered for the Dragon Tasty recently, I've still only reached *Secret Mission*, which dates from 1979 and is said to be of an advanced level of difficulty, though I wouldn't let that put anyone off. The messy opening screen is enough to put you off before you've started, though, and I wish someone could have at least taken a little trouble to tidy it up. It reads as follows: "I am in a 3rd rifting room. Visible items: large tape recorder. Some obvious exits are: west. Welcome to Adventure Number 3 *Secret Mission* by Scott Adams. Dedicated to Maegen Adams. A minute ago someone ran out of this room! By the way, I seem to be carrying something! What shall I do?" My answer is that you put the title and dedication at the beginning, not half-way through your first locale, and it might also help if the classic could agree this was adventure number three instead of calling it number four. No-poking? Well, if a reader sent me in an adventure for evaluation and it looked like this I'd tell them to sort it out, so I don't see why Scott Adams should get away with it.

Initially there's not much of a story to go on, but if you listen to the tape recorder, you learn that you're in a nuclear reactor plant and that a saboteur is at loose. Armed with a time-bomb, the saboteur is prepared to kill himself in order to destroy the plant, and guess what? His job is to stop him! Got it in one. Attaching the messages that get left on tape recorders, isn't it? You're also told that you'll find security keys and a map in the marble envelope beside the tape recorder, but after a frustrating time trying GET MARBLE, GET MARBLE, GET MARBLE ENVELOPE, MOVE RECORDER etc, I eventually realised that the envelope must have been moved by the figure that ran out of the room a minute ago. In which case why didn't he take the incriminating tape recorder, too, which he does later (in if you leave it lying around? Perhaps you disturbed him in time, so we'll give him the benefit of the doubt on this one, but credibility is not this adventure's strongest point. Considering that you're trying to save the plant from destruction, it's amazing how hard everyone there makes this for you.

Still, one is not to reason why, the adventurer must do or die, and you're helped to do it by having a surgically implanted bomb detector on you (or is you)

which thankfully is currently glowing green, informing you that the bomb is safe. A little exploration leads to a few twisting corridors and locked doors, with nothing much lying around except for an empty plastic pail in a maintenance room. This object proves its insignificance, however, when you reach the grey room and discover a box with appendices pointed at a chain which is locked to the floor. You're told that it seems quite safe and you're invited to sit down. No thank you! Well, not straight away, though you pretty soon discover that in fact this is your only option (unless you can come up with a more imaginative use of a bucket than I could).

I won't tell you what happens in the chain, though I will tell you that there seemed to be a slight bug in the program which wouldn't let me enter any commands once I stood up again, only coming back each time with the response "Use no more than two words." I couldn't even CLIMB, but this didn't happen a second time so maybe it was just a glitch.

After a while you hear a thud somewhere in the building, and as you rush to investigate you fall over one dead saboteur. He's positively overflowing with objects, like a piece of yarn, an empty envelope, an empty pill case and more, and as well as getting all these you can even get the dead saboteur. Wandering round this dead body hanging round your neck, you should be able to get through the white door into a large white visitor's room, and while I don't want to give too much away I find the next little hurdle an even more improbable part of the story. The saboteur had an identity card on him, which has to be inspected, but without the body you won't be able to proceed as the picture on the card doesn't match your own face. However, if you happen to have with you the dead saboteur then everything's fine, as the face on the card matches the face on the dead body. Charming! Mind you, if the picture on the card is anything like most passport photos, the only face it could resemble is a dead one.

Scott Adams — out out and keep.

From here the adventure hinges on getting a correct sequence of events, and also working out the order in which you must press various coloured buttons in order to make things happen or stop them happening. From what I've seen so far, I wouldn't have thought this was notably harder than others in the series, where you sometimes even have difficulty starting, but maybe it gets tougher. Certainly worth investigating, anyway, but I'd try other Adams adventures first.

One of his other titles, of course, is *The Hulk*, and regular reader Philip Blazden of 83 Jui Lane, Biggin Hill, Kent TN30 3SE, is eagerly collecting stars in this one but doesn't know where to store them. For that you need 1504C. Philip also says he can't throw bricks high enough to reach ... something which I couldn't make out in his letter. If you can guess what it is and can help out contact Philip, whose return offers help on most of the Adventure International series.

No doubt the ears of many readers will pick up when they hear that help is available on *Spyglass*, from Ben Hall of 37 Causton Close, Hartley, Dorset, Kent DA2 3DD. There must be something in the Kent as, as it is, like Philip Blazden, has completed a vast number of adventures. Her advice on *Spyglass* will have to be posted forwards as it's quite long, but because so many of you have written in to ask how to kill the Death Vader figure I don't imagine you'll mind. Ben says you have to release the fussy to kill the huge alien in order to get the right stars. Then you can go back to the computer to release Death Vader for a practice battle, but by plunging it at the deep end and going far him straight away like managed to kill the Dark Lord at the third attempt. Just to prove it wasn't a fluke, though, she went back and did it another five times. She warns that you haven't seen the last of him, however, but if anyone's really stuck at the first hurdle then send Ben a progress it through for you. Don't forget to

also send a jiffy bag with sufficient postage for Ben to return the tape to you, otherwise she has my express permission to ignore you, so there.

Philip Dooley of Cheshire starts his letter by saying that I've got a lot to answer for. What can this be? An inspired clue, or recommending a dull adventure? No, it's just that about 12 months ago Philip was quite happy enough playing *Dorley King*, *Chuckie Egg* and others, but then he started reading the adventure column and thought he'd give them a try. Since then, total addiction, many sleepless nights and a distinct cash problem, not to mention woman trouble in *Shanagans* and *Sau Quasi*. I've sorted out Philip's woman trouble for him, but can't do much about the addiction, I'm afraid. Perhaps this column should just carry a government health warning, that reading it can seriously damage your sanity.

That must be what's happened to Dave Halliwell of Birkenhead, who wrote to say he's having trouble with that well-known adventure, *The Glop-Glorious Shepherds of Milton Keynes*. Dave says he's managed to get the long-life milk from the concrete cows, and has made some cement with it, but doesn't know what to do with the

cement or how to get rid of the town full of Zombies. He says he's also found the photo of Mrs Thatcher but can't locate the matches or sickness tablets. This column being politically neutral, I can't say whether he's on the right lines with that last one. But thanks to Dave for a letter which was certainly different and gave me quite a laugh.

Always end on a good note, they say, so for all of you who have written over the past few months to ask if I've even seen a version of the infamous *Colossal Cave Adventure* on tape for the Dragon, apart from the disk version from Compuserve, well, good news would be on the way. A machine code version, only slightly abbreviated, has been produced by a company called Cowen Software from Manchester, using their own machine code adventure writing utility. At the moment the company's trying to see if one of the larger Dragon software houses will publish it, but failing that then they'll do it themselves, and having seen a preliminary version of the game I'm sure it will appeal to lots of Dragon adventures. I won't be reviewing it till I can tell you where you can buy it, and for how much, but if you're at all interested then there's only one thing to do, as usual ... watch this space.

Adventure Contact

To help puzzled adventurers further, we are instituting an Adventure Hotline — simply fill in the coupon below, stating the name of the adventure, your problem and your name and address, and send it to Dragon User Adventure Help-

line, 12/13 Little Newport Street, London WC2H 7PP. As soon as enough entries have arrived, we will start printing them in the magazine.

Don't worry — you'll still have Adventure Trail to write to as well!

USEFUL SOFTWARE

FOR DRAGON 32/64/128
AND ORAS/8000/COMPAQ 100 2.0

Professionally written programs for home, clubs, and small business, with random access disk filing and our 60 by 24 screen with true lower case.

MONEYBOX Personal accounts **£14.95**
Controls income and expenditure etc. Optional full analysis for users with business requirements.

MAILBOX Mailing list **£18.95**
Stores names, addresses and up to 10 user-defined fields. Prints labels, letter-styles, reports, etc.

STOCK SHAREBOX Stocks and shares **£16.95**
Prints or displays share valuations, capital gains, dividends and tax credits, income forecast, price changes, share graphs (2000 shares).

SALESBOX Sales Ledger **£18.95**
Balances brought forward with cash allocated over 4 periods. Files can be read by CASHBOX.

BILLSBOX Purchase Ledger **£18.95**
Balances brought forward with cash allocated over 4 periods. Files can be read by CASHBOX.

CASHBOX General Ledger **£18.95**
Double entry accounting system. Prints trial balance, balance sheet, profit and loss, budgets, forecasts, audit trail. Reads sales/purchases.

STOCK Stock control **£18.95**
Records orders, stock changes. Prints low stock list, orders outstanding, valuation, turnover, price list, stock movements. Bulk changes prices.

ORDERBOX Invoicing **£18.95**
Prints invoices etc. on plain or pre-printed paper. Can call to 04155004 or 01455005.

The Dragon means business

Brian Cudge examines a suite of professional business programs

THE FLOUR of the Dragon in the UK market as far as games are concerned must now, sadly, be at an end. If the Dragon is to survive here it will be as a complete introductory system to professional software. This, it seems, is the view taken by London-based Compuserve, who are committed to the Dragon computer with the FLEX Junior OS-9 Operating System.

Compuserve are now marketing a complete set of small business packages to run under the OS-9 Operating System. The packages are in two volumes. Volume one contains Invoicing and Stock Recording and volume two contains Sales Ledger, Purchase Ledger and Labelling.

All the programs are intended to make up an integrated set and some share common files (such as the 'Item File'). The programs were originally coded in BASIC-65, which is also available for OS-9, and were marketed by Dragon Data. However, almost before they were released Dragon Data went down and the rest is history.

Each individual program of the package is in an separate disk, making a total of five disks for the two volumes. Running any of the programs requires the OS-9 system disk to be loaded and the RUN91 command to be entered. This sets up the 51-column display and loads in the BASIC-65 run-time package. Instructions are then displayed to change the system disk for the program disk, the particular program then autostarts.

An unfortunate feature of all this is that to change from one program to another, for example from the Sales Ledger program to the Invoicing program, the machine has to be turned on and off and the system rebooted. It is not possible to swap programs from within the package, and even using the 'CloseDown' option, which returns the OS-9 command prompt, does not help as reusing the RUN91 program tends to be unreliable. To be fair this is probably more the fault of OS-9 rather than the software, and the same package running under FLEX might not have such problems.

All of the programs are menu-driven and use the 'form-fill' approach to entering data. Generally, all of the programs use the same format, and the first thing that greets you after a fair amount of disk activity is a main options menu.

The first thing to be done with each package is the setting up of your company particulars. The program allows you to specify a company name, address, telephone number, VAT rate and so on, as well as allowing automatic linking to other packages, such as the Sales Ledger and Stock Recording from within, for example, the Invoicing system.

Briefly the various programs in the

package allow you to do the following. The Stock Recording system allows Transactions to be entered as either sales, requisitions, returns, or scrapped, for transactions issues, and for receipts as either purchases, returned requisitions, or returned sales. Once the files are set up they can be changed at the individual record level, or at the product group level. There are also quite sophisticated enquiry options. The transaction entry format is the same for all types and again is form-fill.

The Stock Recording system offers a number of reporting facilities, including stock listings and valuation, a listing of slow moving items, a reorder list, and usage history of items. Simple transaction listings can also be produced by either item, or transaction type. The reports are output to the printer. The system menu allows selection of either single sheet feed (for daily wheel), or continuous feed (for fast matrix).

The purpose of the stock recording system is really to maintain quite sophisticated records of stock and to provide genuinely useful file enquiry and statistic options.

The Invoicing system allows the entering of all invoicing details. The Customer file can be copied across from the disk used for Sales Ledger and Invoicing details can also automatically be passed to the Stock Recording and Sales Ledger programs. This is available on a single drive system, but requires a fair amount of disk swapping. It is made much simpler by the use of a double disk system.

The Invoices file can be as long as there is disk space, and can contain any number of entries for each invoice for a particular customer. Again all entry uses the form-fill approach with the lack of dynamic editing. The 'Item File' is also maintained by the Invoicing system. This contains an item number, description, sale price, and unit of measure (such as 'each' or 'per foot') for each product of the company.

Printing Invoices is quite straightforward. Following yet another (in screen menus, the user may select either plain or company headed paper, choose to print only those invoices previously unprinted, and to start and finish at particular invoice numbers.

So much for volume one of the software: volume two contains three disks — sales and purchase ledgers and labelling. The sales ledger program is based on a Financial Year of 12 periods, each either a calendar month or other period is suit the user. The programs use the OS-9 system date as the default, and also check that any other dates entered are reasonable compared to this.

Two files are used by the Sales Ledger

system — the Customer Account file, and the Transaction File. The program allows the recording and audit of transactions made between the company and customers, as well as providing VAT information and the usual file interrogation facilities. A certain amount of credit control is also available through Debt Ageing and Credit Limits.

Enquiry options include the ability to list all overdue accounts, accounts where credit limits have been exceeded, as well as company ledger summaries and company turnover analysis.

The Purchase Ledger system uses exactly the same approach as the Sales Ledger system. In addition, cash flow analysis and report facilities are available. Three files are used by the system. These are the Supplier account, the Transaction file, and the Analysis Code file. This last file contains details of the codes used within the system for analysing purchases. Some of the codes are passed to useful values, such as 10 = rent, 40 = legal expenses, but all 160 codes can be changed by the user.

Finally, the labelling system performs a fairly obvious task. The system uses only one file, the Labelling Account file, but data can also be taken from the Sales Ledger, Purchase Ledger, and Invoicing Systems. Labels can be printed selectively by category if printed from the internal Labelling Account file. The various parameters for the label types may be set up, allowing different sizes of labels.

As a complete system, this package seems really suited to the small to medium-sized business. All interaction is via clear menus and form-fill. Excellent use is made of the OS-9 51-column display throughout. It is nice to see a package written specifically for the Dragon under OS-9. The big criticism I have to make concerns the 'break key'. This is all too easy to press, and if you do you are met by an error message and the OS-9 prompt. There is no way to get back to the package except to reboot, and the files may have been left in an indeterminate state. The need for regular backups is obvious. Having said that, the system performs exceedingly otherwise, if you can stand the rather long periods of disk activity between some options, as programs are swapped in and out. Again, this is really the fault of OS-9, and not the package itself.

I have only skimmed the surface of the facilities offered by the various programs. An in-depth look at each would simply be re-writing the exceedingly laid out manuals, and would serve little purpose.

This is a very professional package, and really makes the way forward for the future of the Dragon 64 in the UK.

CUMANA

Special Price offers!

DOUBLE DENSITY DISK INTERFACE FOR THE DRAGON 32/64 AND PREMIUM QUALITY (BEAB APPROVED) DISK DRIVES FROM CUMANA.

Dragon owners — take full advantage of the speed, convenience and reliability of Cumana's 5¼" floppy disk drive systems (storage capacities of up to 1.4MB). Cumana are now offering 4 systems which come complete with a double density disk interface for the 32/64.

CS009 SYSTEM

Double density interface with Cumana's 5¼" CS009 single drive (40 track single sided 180K) £179.95

CS010 SYSTEM

Double density interface with Cumana's 5¼" CS010 single drive (80 track double sided 720K) £224.95

CD009 SYSTEM

Double density interface with Cumana's 5¼" CD009 dual drive (2 x 40 track single sided 360K) £269.95

CD010 SYSTEM

Double density interface with Cumana's 5¼" CD010 dual drive (2 x 80 track double sided — 1.4MB) £354.95

All the above include Dragon compatible DOS and controller (with utilities in ROM), instruction guide and all connecting cables. All drives include integral power supply and are approved to BS415 for electrical safety.

Other systems available — please ring us for full details.

Limited offer, all products are subject to availability. All prices are inclusive of VAT + delivery.

THE BEST PRESENT YOU CAN BUY YOUR DRAGON THIS CHRISTMAS IS.....

the dragon's claw by

UCIDEA

With the Dragon's Claw interface from Lucidea you can ADD a BBC W user port (AS WELL) AS a Commodore port to your Dragon 32 or 64 computer (WITHOUT) sacrificing your expansion port.

- With a Claw you can connect a whole range of exciting peripherals, previously only available for the BBC micro.
- Make the Sharp Dragon replacement, you can swap components, store them, activate them or process them from you file.
- This month your Dragon can take its first steps into Experimental Robotics: With the Same Controller starter kit you can control your own tank, robots or machines. (If you can try a complete three axis Robot Arm to get your ideas moving. Put an arm on the end of your Dragon's Claw and start exploring the World!

AVAILABLE NOW from J. J. GOWEN LTD.
PO BOX 128, CAMBRIDGE CB1 1DD
Tel. 0223 558888
VISA and ACCESS cards accepted.

Dragon's Claw Interface	£29.95 inc VAT (R.P. £149.95 inc VAT) (R&P)
Sharp Control	£149.95 inc VAT (R&P)
Controller + Two Sensors	£79.95 inc VAT (R&P)
Three Axis Robot Arm	£119.95 inc VAT (R&P)

TO GRAB YOUR IMAGINATION!

—+— NOW ON DISK —+— PRINTER CONTROL

Versions available for 8, 7, 6 and 5 dot printers.
Also daisywheels and electronic typewriters.

What the customer's say:
"A joy to use!"
"At the price, it's a gift!"
"Why isn't all software for this easy to operate?"

"DUMPER"

High speed — relocatable machine code program to print and merge any or all of your files screen. Available from your BASIC program — full instructions and examples supplied. Operates with or without DOS in any mode.

Currently 48 different types of printer. If you think you're No. 50 give me a ring.

PRINTER CONTROL (DRAGON 808):

£19 + £1 p&p

PRINTER CONTROL (CASSETTE):

£15 + £1 p&p

DUMPER £5.00 + 50p p&p

Please state printer type when ordering. For more than one program just take the higher p&p total.

Write or phone for free quote and advice — no obligation — all software covered by unconditional money-back guarantee!

REAL VALUE FOR MONEY SOFTWARE

Missing Memory

I HAVE purchased a 64K Dragon computer and on first item the computer shows only 32K, could you tell me how I get to the other 32K? Secondly I am in the process of developing some hardware, and would like to know which pins on the 6800a microprocessor correspond to 83 clock and VMA as on the 6800.

Mr Mark Brooke
The Knave
25, Kings Road
Whitey Bridge
Rr. Dockport
Dorchester

THE ANSWER to your first question is simple, just type **CODE** immediately after power up. Although the 6800a can interface with all 6800 peripherals and is upwards software compatible, the pin outs of the two CPUs are not identical. The 6800's '12' connection (pin 37) is similar to the 6800a's '2' connection (pin 34). The 6800a's 'VMA' (pin 5) stands for 'Valid Memory Address' and goes high when the address bus is valid. There is no direct equivalent on the 6800 — the address bus is valid on the leading edge of the '12' (pin 36) timing signal. Note that '2' is not the same as '12' on the 6800.

Following connections will work: Cassette Command

- 1) **SPIN "0" -1, "Biosense"**
- 2) **SPIN "0" -1, "Biosense"**
- 3) **INPUT α -1,A,B,A3**
- 4) **LINE INPUT α -1,A3**
- 5) **PRINT α -1,A,B,A3**
- 6) **SEP (α -1)**
- 7) **CLEAR α -1**

Disk Command to Calculate

- 1) **PR1 - "Biosense"**
- 2) **PR1 - "Biosense"**
- 3) **PR100 PR10A,B,A3**
- 4) **PR100 PR10A3**
- 5) **PR100 PR10A,"",B,"",A3**
- 6) **DOF (PR10)**
- 7) **CL500**

Man of Letters

I WAS wondering if you can help me on a problem that has arisen in respect of The Dragon and 6809.

The problem is that I would like to have a disk for the 'spellcheck' utility but I find, even following all the instructions in the 68-2 guide, I cannot locate files not associated with Spellcheck.

Gary Holmes
31 Thomas' Aquinas
London SE1

THE SPELLCHECKER program is certainly worth getting on a separate disk, the following procedure will produce a working Spell disk:

- 1) From the 680 disk use **LOAD** to load **MARKER,COPY,BUILD**
- 2) Format a blank disk
- 3) With the blank disk in drive type **MARKER CMDS** followed by **MARKER STN**
- 4) Create a file **SUPP** containing any new words using the **BUILD /680 STN SUPP** command.
- 5) Insert the 35000 disk and copy the following: **COPY /680 CMOS-SPILL /680**

CMOS-SPILL -S #32K
COPY /680 STN /680 STN
DET -S #32K
COPY /680 CMOS/COPY /680
CMOS/COPY -S #32K
COPY /680 CMOS/PR1 /680
CMOS/PR1 -S #32K
COPY /680 CMOS-PRNAME /680 CMOS-PRNAME -S #32K

Track Trouble

COULD YOU please tell me why the command **DISKET 1,1,80** does not set up a 80 TPI disk with 80 tracks? I own the double disk drives with the Dragon (68) manufactured by Dragon Data.

Mr P Robinson
172 Sheafside
Leigh
Preston
Lancashire

THE DRAGONDIS cartridge can support 80 track drives, but to format a disk to 80 tracks you must have an 80 track drive connected. The standard Dragon Data drives are only 40 track and can only format up to 40 tracks regardless of the type of disk used. It is not advisable to use the **DISKET** command as you describe as this could potentially damage the 40 track drives.

Sprites

I HAVE been writing a game in machine-code which uses 'sprites' produced by using 'exclusive or-ing' (XOR instruction). But no matter how fast I update the characters they always seem to flicker. Can you suggest why?

Phil Payne

THE REASON for the flickering graphics is that you are not synchronising the drawing and redrawing of the graphics to the Cathode Ray Tube of your TV.

If you 'move' the graphics whilst the screen is not being drawn (during the 'Frame Fly-back' of the TV) then the picture will not flicker. This is simple to achieve by adding the following few instructions before your routines to update the screen:

WAITTY LOW \$7700
ANDA #128
BIS WAITTY

What this does is to wait until 7 of location \$7700 is high — this is the 'Vsync Interval' flag and goes high when the CRT has finished drawing a screen and is returning to the top of the screen.

Hi-rise

IS THERE any way of loading a Basic program (eg a disassembler) above a machine code program? I have tried **POKEing 20** to 26 with a higher address but get 381 error when trying to RUN the Basic, whilst resaving **POKEs 20** and 26 with their original address loads the Basic.

Incidentally, I have discovered a function of the Editor not mentioned in the manual. Typing a number 'n' and 'spacebar' shows the cursor n characters along the line being edited.

Brian Borsley,
Cirencester

TO LOAD a Basic program above a machine code program I suggest you do the following:

Use the **CLEAR** statement to set top of RAM (eg **CLEAR 200, \$8000**). Now load the machine code at \$8000 onwards, then **POKE 25** and 26 with the first two bytes available after your machine code. Type in **CLEAR**. Locations 27 and 28 will now be the next values.

The reason for the **SYNTAX ERROR on RUN** is that the first byte of Basic must always be 0. Therefore you should load the first two bytes of Basic and **POKE** it with 0.

However, please note that if the program uses variables, these variables will be stored at locations pointed to by 29 and 30. If 29 and 30 point to just beneath your machine code program or any other storage area, the program may be overwritten by the variables.

Disc Commands

I HAVE just purchased a Dragon Data disk drive unit but find the accompanying manual a little vague!

Can you tell me how to convert saving and loading data routines from tape to disk? I have tried using **PR100**, **PR10A**, **PR10A3**, and **SAVE** without success. My main use is with a standard database programme and I wish to save and load data on to disk instead of tape.

John Barth
Aylesbury
Bucks.

THE MOST common cause of confusion in this area is the **PR100** command. Unlike **PR101** α -1 it does not automatically include commands between data items. For most programs the

This month we cover the control of Basic variables (simple numeric and strings). This information will be of use mainly to the programmer who wishes to add new commands/USR routines to Basic.

Variables Memory Map

The FOLLOWING locations are used by Basic for storing information regarding the state of numeric and string variables. It is not advisable to change the contents of these addresses from Basic, although they may be accessed where useful.

- 8 Variable Type Flag. Signifies the type of variable encountered; this is 0 for numeric and 255 for string.
- 27-28 Start address of simple variables table in RAM. See below for an explanation of the format of this table.
- 29-30 Start address of array table in RAM.
- 31-32 End of storage in use. This points to the last byte being used by Basic.
- 35-36 Top of free string space. Note that by subtracting the contents of 32-34 from this you can obtain the amount of free string space left and so prevent O/E errors.
- 48-50 Line number of current Data statement.
- 51-52 Address of next line in the current Data statement.
- 55-56 Pointer to variable last in use.
- 57-58 WARPTR address of variable last in use.
- 75-84 Floating Point Accumulator number one.
- 85-93 Floating Point Accumulator number two.
- 94-97 Floating Point Accumulator number two.

The WARPTR address of a variable points to the five bytes which hold the numeric value of that variable, or point to the start address of a string. It is the same address returned by the Basic WARPTR command.

The format of the variable table is as follows. Each variable entry takes up seven bytes. The first byte is always the ASCII code of the first character of the variable's name. The second byte is the ASCII code of the second character of the variable's name, or zero if the name is only one character long. For a string variable bit 7 of this byte is set (ie has 128 added to it).

The next five bytes depend on whether the variable is string or numeric. Numeric variables are stored with their binary exponent in the first byte, followed by the value of the mantissa. The most significant bit of the mantissa is set if the value is negative. For a string variable, the first of the five bytes contains the length of the string (0-255) and the third and fourth point to the start address of the string, which may

be either in the program area (for constants) or in string space.

A simple way of adding commands to basic is to use the EXEC command followed by a number of parameters, if the address of the routine is stored in a variable. For example, "GAT" if the command was to control a speech synth the format could be: EXEC \$AY,AS.

The first part of the routine needs to call the GCOM routine to skip the comma after the routine address, and from there on all the routines used by normal basic commands to evaluate strings and numbers can be used on the parameters given.

Firmware Routines for Variables

The following routines can be used for creating, accessing and deleting variables. All addresses are in decimal and are given for both the Dragon and Tandy machines.

GetExpr Dragon 34935 Tandy 45382
This routine will evaluate and put the WARPTR address of the expression which follows into locations 52-53.

GetStr Dragon 34951 Tandy 45398
Compiles a string and places it in some free string space. This routine should normally be followed by a call to GetExpr to get the address of stored string.

OKcomp Dragon 35042 Tandy 45477
Reads in the next significant character on the command line, and checks that it is a comma. If it is not then a Syntax Error is produced, otherwise the routine simply returns.

CRclsrak Dragon 35235 Tandy 45671
As for OKcomp, but checks for close bracket character '}',

CRoprnak Dragon 35239 Tandy 45674
As for OKcomp, but checks for open bracket character '{',

OKchr Dragon 35261 Tandy 45679
As for OKcomp, but checks for the character in the B register.

GetVar Dragon 35476 Tandy 45851
Gets the WARPTR address of the following variable name (not expression), and places it in locations 57-58. The variable type is placed in location 5.

GetUSR Dragon 35626 Tandy 46057
Returns the value of the argument given in a USR function as a 16 bit number in the D register.

Assign-8-bit Dragon 35884 Tandy 46203

Assigns the value in the B register to a numeric variable. This routine also returns to the basic processing loop and so should be entered at the end of a function routine, or USR routine, using a JMP.

Assign-16-bit Dragon 35885 Tandy 46203

Assigns the value in the D register to a numeric variable. Entry conditions are otherwise as for Assign-8-bit.

Assign-16-bit Dragon 35998 Tandy 46200

An alternative routine to Assign-16-bit. This assigns the value in locations 62-63 to a variable. Entry conditions are otherwise as for Assign-8-bit.

Garbage Collect Dragon 36055 Tandy 46481

Forces a controlled garbage collection of string space. This routine can be called from basic (EXEC) or machine code to control when the 'poor' occur when using large volumes of string space.

DelVar Dragon 36205 Tandy 46681
Frees the space taken up by a variable. On entry the X register must point to the WARPTR of the variable to be deleted.

Get-8-bit Dragon 36433 Tandy 46859
Returns the value of the following number in the B register. If the number evaluates to more than 8 bits then an FC error is produced.

Get-16-bit Dragon 36483 Tandy 46859

Returns the value of the following number in the X register. If the number evaluates to more than 16 bits then an FC error is produced.

This is the 5th in Brian's series on the Dragon's ROM routines. Next month he will be covering Firmware Vectors.

If you have missed any of the previous issues, they can be obtained from Dragon User, Back Issues, 12-13 Little Newport Street, London WC2H 7PP, at £1.25 each, inclusive of postage, packing and administration charges.

Just to remind you of previous months:
Sept 85 — Cassette Operating System
Oct 85 — OCS: Firmware Routines
Nov 85 — Text Manager Routines
Dec 85 — Graphics and Sound

DSDD (double select 80 track drive) and **DSDDT** (double select 80 track drive and **DSDDT** upgrades your DSDD OS-4 Operating System floppy disk to a DSDD OS-6 Operating System floppy disk. Insert the drive select and you can boot from the new OS-6 Operating System. You have now one million byte-effective disk capacity on your **DSDD** and you can read and write on standard OS-6 floppies also.

Phlegmatomani n. an ill track (phleg-mat-om-ee) driver and one who tracks
 a man who loves to drive

STEP TWO converter lets your 80 track (step rate 3mm) disc drive read and write 40 track floppy discs. Just put it on the disc flat cable. Power supply +5V via the disc flat cable from the disc controller.

Flappy Disk Drive 80 has double-sided, mag rate 2 ms, double density capacity over million bytes. **\$1,995 MS**

CAD #MODEM (dragon MODEM) telecommunication transmission program running under OS-8. CAD #MODEM will communicate with nearly any computer. Will receive line up to 83 characters (the line will slide left when 81 characters is reached. Internal buffer of app. 10,000 characters. Send/Receive Read and Binary files. Dump slugging to buffer. Examine buffer. Dump buffer to disk for later printing. Will communicate safely up to 4,000 baud at 300ms. Manual included. **C118**

We stock software and hardware for OS-9, PLUS and UNILUX.
Prices exclusive VAT. 12 months guarantee on software and hardware. Postage and packing add 10% for hardware and 5% for software. Swift cheques made payable to: DRAGON SYSTEMS.

Street, London WC2H 7PP.

WITH ANOTHER New Year upon us, here is a short routine which will display the calendar for any given month between the years 1800 and 2000. Simply input the year and month and leave the computer to do the rest. Readers with printers might like to adapt the program to print out the complete calendar for any given year.

The method on which this program is based is one that is found in a number of mathematical texts, and which calculates the day on which any given date falls. The method is as follows:

Take the last two digits of the year and add to it a quarter of its value (discarding any fraction). Then add the month value from the table below:

Jan +1 (leap year) -0	Jan +0
Feb +4 (leap year) -3	Feb +3
Mar +3	Mar +2
Apr +0	Apr +0
May +5	May +4
Jun +6	Jun +5

Now add the day of the month that you are interested in, and finally add the 'century' value from the table below:

2000 - 2000 +1	1700 - 1700 +4
1900 - 1900 +0	1600 - 1600 +3
1800 - 1800 +2	1500 - 1500 +2

When you have the total, divide by seven and note the remainder. This will tell you which day of the week the date fell (1 = Sunday, 2 = Monday, 3 = Tuesday, 4 = Wednesday, 5 = Thursday, 6 = Friday and 0 = Saturday).

In the table for the month values, note that a different figure is to be added for the months of January and February for leap years only. A year is a leap year if it is exactly divisible by four. Unfortunately, there are exceptions to this rule. The 'idea' of the leap year was introduced in 46 BC by Julius Caesar when it was noted that their 365-day year was slowly regressing with regard to the seasons. (Unfortunately, the earth's stubborn refusal to coddle the sun in an exact number of days was the cause of this irregularity — and the addition of an extra day every fourth year helped to redress the balance!) This went fine until the middle of the 16th century when it began to be noticed that the expression

were occurring 10 days too late. In effect, the Julian year was still eleven minutes too long and the cumulative effect of this was to 'add' eight days every thousand years. In 1582 Pope Gregory XIII amended the leap year rule to say that the 'century' years, although by rights leap years, should rather be regarded as 'leap', but that the 'millennium' years (e.g. 2000) should be. If you find the effect of this 'fine tuning' confusing, let me add that the year is still too long by 26 seconds, so you may like to make a note in your diaries that the year 4000 will rather be a leap year!

This New Year Competition is based on the

crossword grid in the shape of the date '1989'. Can you select values for A, B, C, D and E, such that the expressions when evaluated will fit into the grid?

Across

2. D - C
4. D + B - A
5. D + A - B
6. A
8. A + B + C
9. D
10. B
11. C

Down

1. C' - (A' + B' + C' + D' + E' + F')
3. D + A + B
12. D'
6. B'
7. A'
10. C'
11. B + B

Price

THIS MONTH we present a particularly seasonal offering, with a cross number puzzle in the shape of 1989. And up for grabs this time — 26 prizes of two resources containing a 50%-off of programs from the Metaspore House book. Enter the Dragon. Should keep you occupied well into the New Year.

Rules

TO WIN this month's prize, all you have to do is send us the solution to the above crossnumber puzzle, using the printed clues — demonstrating how you solved it. Note — please don't send us cassette containing your answer — hard copies only!

Make sure that your name and address is printed clearly on your entry, and mark your envelope 'December Competition' ... or you run the risk of disqualification.

As a tie-breaker, complete the following sentence in 10 words or less: '1989 is the Year of the Dragon because ...'

Entries must reach us by the last working day in February, with winners being announced in the April 1989 issue.

As usual, the Editor's decision is final, and no correspondence re the competition can be entered into.

Winners

The fortunate winners of our October

competition, who will be receiving copies of Magic Miner (courtesy of Software Projects) very soon are as follows:

R M Scolding of Alverstoke, P Robertson of Co Durham, G Denny of Garswood, Brian Hughes of Hounslow, E C Haines of Brith, J J Ingham of Dyfed, Rachel Edwards of Sedgford, R G Wilkinson of Warrminster, Stephen Salvin of Telford, Ken Caldwell of Rugby, P J Taylor of Arlesey, B M Chamberlain of Banbury, M McDonough of Fleetwood, A J Young of Garswood, D High of Bilton, S P Barth of Daventry, A Wilson of BPPO 106, R G Woods of Wiltshire, B Lowell of Runcorn, P D Maddocks of Tipton.

St. George now has two choices!

Red or green will slay the Dragon

- ▲ Nylon encased-Steel shafted joystick with ball and socket joint.
- ▲ Fast sprung return to centre.
- ▲ Graphite wiper linear potentiometers.
- ▲ 12 Months Guarantee.
- ▲ 7 day Money back Guarantee.

Complete control at your fingertips

The smooth control of the Voltmace delta sprung return joystick is now available to Dragon owners. Each joystick has been individually tested before it leaves our factory, following extensive robot testing to prove the design (we tested it more than a million times). This means that not only will your joystick be strong, tough and reliable, but it ensures long life, accurate control and with the choice of red or green fire buttons, gives instant recognition between the left and right joysticks.

If you are not completely satisfied with the delta 3d, return it to us within seven days for a full refund.
